Sales Prospectus – General section

Notice regarding the sales prospectus

The purchase and sale of units of investment funds discussed in this sales prospectus takes place on the basis of the respective applicable versions of the sales prospectus, the key investor information document and the General Terms and Conditions of Investment in conjunction with the Special Terms and Conditions of Investment. The General Terms and Conditions of Investment and the Special Terms and Conditions of Investment are annexed to this sales prospectus.

The sales prospectus, together with the key investor information document, the most recently published annual report and any semiannual report, must be provided free of charge to persons interested in purchasing a unit of this investment fund. Such interested persons must additionally be informed about the most recent net asset value of the investment fund.

Information or statements other than those contained in the sales prospectus must not be provided. Any purchase and sale of units on the basis of information or statements not contained in the sales prospectus or in the key investor information document shall be at the exclusive risk of the purchaser. The sales prospectus is supplemented by the most recent annual report and by any semiannual report published after the annual report.

This sales prospectus consists of a general section and of fund-specific regulations. The general section contains general regulations on the type of investment fund discussed in this sales prospectus. Special, partly restrictive and specific regulations for the relevant investment fund are set forth in the fund-specific regulations.

Selling restrictions

The units of this investment fund that have been issued may be offered for sale or sold to the public only in countries where such an offer or such a sale is permissible. Unless the Company, or a third party authorized by it, has obtained permission to do so from the local regulatory authorities, this sales prospectus does not constitute a solicitation to purchase investment fund units, nor may this sales prospectus be used for the purpose of soliciting the purchase of investment fund units.

DWS Investment GmbH and/or this investment fund are not, and will not be, registered under the United States Investment Company Act of 1940, as amended. The units of this investment fund are not, and will not be, registered under the United States Securities Act of 1933, as amended, or under the securities laws of any state of the United States of America. Accordingly, shares will not be offered or sold in the United States or to or for the account of U.S. persons. Subsequent transfers of units in or into the United States or to U.S. persons are prohibited. Prospective investors may be required to declare that they are not U.S. persons and that they are not acquiring units on behalf of, or for resale to, U.S. persons. U.S. persons are persons who are citizens or permanent residents of the United States and/or subject to taxation in the United States. Partnerships or corporations established under the laws of the United States, or those of any state, territory or possession of the United States, can also be U.S. persons.

In cases when the Company receives knowledge that a unitholder is a U.S. person or holds units for the account of a U.S. person, the Company may demand the immediate return of the units to the Company at the last determined net asset value per unit.

Investors that are considered “restricted persons” as defined in Rule 2790 of the National Association of Securities Dealers in the United States (NASD Rule 2790) must report their holdings in the investment fund to the Company without delay.

This sales prospectus may be used for sales purposes only by persons who have express written authorization from the Company (granted directly or indirectly via authorized sales agents) to do so. Declarations or representations by third parties that are not contained in this sales prospectus or in the documentation have not been authorized by the Company.

These documents are available to the public at the registered office of the Company.

Foreign Account Tax Compliance Act – “FATCA”

The provisions of the Foreign Account Tax Compliance Act (generally known as “FATCA”) are part of the Hiring Incentives to Restore Employment Act (the “HIRE Act”), which came into force in the United States in March 2010. These provisions of U.S. law serve to combat tax evasion by U.S. citizens. Accordingly, financial institutions outside of the United States (“foreign financial institutions” or “FFIs”) are obliged to make annual disclosures to the U.S. Internal Revenue Service (“IRS”), on financial accounts held directly or indirectly by “specified” U.S. persons. In general, for FFIs that do not meet this reporting obligation, a withholding tax deduction of 30% is applied to certain income from U.S. sources. The provision is being implemented gradually in the period between July 1, 2014, and 2017.

In principle, non-U.S. funds such as this fund have FFI status and must conclude an FFI agreement with the IRS if they are not classified as “FATCA-compliant” or, provided an applicable Model 1 intergovernmental agreement (“IGA”) is in effect, do not meet the requirements of the IGA applicable to their home country either as a “reporting financial institution” or as a “non-reporting financial institution.” IGA are agreements between the United States of America and other countries regarding the implementation of FATCA requirements. The Federal Republic of Germany signed a Model 1 agreement with the United States on May 31, 2013. The associated implementing regulation came into force on July 29, 2014. The fund must therefore comply with the provisions of such a German IGA from that date forward.

The Management Company will continuously examine the extent of the requirements imposed on it by FATCA and, in particular, the German IGA. It may, among other things, become necessary in this context for the Management Company to require all investors to submit the necessary documentation to prove that they are not U.S. persons in order to make it possible to determine on that basis whether they must be classified as specified U.S. persons.

Investors and intermediaries acting on behalf of investors should take note that, according to the applicable principles of the fund, units cannot be offered or sold for the account of U.S. persons and that subsequent transfers of units to U.S. persons are prohibited. If units are held by a U.S. person as the beneficial owner, the Management Company may, at its discretion, enforce a compulsory redemption of the units in question.

Investors should additionally take note that the definition of “specified” U.S. persons in the meaning of the FATCA provisions encompasses a broader range of investors than the current definition of U.S. persons.

Most important legal implications of the contractual relationship

By purchasing units, the investor becomes a joint owner, on a fractional basis, of the assets held by this fund. The investor has no control over the assets. The units do not convey voting rights.

The contractual relationship and all pre-contractual relationships between DWS Investment GmbH and the investor are governed by German law. The location of the registered office of DWS Investment GmbH shall be the place of jurisdiction for any legal claims on the part of the investor against DWS Investment GmbH arising from this contractual relationship. Investors who are consumers (see definition below) and who reside in another EU country may also bring a legal claim before a competent court in their country of residence. All publications and advertising documentation must be prepared in German or accompanied by a translation into German. DWS Investment GmbH may declare translations of the sales prospectus into the languages of those countries where units of the fund may be offered for sale to the public to be binding. Otherwise, in the event of discrepancies between the German version of the sales prospectus and any translation, the German version shall always prevail. In
additional, DWS Investment GmbH will communi-
cate with its investors entirely in German. In the
case of disputes consumers may contact the
investment funds ombudsman’s office
(“Ombudstelle für Investmentfonds”) at BVI
Bundesverband Investment und Asset
Management e.V. as the competent consumer arbitration office. DWS Investment GmbH participates in
dispute resolution proceedings before this
arbitration office.

The Ombudstelle für Investmentfonds can be
contacted at:
Büro der Ombudstelle
(Office of the Ombudsman) of BVI
Bundesverband Investment und Asset
Management e.V.
Unter den Linden 42
10117 Berlin, Germany
Tel.: +49 (0)30 – 6449046-0
Fax: +49 (0)30 – 6449046-29
E-mail: info@ombudstelle-investmentfonds.de
www.ombudstelle-investmentfonds.de

Consumers are natural persons who invest in the
fund for a purpose that is primarily related to
neither their commercial activity nor their indepen-
dent professional activity, meaning that they trade
for private purposes.

In the case of disputes arising from the application
of the provisions of the German Civil Code con-
cerning distance selling contracts involving financial
services, this is the arbitration office of the
Deutsche Bundesbank.

The office can be contacted at:
Deutsche Bundesbank
Arbitration office
P.O. Box 11 12 32
60047 Frankfurt/Main, Germany
E-mail: schlichtung@bundesbank.de
www.bundesbank.de

In the case of disputes relating to sales con-
tracts or service contracts concluded by elec-
tronic means, consumers may also contact the
EU’s online dispute resolution platform
(www.ec.europa.eu/consumers/odr). The follow-
ing email can be used as the contact address for
DWS Investment GmbH: info@dws.com. The
platform itself is not a dispute resolution office,
but instead merely puts the parties into contact
with a competent national arbitration office.

The right of recourse to the courts shall not be
affected by dispute resolution proceedings.

General principles

The investment fund (the fund)
This investment fund (hereinafter “fund”) is a
collective investment undertaking (hereinafter
“investment undertaking”), which collects capital
from a number of investors in order to invest it
according to a defined investment policy for the
benefit of those investors. The fund is an
alternative investment fund (hereinafter “AIF”) as
defined by the German Investment Code (herein-
after “KAGB”). It is managed by DWS Investment
GmbH (hereinafter the “Company”). The Company
invests the capital deposited with it in its own
name for the collective account of the investors in
the form of investment funds pursuant to the
principle of risk-spaying in assets permitted
under the KAGB, but separate from its own assets.

The assets in which the Company may invest
investor monies, and the provisions to be com-
plied with when so doing, are stated in the KAGB
and associated regulations, and in the Terms and
Conditions of Investment, which govern the legal
relationship between the investors and the Com-
pany. The Terms and Conditions of Investment
contain a general section and a special section
(“General Terms and Conditions of Investment”
and “Special Terms and Conditions of Invest-
ment”). Terms and Conditions of Investment for a
retail investment undertaking must be approved
by the German Federal Financial Supervisory
Authority (“BaFin”) prior to their application. The
fund is not part of the Company’s insolvency
assets.

Sales documentation and disclosure of
information on risk management and sales
information in accordance with MiFID 2
The sales prospectus, the key investor informa-
tion document and the Terms and Conditions of
Investment, as well as the most recent annual
and semiannual reports, are available free of
charge from the Company. The text of the Terms
and Conditions of Investment is annexed to this
sales prospectus. They can also be viewed on
the Internet at deutscham.com.

Additional information on risk management invest-
ment limitation for the fund, risk management
methods and the latest developments concerning
risks and returns of the most important categories
of assets, as well as on the composition of the
portfolio structure, are available from the Company
in electronic or written format.

Investors may also obtain additional information
on the so-called target market and on product
costs resulting from the implementation of the
provisions of Directive 2014/65/EU of the Euro-
pean Parliament and of the Council on markets
and financial instruments and the repeal of Direc-
tives 2002/92/EC and 2011/61/EU (hereinafter
referred to as “MiFID 2 Directive” or “MiFID 2”),
which the Company makes available to distribu-
tors. These are also available in text form from the
Company.

If the Company provides additional information
on the composition of the fund portfolio or its perfor-
mance to individual investors, it will simultane-
ously make this information available to all inve-
stors in the fund free of charge upon request.

Terms and Conditions of Investment and
amendments thereto
The text of the Terms and Conditions of Invest-
ment is annexed to this sales prospectus in this
document. The Terms and Conditions of Invest-
ment may be amended by the Company. Amend-
ments to the Terms and Conditions of Investment
require the approval of BaFin. Amendments to
the fund’s investment principles additionally require
the consent of the Company’s supervisory board.
Amendments to the fund’s investment principles are
only permitted on the condition that the
Company makes an offer to investors either to
redeem their units at no additional cost prior to
the amendments taking effect or to exchange
their units, free of charge, for units of investment
undertakings having comparable investment
principles, provided such investment undertakings
are managed by the Company or by another entity
belonging to its group of companies.

Any proposed amendments shall be announced in
the Bundesanzeiger (Federal Gazette) and, in
addition, in a business publication or daily newspa-
paper with sufficient circulation, or on the Inter-
net at deutscham.com. If the amendments
relate to fees and expense reimbursements that
may be charged to the fund or if they involve the
investment principles of the fund or significant
investor rights, investors shall additionally be
informed on paper or in electronic format
(so-called “durable medium”). This information
shall include the material content of the pro-
posed amendments and their background, the
rights of investors in connection with the amend-
ments, as well as a notice indicating where and
how more information can be obtained.

The earliest date on which amendments shall
come into force is on the day following their
publication. Amendments to the provisions
concerning fees and reimbursement of expenses
shall come into force no earlier than three
months after their publication unless an earlier
date has been specified with the consent of
BaFin. Amendments to the fund’s current invest-
ment principles shall likewise take effect no
earlier than three months after their announcement.

Management Company
Company name, legal form and
registered office
The Company is an asset management company
as defined by the KAGB founded on May 22,
1956, in the legal form of a company with limited
liability (Gesellschaft mit beschränkter Haftung;
GmbH). The Company’s name is DWS Investment
GmbH (prior to September 2018, Deutsche Asset
Management Investment GmbH). The Company
has its registered office at Mainzer Landstraße
11–17, 60329 Frankfurt/Main, Germany, and is
registered in Part B of the Commercial Register of
the Frankfurt/Main Local Court under the number
HRB 9135.
The Company is authorized to manage UCITS according to article 1 (2) in conjunction with articles 192 et seq. KAGB, ‘Mixed’ investment undertakings according to articles 218 et seq. KAGB, ‘Other’ investment undertakings according to articles 220 et seq. KAGB, retirement investment funds according to article 347 KAGB in conjunction with article 87 of the Investment Act in the version applicable until July 21, 2013, as well as open-ended domestic institutional AIFs with fixed terms and conditions of investment according to article 284 KAGB that invest in the assets named in article 284 (1) and (2) KAGB with the exception of the assets named in article 284 (2) (e) and (f) KAGB. In addition, the Company is authorized to manage EU investment undertakings or foreign AIFs whose permissible assets correspond to those for domestic investment undertakings.

Management and supervisory board
For further information on the management of the Company and the composition of its supervisory board, please consult the final section of this document.

Equity capital and additional own funds
The Company has capital stock in the amount of EUR 115 million (as of: December 31, 2017). The liable equity capital of the Company amounts to EUR 183.2 million (as of December 31, 2017).

The Company has accounted for the professional liability risks that arise from the management of AIFs and which are due to professional negligence by its governing bodies or employees, with own funds in the amount of at least 0.01% of the value of all AIF portfolios under management; this amount shall be reviewed and adjusted annually. These own funds are included in the disclosed liable equity capital.

Depositary
Identity of the Depositary
The credit institution State Street Bank International GmbH, whose registered office is located at Brienner Straße 59, 80333 Munich, Germany, has assumed the function of Depositary for the fund. The Depositary is a credit institution under German law.

Functions of the Depositary
The KAGB provides for a separation of the duties of management and custody for investment funds. The Depositary is a credit institution. It keeps the fund’s assets in blocked custody and cash accounts and monitors whether the Company’s use of these assets is in compliance with the provisions of the KAGB and the Terms and Conditions of Investment. The investment of assets in bank balances at another credit institution, as well as the use of such bank balances, are permissible only with the consent of the Depositary. The Depositary must grant its consent if such investment or use of assets is consistent with the Terms and Conditions of Investment and the provisions of the KAGB.

The Depositary additionally has the following duties, in particular:

- Ensuring that the issue and redemption of units, as well as the determination of the net asset value per unit, comply with the provisions of the KAGB and the Terms and Conditions of Investment;
- Ensuring that, for transactions conducted for the collective account of the investors, custody of the equivalent value is taken within the customary time limits, and that the income of the fund is used in accordance with the provisions of the KAGB and the Terms and Conditions of Investment. The Depositary must further review whether the use of blocked cash accounts or blocked custody accounts at another credit institution, a securities firm or another depositary is consistent with the KAGB and the Terms and Conditions of Investment. If this is the case, it must grant its consent to such investment;
- Ensuring that the income of the fund is used as provided for by the KAGB and Terms and Conditions of Investment;
- Monitoring borrowing by the Company for the account of the fund and, where required, consenting to such borrowing in cases other than short-term overdrafts that resulted solely from delayed credits of incoming payments;
- Ensuring that collateral for securities loans has been provided in a legally valid manner and is available at all times.

Sub-custody and conflicts of interest
The Company has received the functions and information outlined in this section “Sub-custody and conflicts of interest” from the Depositary and thus relies on the timely provision of complete and correct data and information by the Depositary.

The Depositary has appointed State Street Bank & Trust Company, with its registered office at Copley Place 100, Huntington Avenue, Boston, Massachusetts 02116, USA, as its global depositary (hereinafter “Global Depositary”) to hold foreign assets in custody. The Global Depositary in turn has delegated the custody duties to various sub-depositaries domiciled in the countries listed below so that the foreign assets may be held in custody in the relevant countries.

In the countries below, the Global Depositary has delegated the custody of the assets to the sub-depositaries listed:

**Variant 1:** No conflicts of interest are identified. Potential conflicts of interest would be mitigated by the configuration of the depositary/sub-depositary contract.

**Variant 2:** The sub-depositary is a company affiliated with the Management Company.

### Additional information

The list of sub-depositaries is current as of the date indicated on the title page of this sales prospectus. Upon request, the Company will provide investors with the most up-to-date information on the Depositary and its obligations, as well as on the sub-depositaries and on any possible and actual conflicts of interest in connection with the activity of the Depositary or the sub-depositaries. An updated list of sub-depositaries can also be found on the Internet at https://www.dws.com/footer/Legal-Resources.

* Variant 1: No conflicts of interest are identified. Potential conflicts of interest would be mitigated by the configuration of the depositary/sub-depositary contract. Variant 2: The sub-depositary is a company affiliated with the Management Company.

---

In addition to keeping actual custody of foreign securities at the foreign sub-depositary according to the laws and customs of the respective country of custody, the foreign sub-depositary additionally provides for the redemption of interest, dividend and income coupons, and for the redemption of securities repayable at maturity.

Furthermore, the sub-depositary forwards information on corporate actions relating to the foreign securities held in custody.

According to the Depositary, actual and potential conflicts of interest arising in relation to the Global Depositary at the first sub-depositary level are handled in conformity with the law. For more information, refer to the explanations below.

The Depositary has informed the Company that it handles conflicts of interest as summarized below:

The Depositary’s Compliance department is tasked with the function of the “independent body” required in accordance with article 70 (2), sentence 4, KAGB or article 85 (2), sentence 4, KAGB.

The schedule of responsibilities and the organizational structure of the Depositary comply with the statutory and regulatory requirements according to information provided to the Company and, in particular, satisfy the requirement for preventing conflicts of interest. The division that initiates lending transactions and has a vote in lending decisions (“Front Office”) and the “Trading” division up to and including the management level are therefore kept separate from the division that has an additional vote in lending decisions (“Back Office”). This separation also applies to the functions that monitor and communicate risks (“Risk Controlling”) and the functions responsible for settlement and control of lending transactions and settlement and control of trading transactions. According to information disclosed to the Company, depositary operations are also completely separate from the business units that provide services associated with collateral management, for example for securities lending transactions (“Collateral Management Services”), and carrying out fund administration insourcing activities (“KVG Backoffice Insourcing”). In cases where the duties of the asset management company are insourced, the “division solution” as defined in BaFin Circular 08/2015 (WA) on the Tasks and Duties of the Depositary or BaFin Circular 01/2017 (WA) on the Minimum Requirements on Risk Management for Investment Companies (KAMaRisk) has been implemented with regard to spatial and personnel as well as functional and hierarchical separation, according to the Depositary.

Asper information provided to the Company, the Depositary’s Conflict of Interest Policy covers the full range of conflict of interest issues from both the WpHG perspective and the depositary perspective, and prescribes the use of various methods to prevent conflicts of interest. A short summary of these is provided below:

1. Control of information flow:
   - Guidelines for Chinese Walls and their management
   - Transfer of information within the company on a strict “need to know” basis
   - Access rights to information and physical access rights to company departments. For instance, the technical systems in place currently ensure that the provision of fund administration insourcing services is completely separate from depositary services.
   - Guidelines on wall crossing
2. Separate monitoring of relevant persons.
3. No harmful dependencies in the compensationsystem.
4. Avoidance of harmful influence of an employee on other employees.
5. Avoidance of giving an employee responsibility for various activities which, if carried out simultaneously, may give rise to conflicts of interest.
6. As a last resort, notification of the affected clients of conflicts of interest not sufficiently avoidable or controllable.
Liability of the Depositary
The Depositary is generally responsible for all assets held in custody by it, or by another institution with its consent. In the case of a loss of such an asset, the Depositary is liable to the fund and its investors, unless such loss is attributable to events beyond the influence of the Depositary. For losses that are not losses of assets, the Depositary is generally only liable if it has failed to meet its obligations pursuant to the provisions of the KAGB and if such failure was at least negligent.

Risk warnings
Before making any decision to purchase units of the fund, investors should read carefully the following risk warnings together with the other information contained in this sales prospectus, and give due consideration to them when making their investment decision. The occurrence of one or more of these risks by itself or in combination with other circumstances can adversely affect the performance of the fund, or of the assets held in the fund, and may consequently have an adverse effect on the net asset value per unit. If the investor sells units of the fund on a date at which the prices of the assets contained in the fund have fallen in relation to the date at which the units were purchased, the investor will get back none or less than the full amount of the capital invested in the fund.

The investor could lose part or even all of the capital invested in the fund. Appreciation of capital cannot be guaranteed. The investor’s risk is limited to the sum invested. There is no obligation to make subsequent payments in addition to the capital invested by the investor. Aside from the risks and uncertainties described in what follows, or elsewhere in the sales prospectus, the performance of the fund might also be adversely affected by various other risks and uncertainties that are currently unknown. The order in which the following risks are listed shall not be construed as an indication either of the probability of their occurrence or of the scope or significance of the occurrence of particular risks.

Risks of investing in the
In the following, the risks typically associated with an investment in an AIF are presented. These risks can have an adverse effect on the net asset value per unit, on the capital invested by the investor and on the investor’s planned holding period for the fund investment.

Fluctuation of the fund’s net asset value per unit
The net asset value per unit is calculated as the value of the fund divided by the number of units in circulation. The value of the fund is equal to the sum of the market values of all assets held in the fund, less the market values of all liabilities of the fund. The fund’s net asset value per unit is thus dependent on the assets held in the fund and on the amount of the fund’s liabilities. If the value of these assets declines, or if the value of the liabilities rises, the fund’s net asset value per unit falls.

Impact of tax aspects on individual results
The tax treatment of income from capital assets depends on the individual circumstances of the respective investor, and may be subject to change in the future. The investor should consult his personal tax advisor on investor-specific issues – giving particular consideration to the personal tax situation.

Amendment of the investment policy and of the Terms and Conditions of Investment
The Company can change the Terms and Conditions of Investment with the approval of BaFin. A change in the terms and conditions of investment can also change regulations affecting the investor. For instance, by changing the Terms and Conditions of Investment, the Company can change the fund’s investment policy or increase the costs to be charged to the fund. The Company can additionally change the investment policy within the statutorily and contractually permissible investment spectrum, and thus without changing the Terms and Conditions of Investment and without BaFin approval. This can result in a change to the risk associated with the fund.

Suspension of the redemption of units
The Company may suspend the redemption of units under exceptional circumstances that make a suspension appear necessary when taking into consideration the interests of investors. Exceptional circumstances by this definition can be, for example, economic or political crises, exceptionally extensive redemption requests, the closing of exchanges or markets, trading constraints or other factors that adversely affect the determination of the net asset value per unit. In addition, BaFin may order that the Company suspend the redemption of units if that is necessary in the interests of the investors or the public. The investor cannot return units during such periods. The net asset value per unit can fall even when the redemption of units is suspended, as would be the case if the Company were forced to sell assets below market value during a suspension of the redemption of units. The net asset value per unit after resumption of the redemption of units can be lower than the net asset value per unit before suspension of redemption.

A suspension without subsequent resumption of the redemption of units can lead directly to a liquidation of the investment fund, as is the case when the Company terminates its management of the fund in order to then liquidate it. For the investor, this entails the risk that the planned holding period might not be realized, and that significant portions of the capital invested might not be available for an indefinite period of time or may be lost entirely.

Liquidation of the fund
The Company has the right to terminate its management of the fund. After termination of management, the Company can completely liquidate the fund. After a six-month period of notice, the right to manage and dispose of the fund passes to the Depositary. For the investor, this entails the risk that the holding period planned by the investor will not be realized. When the fund passes to the Depositary, taxes other than German income taxes may be imposed on the fund. Income taxes may be imposed on the investor when the fund units are removed from the investor’s custody account after completion of the liquidation proceedings.

Transfer of all the assets of the fund to another investment undertaking (Merger)
The Company can transfer all the assets of the fund to another retail investment fund. In this case, the investor can (i) return his units, (ii) retain his units and consequently become an investor of the receiving investment undertaking or (iii) exchange his units for units of an open-ended domestic investment undertaking having comparable investment principles, provided the Company or an entity affiliated with it manages such an investment undertaking having comparable investment principles. The same applies if the Company transfers all the assets to a UCITS. The investor must therefore, in the context of the transfer, make a new investment decision prematurily. Income taxes may be incurred when returning the units. In an exchange of units for units of an investment undertaking having comparable investment principles, the investor may be charged income taxes if, for instance, the value of the units received is higher than the value of the old units at the time of purchase.

Transfer of the fund to another asset management company
The Company can transfer the management of the fund to another asset management company. The fund remains unchanged by such transfer, as does the position of the investor. The investor must, however, decide in the context of the transfer whether the new asset management company can be considered just as suitable as the previous one. If the investor does not wish to remain invested in the fund under the new management, the units held by the investor must be returned. Income taxes may be incurred in this case.

Profitability and fulfillment of the investor’s investment objectives
No assurance can be given that the investor will achieve the desired investment performance. The net asset value per unit of the fund can fall and lead to investor losses. There are no guarantees from the Company or from third parties concerning a particular minimum payment upon redemption or a particular investment performance of the fund. An initial sales charge paid in a purchase of units, or a redemption fee paid in a sale of units, can additionally reduce or even completely consume the performance of an
investment, particularly in the case of a short investment period. Investors could receive back an amount that is lower than the amount originally invested.

Risk of negative performance of the fund (market risk)
The risks described below can affect the performance of the fund or of the assets held in the fund, and can thus also adversely affect the net asset value per unit and the capital invested by the investor.

Risks of changes in value
The assets in which the Company invests for the account of the fund are subject to risks. Losses of value can thus occur if the market value of the assets falls in relation to the purchase price, or if spot and forward prices develop differently.

Risk of negative interest on deposits
The Company invests liquid assets of the fund with the Depositary or other banks for the account of the fund, whereby the deposits earn interest at customary market rates. Depending on the development of the interest rate policy of the respective central banks – in particular of the European Central Bank, the Federal Reserve ("Fed"), the Bank of England and/or the Swiss National Bank – and depending on the respective currency of the fund or of the unit class, short-term, medium-term and even long-term deposits can attract negative interest.

Capital-market risk
The price or market performance of financial-instruments depends, in particular, on the performance of the capital markets, which in turn are affected by the overall economic situation worldwide and by the general economic and political environment in individual countries.

Risks relating to general economic conditions can be posed by uncertainty about economic growth in the most important industrial and emerging-market countries and its impact on the global economy, as well as by the sovereign debt. Capital market risks can arise from the interest rate levels prevailing in an investment environment and their potential impact on bond yields, for example. The capital markets are directly and indirectly influenced by the measures taken by different central banks (e.g., interest rate adjustments, expansive or restrictive monetary policy, programs for purchases and sales of securities) and their interactions. This can affect the liquidity, return and market risks of the fund.

Risks relating to the political environment include, for example, uncertainties about the development of the European Union, uncertainties concerning upcoming elections and referenda, and uncertainties relating to developments in (potential) crisis regions. Irrational factors such as sentiment, opinions and rumors can also have an effect on general price performance, particularly on an exchange. Fluctuations of market prices and values can also be attributable to changes in interest rates, the price of commodities such as oil, exchange rates or the creditworthiness of an issuer of financial instruments.

Risk of price changes in equities
Equities are known to be subject to strong price fluctuations and thus also to the risk of price declines. These price fluctuations are particularly influenced by the issuing company’s earnings performance and by developments in the industry and in the overall economy. The confidence of market participants in the particular company can affect price performance as well. This is especially true for companies whose shares have only been admitted to an exchange or other organized market for a shorter period of time; even slight changes in estimates can trigger strong price movements in the shares of such companies. If a particular stock is the lowest-priced of shares that trade freely and are owned by many shareholders (the so-called “free float”), even smaller buy and sell orders for that stock can have a strong impact on the market price, thus leading to higher price fluctuations.

Since January 1, 2018, the fund is partially subject to corporate income tax on its domestic income from equity investments and on other domestic income, in the sense of the limited income tax liability, not including gains on the sale of ownership interests in corporations. The tax rate is 15%.

However, the partial liability to pay corporate income tax does not apply to funds or unit classes of funds in which solely so-called tax-privileged investors are invested, as well as in the context of the reimbursement procedure provided for certain investor groups (for more information, please refer to point II. 1. of the Summary of tax regulations of importance to investors (subject, without limitation, to taxation in Germany)). However, this exemption from the liability to pay corporate income tax is only valid if the so-called 45-day rule is observed. A provision is made under this rule that, in order to avoid tax arrangements (so-called cum/cum transactions), a definitive capital gains tax is charged on dividends of German equities and income from German dividend rights similar to equities. The requirements of this 45-day rule are deemed not to have been complied with if German equities and German dividend rights similar to equities are not held by the fund for 45 days without interruption within a period of 45 days before and after the investment income was payable (± 91-day period) and the minimum risk of changes in value was not at 70% throughout that entire 45-day period. An obligation to directly or indirectly pay the investment income to another person (e.g., through swaps, securities lending transactions, repurchase agreements) also results in the levy of the investment income tax.

In this context, hedging or forward transactions that directly or indirectly hedge the risk arising from German equities or German dividend rights similar to equities may be detrimental. Hedging transactions on value and price indices are considered to be indirect hedges. The hedging transactions may also be detrimental if related parties are invested in the fund.

If the 45-day rule is not observed, the tax exemption or reimbursement of tax on domestic income from equity investments is not granted in the aforementioned cases. In such cases, the tax burden for the beneficiary investor is therefore a definitive 15% on the German gross dividend.

This can give rise to various risks. The net asset value per unit of a fund turns out to be comparatively lower if, in view of a possible tax liability of the fund, the corresponding amounts are only taken into account in the fund’s assets when the 45-day rule is complied with. Even if the tax liability does not arise, a comparatively higher net asset value per unit might not benefit the investors that were invested in the fund at the time the investment income was paid, as these amounts are only taken into account in the fund’s assets if the 45-day rule is complied with. In addition, the 45-day rule about the dividend date could lead to a sharper divergence between the buying and selling prices of the equities concerned than would otherwise have been the case, which may result in more unfavorable market conditions overall.

Risk of changes in interest rates
Investing in fixed-rate securities is associated with the possibility that the level of market interest rates existing at the time a security is issued will change. If market interest rates rise in comparison with the interest rates at the time of the issue, the prices for fixed-interest securities will fall as a rule. If, on the other hand, the market interest rate falls, the price of fixed-rate securities will rise. This price trend means that the current return on a fixed-rate security is roughly equivalent to the current market interest rate. However, these price fluctuations vary according to the (residual) term to maturity of the fixed-rate securities. Fixed-rate securities with shorter maturities are generally associated with lower price risks than fixed-rate securities with longer maturities. Conversely, fixed-rate securities with shorter maturities generally have lower returns than longer-term fixed-rate securities. Due to their short terms not exceeding 397 days, money market instruments tend to be associated with lower price risks. In addition, the interest rates of different interest-related financial instruments denominated in the same currency and with similar residual terms to maturity can perform differently.

Risk of price changes in convertible and warrant-linked bonds
Convertible and warrant-linked bonds securitize the right to convert the bond into stock, or to acquire stock. The change in the value of convertible and warrant-linked bonds is thus dependent on the
price performance of the underlying stock. The performance risk of the underlying stocks can therefore also have an effect on the performance of the convertible or warrant-linked bond. Warrant-linked bonds that give the issuer the right to issue to the investor a predetermined number of shares instead of paying back a principal amount (reverse convertibles) are dependent on the price of the corresponding stock to a greater extent.

**Risks associated with derivative transactions**

The Company may enter into derivative transactions for the fund. Buying and selling options, as well as the conclusion of futures contracts or swaps, involves the following risks:

- **Price changes in the underlying can cause a decrease in the value of the option or future.** If the value decreases to a total loss, the Company may be forced to allow the rights acquired to expire. Changes in the value of the asset underlying a swap can also result in losses for the fund.
- **The leverage effect of options may alter the price of the underlying more strongly than the direct purchase of underlyings would.** The risk of loss may not be determinable when entering into the transaction.
- **There may be no liquid secondary market for a specific instrument at a particular point in time.** In that case, it may not be possible to close a derivative position under certain circumstances.
- **The purchase of options entails the risk that the call options are not exercised because the prices of the underlyings do not change as expected, meaning that the fund loses the option premium it paid.** If options are sold, there is the risk that the fund may be obligated to buy assets at a price that is higher than the current market price, or obliged to deliver assets at a price that is lower than the current market price. In that case, the fund suffers a loss amounting to the price difference less the option premium received.
- **In futures contracts, there is a risk that the Company will be obligated, for the account of the fund, to bear the difference between the price underlying the contract when it was entered into and the market price when the transaction is closed or matures. That would result in losses for the fund. The risk of loss is not determinable when entering into the futures contract.**
- **Any necessary back-to-back transactions (long position) incur costs.**
- **Forecasts made by the Company about the future development of underlying assets, interest rates, prices and currency markets may turn out to be incorrect in retrospect.** It may not be possible to buy or sell the assets underlying the derivatives at a favorable time; conversely, it may be necessary to buy or sell them at an unfavorable time.
- **Using derivatives can result in potential losses that are not foreseeable under certain circumstances and which may even exceed the initial margins paid.**

The following risks can occur in over-the-counter ("OTC") transactions:

- **There may be no organized market, and it may therefore be difficult or impossible for the Company to sell the financial instruments acquired in the OTC market for the account of the fund.**
- **Given the individual nature of agreements, back-to-back transactions (closing of position) may be difficult or impossible, or may entail substantial costs.**

**Risks in securities lending transactions**

If the Company grants a loan of securities for the account of the fund, it transfers the securities to a borrower, which returns securities of the same kind, quantity and quality to the Company at the end of the transaction (securities loan). For the duration of the transaction, the Company has no right to use lent securities. If the security loses value during the transaction and the Company wants to dispose of the security altogether, it must terminate the lending transaction and await the customary settlement cycle, which can result in a risk of loss for the fund.

If the Company transfers securities as a loan for the account of the fund over a specific term, the securities will not be returned the Company until the agreed date, which may be up to thirty days after their transfer. Earlier termination may not be possible, or only by incurring substantial costs. This can increase the risk of loss for the fund.

**Risks in repurchase agreements**

If the Company sells securities under a repurchase agreement, it undertakes to buy them back at the end of the agreement term in return for a premium. The repurchase price and the premium to be paid by the seller at the end of the term is set when the agreement is entered into. If the securities sold under a repurchase agreement should lose value during the term of the agreement, and if the Company wanted to sell them to limit the losses of value, it can do so only by exercising the right of early termination. Early termination of the agreement can entail financial losses for the fund. It is also possible that the premium payable at the end of the term will turn out to be higher than the income the Company generated through reinvestment of the cash received.

If the repurchase agreement entered into by the Company cannot be terminated at any time, the Company may not be able to limit any losses that might occur. This can increase the risk of loss for the fund.

If the Company sells securities under a repurchase agreement, it must sell them back at the end of an agreement term. The repurchase price is set when the agreement is entered into. Securities bought under a repurchase agreement serve as collateral for providing the liquidity to the counterparty. The fund does not benefit from any increases in the value of the securities.

**Risks associated with the acceptance of collateral**

The Company receives collateral for derivative transactions, securities lending transactions and repurchase agreements. Derivatives, lent securities and securities sold under repurchase agreements can increase in value. In that case, the collateral provided might no longer fully cover the Company’s delivery or retransfer claim against the counterparty.

The Company can invest cash collateral in blocked cash accounts, in high-quality government bonds or in money market funds with short-term maturity structures. However, it is possible for the credit institution holding bank balances to default. Government bonds and money market funds can perform negatively. When the transaction is ended, the collateral thus invested might no longer be fully available, even though collateral must be returned by the Company for the fund in the amount originally granted. In that case, the Company can be obligated, for the account of the fund, to top up the collateral to the amount granted, thereby compensating for the loss incurred through the investment.

**Risks associated with the management of collateral**

The Company receives collateral for derivative transactions, securities lending transactions and repurchase agreements. The management of this collateral requires the deployment of systems and the definition of certain processes. The failure of these processes as well as human or system failure at the Company or external third parties in connection with the management of collateral may result in the risk that the collateral could depreciate or no longer be sufficient to fully cover the Company’s claim to delivery or re-transfer with respect to the counterparty.

**Risk in securitization positions with no retention**

The fund may acquire securities backed by loans (loan securitization positions) issued after January 1, 2011, only if the lender retains an interest in the securitization of at least 5% and complies with other requirements. The Company is therefore obligated to initiate corrective measures in the interests of the investors if loan securitizations issued after this date fail to meet these EU standards. As part of these corrective measures, the Company may be forced to sell such loan securitization positions. Given the legal requirements for banks, fund companies and possibly insurance companies in the future as well, there is a risk that the Company will not be able to sell such loan securitization positions held in the fund, or will be able to do so only with deep discounts or after very long delays.

**Inflation risk**

All assets are subject to a risk of devaluation through inflation. This is also true for the assets held in the fund. The rate of inflation can exceed the growth rate of the fund.
Concentration risk
Assets of the fund can be invested in a currency other than the fund currency. The fund receives the income, repayments and proceeds of such investments in that other currency. If the value of that currency falls in relation to the fund currency, the value of such investments, and thus also the value of the fund’s assets, is reduced.

Risks associated with investment in investment fund units
The risks entailed in units of other investment undertakings that are acquired for the fund (so-called “target funds”) are closely linked to the risks inherent in the individual assets contained in these target funds, and in the investment strategies pursued by these target funds. However, since the managers of the individual target funds operate independently of one another, it is also possible that several target funds will be engaged in similar or mutually opposing investment strategies. This can result in a cumulative effect of existing risks, and any opportunities might be offset. It is generally not possible for the Company to control the management of the target funds. Their investment decisions do not necessarily have to concur with the Company’s assumptions or expectations. The Company often will not have timely knowledge of the current composition of target funds. If the composition does not match the Company’s assumptions or expectations, it may not be able to react without a considerable delay by returning target fund units.

In addition, the target funds can hold investments in assets that may no longer be acquired under current law, but which may still be held if, as they were acquired under the Investment Act. This can bring about risks at the level of the target fund that will adversely affect the performance of the target fund units, and hence also the performance of the fund.

Open-ended investment undertakings in which the fund acquires units might additionally suspend the redemption of units from time to time. In that case, the Company is prevented from disposing of the units of the target fund by returning them to the management company or depositary of the target fund against payment of the redemption price.

Risks from investing in non-securitized loans
When acquiring unsecuritized loans, the Company becomes the creditor for an existing loan for the account of the fund. The possibility that the borrower of the loan may have termination, contesting or similar rights that would make the loan agreement unfavorable for the fund cannot be excluded. A potential sale of the non-securitized loans held in the fund may be possible only with high price discounts or with delays, or not at all. Income from unsecuritised loans depends on the debtor’s ability and willingness to pay. The income from the loan can thus be diminished due to unforeseen collection costs for the loan and fall short of the purchase price paid for it, or even be lost altogether.

Risks from investing in precious metals
Precious metal prices may be subject to strong fluctuations. The fluctuations can be influenced by changes in the rate of inflation or expectations of inflation in different countries and by the availability of precious metals, as well as by volume sales, investment speculation and the monetary or economic policy decisions of governments. Official restrictions can make it difficult to purchase or sell precious metals. In some jurisdictions, the possession, purchase or sale of precious metals may become officially restricted or may be subjected to additional taxes, duties or fees. The physical transfer of precious metals to and from precious-metal vaults may be restricted by the order of local authorities or other institutions. The possibility that the precious metal may be delivered or transferred only at substantially higher prices or with delays, or not at all, cannot be excluded.

Risks associated with real estate funds
The fund holds units of domestic retail real estate investment funds ("real estate funds"). The Company was permitted to acquire these for the fund under the Investment Act, and it may continue to hold them under current law. However, the Company may no longer acquire such assets for the fund. As long as the Company continues to hold these assets for the fund, the risks associated with these assets can continue to affect the performance of the fund.

By investing in real estate funds, the fund indirectly invests assets in real estate. This can also be achieved through an investment in a real estate company. In such an investment, the fund indirectly bears the risks associated with an investment in real estate. These especially include risks particular to real estate ownership such as vacancies, rent arrears and loss of rent that can result from changes in the quality of locations or the credit quality of tenants, among other things. Changes in the quality of a location may result in the location no longer being suitable for the selected use. The condition of a building may necessitate maintenance expenses that are not always predictable.

A real estate fund may also refuse and suspend the redemption of its units for a limited period if the liquid resources are no longer sufficient or are not immediately available for payment of the redemption price and for securing an orderly operation in the event of extensive redemption requests. Moreover, the acquisition of units of real estate funds is subject to a maximum investment amount. Extensive redemption requests are therefore likely to adversely affect the liquidity of the fund and require a suspension of the redemption of units. The net asset value per unit can fall when the redemption of units is suspended, as would be the case if the Company were forced to sell real estate and real estate companies below market value during a suspension of the redemption of units. The price per unit after resumption of the redemption of units can be lower than the price per unit before suspension of redemption.

Furthermore, a temporary suspension of the redemption of units may lead to a permanent one, and consequently to a liquidation of the fund, as would be the case if the liquidity required for the resumption of the redemption of units cannot be obtained through the sale of real estate. A liquidation of the investment fund can take a long time to complete, possibly several years. For the fund, this entails the risk that the planned holding period for the real estate fund might not be realized, and that potentially significant portions of the capital invested might not be available for an indefinite period of time or may be lost entirely.

The fund may redeem units of real estate funds worth up to EUR 30,000 every calendar half-year. Above this amount, the fund may redeem units of real estate funds only after a minimum holding period of 24 months and a 12-month notice of redemption. This can have a negative impact in the event of an impending suspension of the redemption of units.

Risks associated with units of investment funds with additional risks
The fund holds units in funds with additional risks and/or equities in a corresponding investment stock corporation as well as units or shares in EU or foreign investment funds (single hedge funds) comparable to such investment funds. The Company was permitted to acquire these for the fund under the Investment Act, and it may continue to hold them under current law. However, the Company may no longer acquire such assets for the fund. As long as the Company continues to hold these assets for the fund, the risks associated with these assets can continue to affect the performance of the fund. Single hedge funds are not subject to any statutory restrictions as regards the selection of acquirable assets within the scope of their investment strategies. They may sell assets that do not belong to the funds at the time of concluding the transaction (short sale). They can also use methods to increase the fund’s level of investment through borrowing, securities loans, leveraged financing embedded in derivatives or by other means (leverage). This may reduce the value of assets held in the fund. This makes it possible to generate losses in single hedge funds that greatly exceed the performance of the single hedge fund’s underlying asset.

Risks arising from the investment spectrum
In observance of the investment principles and limits stipulated in the law and in the Terms and Conditions of Investment, which provide the fund with a very wide framework, the actual investment policy can also be directed at primarily acquiring assets of only a few industries, markets or regions/countries, for example. This concentration on a few specific investment sectors can entail risks (e.g., narrow markets, broad range of fluctuation within certain
Contingent convertibles ("CoCos") are a form of hybrid financial instrument. From the perspective of the issuer, they act as a capital buffer and contribute to the fulfillment of certain regulatory capital requirements. Under their terms and conditions of issue, CoCos are either converted into shares or their principal amount is written down upon the occurrence of certain trigger events linked to regulatory capital thresholds. The conversion event can also be triggered by the supervisory authorities, independently of the trigger events and outside of the control of the issuer, if the supervisory authorities call into question the long-term viability of the issuer, or of companies related to the issuer, as a going concern (conversion/write-down risk).

Following a trigger event, the recovery of the capital invested depends essentially on the configuration of the CoCo. CoCos can use one of the following three methods to recover their fully or partially written-down nominal value: conversion into shares, temporary write-down or permanent write-off. In the case of a temporary write-down, the write-down is completely discretionary, taking into account certain regulatory restrictions. Any coupon payments after the trigger event are based on the reduced nominal restrictions. Any coupon payments after the trigger level are determined by the difference between the trigger level and the capital ratio of the CoCo issuer currently required for regulatory purposes.

The mechanical trigger is at least 5.125% of the regulatory capital ratio or higher, as set out in the issue prospectus of the respective CoCo. Especially in the case of a high trigger, CoCo investors may lose the capital invested as, for example, in the case of a write-down of the nominal value or a conversion into equity capital (shares).

At sub-fund level, this means that the actual risk of falling below the trigger level is difficult to assess in advance because, for example, the capital ratio of the issuer may only be published quarterly and therefore the actual gap between the trigger level and the capital ratio is only known at the time of publication.

b) Risk of suspension of the coupon payment (coupon cancellation risk)

Although the interest payable on the CoCo is specified by the coupon in principle, the supervisory authority can suspend the coupon payments at any time without such suspension signifying a default of the CoCo. Any lost coupon payments are not made up for when coupon payments are resumed. That means for the CoCo investor that there is a risk that not all of the coupon payments expected at the time of acquisition will be received.

c) Risk of a change to the coupon (Coupon redetermination risk)

If the CoCo is not called by the CoCo issuer on the specified call date, the issuer can redefine the terms and conditions of issue. If the issuer does not call the CoCo, the amount of the coupon can be changed on the call date.

d) Risk due to prudential requirements (risk of a reversal of the capital structure)

A number of minimum requirements in relation to the equity capital of banks were defined in CRD IV. The amount of the required capital buffer differs from country to country in accordance with the respective valid regulatory law applicable to the issuer. At fund level, the different national requirements have the consequence that the conversion as a result of the discretionary trigger or the suspension of the coupon payments can be triggered accordingly depending on the regulatory law applicable to the issuer and that an additional uncertainty factor exists for the CoCo investor, or the investor, depending on the national conditions and the sole judgment of the respective competent supervisory authority.
For further information, please refer to the statement from the European Securities and Markets Authority (ESMA/2014/944) dated July 31, 2014, regarding potential risks associated with investing in contingent convertible instruments.

**Risks of restricted or elevated liquidity of the fund (liquidity risk)**
In the following, the risks that may adversely affect the liquidity of the fund are presented. This may result in the fund being temporarily or permanently unable to meet its payment obligations, and in the Company being temporarily or permanently unable to meet the redemption requests of investors. The investor might not be able to realize a potentially planned holding period, and some or all of the capital invested might not be available to the investor for an indefinite period of time. The realization of the liquidity risks could also cause the net asset value of the fund, and thus the net asset value per unit, to decline in cases where, for instance, the Company is forced, with appropriate legal permissible, to sell assets for the fund at less than market value.

**Risk from investing in assets**
It is also permitted to acquire assets for the fund that are neither admitted to an exchange nor admitted to or included in an organized market. A potential sale of these assets may be possible only with high price discounts or with delays, or not at all. Even for assets admitted to an exchange a potential sale might not be possible, or be possible only with high price discounts, depending on the market situation, the volume, the time frame and planned costs. Although only assets that can generally be liquidated at any time may be acquired for the fund, it cannot be ruled out that it might temporarily or permanently be possible to dispose of these assets only with realization of losses.

**Risk from funding liquidity**
The Company may borrow for the account of the fund. There is a risk that the Company might not be able to get a corresponding loan, or be able to get one only at significantly more unfavorable terms. Adjustable-rate loans can additionally have a negative impact when interest rates rise. Insufficient funding liquidity can affect the liquidity of the fund, with the result that the Company may be forced to sell assets prematurely or at terms inferior than planned.

**Risks from increased redemptions or issues**
Buy and sell orders from investors cause liquidity to flow into and out of the fund, respectively. The inflows and outflows, after netting, can result in either a net inflow or a net outflow of the fund’s liquid assets. This net inflow or net outflow can cause the fund manager to buy or sell assets, which generates transaction costs. This is especially true when liquid assets exceed or fall short of a ratio set by the Company for the fund as a result of the inflows or outflows. The resulting transaction costs are charged to the fund and can adversely affect the fund’s performance. In the case of inflows, an increased fund liquidity can diminish the performance of the fund if the Company cannot invest the funds under adequate conditions.

**Risk associated with public holidays in specific regions/countries**
According to the investment strategy, investments for the fund are to be made in specific regions and countries. Local public holidays in these regions or countries may result in differences between exchange trading days of these regions or countries and the valuation dates of the fund. The fund may consequently be unable to react to market developments in these regions or countries on the same day if that day is not a valuation date, or it may be unable to act on a valuation date that is not a trading day in the markets of these regions or countries. As a result, the fund might be prevented from selling assets in time required. This can adversely affect the ability of the fund to meet redemption requests or other payment obligations.

**Counterparty risk including credit and receivable risk**
In the following, the risks that can arise for the fund in the context of a contractual relationship with another party (a so-called “counterparty”) are presented. Here there is a risk that the counterparty might no longer be able to meet its contractual obligations. These risks can affect the performance of the fund, and can thus also adversely affect the net asset value per unit and the capital invested by the investor.

**Risk of default/Counterparty risks (except central counterparties)**
The default of an issuer or of a contracting party (counterparty) against which the fund has claims can lead to losses for the fund. Issuer risk describes the effect of particular developments at the individual issuer that will affect the price of a security in addition to general trends in the capital markets. The risk of a decline in the assets of issuers cannot be entirely eliminated even through careful selection of securities. The other party to a contract entered into for the account of the fund can default in whole or in part (counterparty risk). This applies to all contracts that are entered into for the account of the fund.

**Risk from central counterparties**
A central counterparty (“CCP”) acts as an intermediary institution in particular transactions for the fund, especially transactions in derivative financial instruments. In this case, the CCP acts as the buyer toward the seller, and as the seller toward the buyer. A CCP hedges its counterparty default risks by means of a series of protective measures, including initial margins (e.g., collateralizations) that enable it to offset losses from transactions entered into at any time. These protective measures notwithstanding, it cannot be ruled out that a CCP might default, which would also affect claims of the Company for the fund, This can result in losses for the fund that are not hedged.

**Risks of default in repurchase agreements**
In repurchase agreements, the collateral is provided as consideration by the counterparty. In the event of a default of the counterparty during the term of the repurchase agreement, the Company has a right of use with respect to the securities purchased or to the cash received under the agreement. A risk of loss to the fund can ensue from the fact that the collateral provided is no longer sufficient to cover the Company’s retransfer claim in full because of the temporary deterioration in the creditworthiness of the issuer, or because the prices of the securities sold have risen.

**Risks of default in securities lending transactions**
If the Company grants a loan of securities for the account of the fund, it must obtain sufficient collateral to protect against the default of the counterparty. Collateral is provided in an amount at least equivalent to the market value of the securities transferred in the securities loan. The borrower must provide additional collateral if the value of the lent securities increases, if the quality of the collateral provided decreases or if the financial situation of the borrower deteriorates and the collateral already provided is not sufficient. If the borrower is unable to meet this obligation to provide additional collateral, there is a risk that the Company’s retransfer claim is not fully hedged in the event of a counterparty default. If the collateral is held in custody at an institution other than the Depositary, there is also the risk that the collateral might not be available for full or immediate use in the event of a borrower default.

**Operational and other risks of the fund**
In the following, the risks that can arise, for example, from inadequate internal processes and from human error or system failures at the Company or at external third parties are presented. These risks can affect the performance of the fund, and can thus also adversely affect the net asset value per unit and the capital invested by the investor.

**Risks from criminal acts, shortcomings or natural disasters**
The fund may become a victim of fraud or other criminal acts. It may suffer losses due to misunderstandings or errors by employees of the Company or of external third parties, or be damaged by outside events such as natural disasters.

**Country or transfer risk**
There is a risk that a foreign borrower, despite ability to pay, cannot make payments at all, or not on time, or can only pay in another currency, because the currency in the country of domicile is not freely transferable or the country of domicile is unwilling to execute transfers, or for other reasons. This means that, for example, payments to which the Company is entitled for the account of the fund may not occur, or may be in a currency that is not convertible (any more) due to restrictions on currency exchange, or may be in
another currency. If the borrower pays in another currency, this position is subject to the currency risk presented above.

Legal and political risks

Investments for the fund may be undertaken in jurisdictions in which German law does not apply, or where, in the case of disputes, the place of jurisdiction is outside Germany. Any resulting rights and obligations of the Company for the account of the fund may differ from those in Germany to the detriment of the fund or the investor. Political or legal developments, including changes to the legal framework in these jurisdictions, may not be detected by the Company, or may be detected too late, or they may lead to restrictions in terms of acquireable assets or assets that have already been acquired. These consequences can also arise when the legal framework for the Company and/or the administration of the fund in Germany changes.

Changes in the tax framework, tax risk

The information provided here is based on our understanding of current tax laws. It is addressed to persons subject, without limitation, to individual or corporate income tax in Germany. However, no responsibility can be assumed for potential changes in the tax structure through legislation, court decisions or the orders of the tax authorities.

In the case of a correction with tax consequences that are essentially unfavorable for the investor, changes to the fund’s taxation bases for preceding fiscal years made because these bases are found to be incorrect (e.g., based on external tax audits) can result in the investor having to bear the tax burden resulting from the correction for preceding fiscal years, even though he may not have held an investment in the fund at the time. Conversely, the investor may fail to benefit from an essentially favorable correction for the current or preceding fiscal years during which he held an investment in the fund because he redeemed or sold his units before the correction takes place.

In addition, a correction of tax data can result in a situation where taxable income or tax benefits are actually assessed for tax in a different assessment period to the applicable one and that this has a negative effect for the individual investor.

On July 26, 2016, the Investment Tax Reform Act was promulgated. Its provisions include, among other things, that certain domestic income (dividends and rents, as well as capital gains from real estate) shall be taxed at the level of the fund beginning in 2018. An exception is provided only where certain tax-advantaged institutions are investors, or where the units are held under contracts for individual retirement arrangements or basic pensions (Riester/RiRip contracts). The transparency principle, under which taxes are only imposed at the level of investor, has generally applied to date.

To compensate, the new law provides that investors will, under certain circumstances, receive a standard portion of the income generated by the fund on a taxexempt basis (so-called “partial exemption”) to offset the imposition of tax on fund level. However, this mechanism does guarantee that full offsetting will be achieved in each individual case.

Key individual risk

If the investment performance of the fund during a particular period is very positive, this success may also depend on the abilities of the individuals acting on behalf of the fund, and hence on the correct management decisions. Fund management personnel can change, however. New decision-makers might not be as successful.

Custody risk

The custody of assets, especially in foreign countries, involves a risk of loss that may result from insolvency, violation of due diligence or force majeure.

Risk from non-compliance with tax regulations for investment funds

The Investment Tax Act stipulates that by the end of the fiscal year that ends after July 22, 2016, the investment requirements and borrowing limits in accordance with the Investment Tax Act must be complied with in order for taxation as an investment fund to take place. For fiscal years beginning after July 22, 2016, the Investment Tax Act stipulates its own investment requirements. Compliance with the fiscal investment requirements is in particular dependent on whether the fund basically holds units of other funds that themselves comply with the fiscal investment requirements. The possibility that the Company materially violates the investment provisions for the fund cannot be ruled out. In the case of a material breach of the investment requirements, the fund is to be qualified for tax purposes as a capital investment company with the result that corporate income tax and trade tax are regularly incurred at the level of the capital investment company and also that the distributions at investor level are subject to taxation. In the case of taxation as a capital investment company, the overall tax burden is typically higher than in the case of taxation as an investment fund. Investors are exposed to the risk of a comparatively lower after-tax return on their investment in a capital investment company.

Risks from trading and clearing mechanisms (settlement risk)

In the settlement of securities transactions through an electronic system, there is a risk that one of the contracting parties is late or fails to pay, or fails to deliver securities on time.

Information on possible risks associated with commodity derivative position limits/ Possible effects on the investment strategy

As part of the implementation of the MiFID 2 Directive, the competent authorities shall set a quantitative threshold value for each commodity derivative traded on an exchange in a Member State of the European Union or a Contracting State to the Agreement on the European Economic Area for the maximum size of a position in that derivative which a person may hold (position limit). The position limits also apply to the fund. The operator of an exchange in which commodity derivatives are traded must establish procedures to monitor compliance with the established position limits (position management controls). Due to the defined position limits or the rights of the operator of the respective exchange within the framework of position management controls, there is a risk that positions in commodity derivatives may not be entered into at all or only partially, or that positions entered into must be liquidated or reduced. As a result, the Company may not be able to implement and adjust its investment strategy for commodity derivatives as planned. This may have an impact on the risk profile and performance of the fund.

Investment principles and limits

Assets

The Company can acquire the following assets for the account of the fund:

- Securities according to article 193 KAGB
- Money market instruments according to article 194 KAGB
- Bank balances according to article 195 KAGB
- Derivatives according to article 197 KAGB
- So-called “other investment instruments” according to article 198 KAGB
- Precious metals
- Non-securitized loans.

The Company may acquire these assets within the investment limits presented.

Details of these acquirable assets, and of the investment limits applicable to them, are presented below.

The Company may additionally hold the following assets for the account of the fund, provided they were permissible prior to the KAGB taking effect:

- Units of real estate investment funds (even after their conversion to the KAGB), as well as units or shares of comparable EU or foreign investment undertakings;
- Units of single hedge funds.

New acquisitions of these assets are not permitted.

Securities

The Company may acquire the securities of domestic and foreign issuers for the account of the fund if

1. they are admitted for trading on an exchange in a member state of the European Union (“EU”) or in another state that is a party to the Agreement on the European Economic Area
1 The list of exchanges is published on the BaFin Web site at www.bafin.de.
apply if the Company has contradictory evidence concerning the adequate liquidity of the money market instruments.

For money market instruments that are not listed on an exchange or admitted for trading in a regulated market (see nos. 3 through 6 above), the issuer or the issuer of these instruments must additionally be subject to regulations for the protection of savings and investors. Accordingly, appropriate information must be available for these money market instruments that enables an appropriate assessment of the credit risks associated with the instruments, and the money market instruments must be freely transferable. Credit risks can be evaluated, for instance, by way of a credit assessment performed by a rating agency.

For these money market instruments, the following requirements additionally apply unless they were issued or guaranteed by the European Central Bank or the central bank of a member state of the EU:

- If issued or guaranteed by the following institutions (mentioned under no. 3 above):
  - the EU,
  - the German federal government,
  - a special-purpose vehicle of the German federal government,
  - a German federal state,
  - another member state,
  - another central government authority,
  - the European Investment Bank,
  - a third country or, in the case of a federal state, one of the members making up the federation,
  - a public international body of which one or more member states of the EU are members,

appropriate information on the issue or the issuance program, or on the legal and financial situation of the issuer prior to the issue of the money market instrument, must be available.

- If issued or guaranteed by a credit institution supervised within the EEA (see no. 5 above), appropriate information on the issue or the issuance program, or on the legal and financial situation of the issuer prior to the issue of the money market instrument, must be available and updated on a regular basis and whenever a significant event occurs. In addition, data (e.g., statistics) enabling an appropriate assessment of the credit risks associated with an investment must be available on the issue or the issuance program.

Bank balances

Unless otherwise indicated in the Terms and Conditions of Investment, the Company may, for the account of the fund, hold bank balances having a term not exceeding twelve months. Such balances shall be kept in blocked accounts at credit institutions having their registered offices in a member state of the EU or in another state that is a party to the Agreement on the EEA. They may also be held at credit institutions having their registered offices in a third country having prudential rules considered by BaFin to be equivalent to those of EU legislation.

In the section "Special section – Investment objectives and strategy – Investment strategy" and in the Terms and Conditions of Investment, the minimum portion of the fund that must be held in liquid assets (e.g., bank balances or money market instruments) is presented.

Other assets and their investment limits

Other investment instruments

Unless otherwise stated in the section "Special section – Investment objectives and strategy – Investment strategy" and in the Terms and Conditions of Investment, the Company may invest no more than 20% of the fund's assets in the following other assets ("'Other' investment instruments"):

- Securities that are not admitted for trading on an exchange or included in another organized market, but which generally fulfill the criteria for securities. In contrast to traded and admitted securities, reliable valuation for these securities must be available in the form of valuation, conducted on a periodic basis that is derived from information from the issuer or from competent investment research. Appropriate information about the non-admitted or non-included security must exist in the form of regular, accurate information from the fund or, where relevant, the associated portfolio must be available.

- Money market instruments of issuers that do not meet the requirements mentioned above, provided they are liquid and their value can be accurately determined at any time.

Money market instruments are liquid if they can be sold at limited cost within an adequately short time frame. Here the obligation of the Company to redeem units of the fund at the request of investors and, to that end, to be able to sell such money market instruments correspondingly quickly, must be taken into account. In addition, an accurate and reliable valuation system must exist for money market instruments that enables the determination of the net asset value of the money market instrument and is based on market data or on valuation models (including systems based on amortized costs). The liquidity requirement for money market instruments is deemed met if they are admitted for trading or included in an organized market within the EEA, or if they are admitted for trading or included in an organized market outside the EEA, insofar as BaFin has approved the choice of this market.

- Newly issued equities if, according to their terms of issue,
  - their admission for trading on an exchange in a member state of the EU or in another state that is a party to the Agreement on the EEA or their admission to an organized market or their inclusion in such a market in a member state of the EU or in another state that is a party to the Agreement on the EEA must be applied for under the terms of issue, or
  - their admission for trading on an exchange in or in an organized market, or their inclusion in such a market, outside the member states of the EEA or of these other states that are parties to the Agreement on the EEA must be applied for under the terms of issue, insofar as BaFin has approved of the choice of exchange or organized market;
  - provided that the admission or inclusion takes place within one year of their issue.

- Promissory note loans ("Schuldscheindarlehen") that can be assigned at least twice following acquisition for the fund and which were granted to one of the following institutions:
a) the German federal government or a special-purpose vehicle thereof, an EU country or an OECD member country,
b) another domestic authority, regional government or local authority of another member state of the EU or another state that is a party to the Agreement on the EEA, provided that the receivable can be treated, according to the regulation on prudential requirements for credit institutions and investment firms, in the same manner as a receivable from the central government on whose sovereign territory the regional government or local authority is located,
c) other corporate bodies or institutions under public law domiciled in Germany or in another member state of the EU, or in another state that is a party to the Agreement on the EEA,
d) companies that have issued securities that have been admitted for trading in an organized market within the EEA or which have been admitted for trading in another regulated market as defined by the directive on markets for financial instruments, as amended, or
e) other borrowers, provided that one of the bodies designated in (a) through (c) above has undertaken to guarantee the payment of interest and repayment of principal.

Precious metals

The precious metals that may be acquired for the account of the fund and the total portion of the fund’s assets that may be invested in precious metals are provided in the section “Special section – Investment objectives and strategy” and in the Terms and Conditions of Investment.

Non-securitized loans

Furthermore, non-securitized loans may be acquired for the account of the fund. This means that the Company becomes creditor of an existing loan and can demand interest payments and repayment of the loan amount from the borrower for the account of the fund. Non-securitized loans are loans for which no negotiable securities were issued. Loans packaged into securities, e.g., bonds, can only be held as securities within the confines of the permissible limits (see section “Investment principles and limits – Assets – Securities”). Loans for which a promissory note was issued can only be acquired as ‘Other’ investment instruments subject to the conditions specified for such instruments (see section “Investment principles and limits – Other assets and their investment limits – ‘Other’ investment instruments”).

A description of the non-securitized loans and the total portion of the fund’s assets that may be invested in these receivables is provided in the section “Special section – Investment objectives and strategy” and in the Terms and Conditions of Investment.

Investment limit for precious metals, non-securitized loans and certain derivatives

No more than 30% of the fund’s assets in total may be invested in precious metals, non-securitized loans and certain derivatives. This investment limit covers derivatives that are not based on assets that may be acquired for the fund. Also included in the limit are derivatives that are not based on one of the following underlyings:

- Interest rates
- Exchange rates
- Currencies
- Financial indices that are sufficiently diversified, represent an adequate benchmark for the market to which they refer, and are published in an appropriate manner.

The investment limit further covers promissory note loans that may be acquired for the fund as ‘Other’ investment instruments (see section “Investment principles and limits – Other assets and their investment limits – ‘Other’ investment instruments”).

Investment limits for tax reasons

If the fund has been designed as an equity fund or mixed fund for tax purposes, this is disclosed in the section “Special section – Investment strategy”.

Investment limit for equity interests in corporations in the form of securities, business ownership interests and ‘Other’ investment instruments

When it acquires certain assets that may be acquired for the account of the fund as securities or ‘Other’ investment instruments, the Company becomes a part owner of a corporation (such as a stock corporation or a limited-liability company). Such an equity interest in a corporation can result, for example, from the acquisition of an exchange-listed stock. In addition, the Company’s investment in a corporation may also result from business ownership interests in the portfolio which may be retained by the Company (see section “Investment principles and limits – valuation – special rules for the valuation of individual assets – Business ownership interests”). The total ownership interest held in a corporation for the account of the fund in the form of securities, business ownership interests and other investment instruments must in such cases be less than 10% of the equity of the respective business. This also applies to direct investments via a partnership. This restriction shall not apply to equity interests in companies whose purpose is directed at the generation of energy from renewable sources and defined by the German Renewable Energy Sources Act. Under that law, renewable energy sources include wave power, tidal power, salt gradient and flow energy, wind energy, solar radiation, geothermal energy, energy from biomass including biogas, biomethane, landfill gas and sewage treatment gas, as well as the biodegradable fraction of municipal waste and industrial waste.

Derivatives

The Company may conduct transactions with derivatives for the fund as part of the investment strategy. This includes derivative transactions for efficient portfolio management and for achieving additional income, i.e., also for speculative purposes. That can increase the risk of loss in the fund at least temporarily.

A derivative is an instrument whose price depends on the price fluctuations or expected prices of other (“underlying”) assets. The following discussion concerns both derivatives and financial instruments with derivative components (hereinafter collectively “derivatives”).

The market risk of the fund may not be more than doubled through the use of derivatives (“market risk limit”). Market risk is the risk of loss arising from fluctuations in the market values of assets held in the fund that are attributable to changes in variable market prices and rates such as interest rates, exchange rates and the prices of equities and commodities, or to changes in the creditworthiness of an issuer. The Company must comply with the market risk limit on an ongoing basis. It must determine on a daily basis the extent to which the market risk limit has been reached as provided for by law, specifically the Regulation on Risk Management and Risk Measurement when using Derivatives, Securities Loans and Repurchase Agreements in Investment Undertakings according to the German Investment Code (hereinafter “Derivatives Regulation”).

Precise details on which derivatives the Company may acquire for the account of the fund, and on the method being used for determining the extent to which the market risk limit has been reached, are presented in the section “Special section – Derivatives.”

Futures contracts

Futures contracts are agreements that unconditionally bind both parties to buy or sell a particular amount of a certain underlying at a predetermined price at a certain point in time, at maturity or within a certain period. The Company may, within the scope of the investment principles, enter into futures contracts for the account of the fund on assets acquirable for the fund, as well as on interest rates, exchange rates, currencies and qualified financial indices.

Options

In options transactions, a third party is granted, in exchange for a consideration (option premium), the right to demand delivery or acceptance of assets during a specific period of time or at the end of a specific period at a predetermined price (strike price), or to demand payment of a cash settlement, or to acquire corresponding options. The Company may take part in options transactions for the account of the fund within the scope of the investment principles.
Swaps
Swaps are exchange contracts in which the parties swap the cash flows or risks underlying the respective transaction. The Company may enter into interest rate swaps, currency swaps, equity swaps and credit default swaps for the account of the fund within the scope of the investment principles.

Swaptions
Swaptions are options on swaps. A swaption is the right, but not the obligation, to conduct a swap transaction, the terms of which are precisely specified, at a certain point in time or within a certain period. In all other aspects, the principles established for options apply. The Company may only conclude swaptions for the account of the fund that consist of the options and swaps described above.

Credit default swaps
Credit default swaps are credit derivatives that enable the transfer of a volume of potential credit defaults to other parties. As compensation for accepting the credit default risk, the seller of the risk pays a premium to its counterparty.

In all other aspects, the information for swaps applies accordingly.

Total return swaps
A total return swap is a derivative in which one counterparty transfers to another counterparty the total return of a reference liability including income from interest and fees, gains and losses from price fluctuations, and credit losses. Total return swaps are entered into for the fund for efficient portfolio management. In principle, all of the assets of the fund may be the object of total return swaps. The Company reserves the right, depending on the respective market conditions, with the objective of efficient portfolio management and in the interests of the investors, to actually transfer all of the assets held in the fund by way of a total return swap. Both positive and negative income from total return swaps is fully taken into account in the fund’s assets.

Securitized financial instruments
The Company may also acquire for the account of the fund the financial instruments described in the preceding if they are securitized. It is also possible for the transactions involving financial instruments to be only partly securitized (as in the case of warrant-linked bonds). The statements on opportunities and risks apply accordingly to such securitized financial instruments, but with the condition that the risk of loss in the case of securitized financial instruments is limited to the value of the security.

OTC derivative transactions
The Company may conduct for the account of the fund both those derivative transactions admitted for trading on an exchange or admitted to or included in another organized market and so-called over-the-counter (“OTC”) transactions.

The Company may conduct derivative transactions that are neither admitted for trading on an exchange nor admitted to or included in another organized market only with suitable credit institutions or financial services institutions on the basis of standardized master agreements. For derivatives traded other than on an exchange, the counterparty risk of a contracting party is limited to 5% of the fund’s assets. If the counterparty is a credit institution having its registered office in a member state of the EU, in another state that is a party to the Agreement on the EEA or in a third country with a comparable level of supervision, the counterparty risk may amount to 10% of the fund’s assets. Derivative transactions conducted other than on an exchange where the counterparty is the central clearinghouse of an exchange or another organized market are not included when determining counterparty limits if the derivatives are marked to market daily, with a daily margin settlement. However, amounts due to the fund from an intermediary trader are attributed to these limits, even if the derivative is traded on an exchange or in another organized market.

Investment fund units

Units of UCITS and ‘Mixed’ investment funds
In the section “Special section – Investment objective and strategy – Investment strategy” and in the Terms and Conditions of Investment, the extent to which the Company can invest for the account of the fund in units of ‘Mixed’ investment funds and ‘Other’ investment funds (including those in the legal form of the investment stock corporation with variable capital) and in comparable open-ended foreign investment undertakings (“‘Other’ target funds”) is presented. These can in turn acquire securities, money market instruments, bank balances, derivatives, units of other investment undertakings, precious metals and non-secured loans.

The Company predominantly acquires units in investment undertakings with registered offices in all states that are parties to the Agreement on the European Economic Area and the G20 for the fund.

These can additionally engage in short-term borrowing of up to 20% of the fund’s assets if the borrowing conditions are customary in the market, and if the Depositary grants its consent. The risks associated with borrowing are presented in the section “Risk warnings – Risk from funding liquidity.”

Comparable foreign investment undertakings may be acquired only if their assets are held in custody by a depository or a prime broker, or if the functions of the depository are discharged by another comparable institution. The Company may not invest in foreign investment funds from countries that do not cooperate in combating money laundering as defined in international agreements.

In the section “Special section – Investment objective and strategy – Investment strategy,” the level of protection for investors must be equivalent to that provided for investors in a domestic UCITS, especially as regards separation of custody of assets, borrowing, lending and short sales of securities and money market instruments.

The business activity of the target fund must be reported in annual and semiannual reports and allow investors to make their own assessment of the assets and liabilities, income and operations over the reporting period.

The target fund must be an open-ended retail fund in which the number of units is not limited and where investors have the right to redeem units at any time.

Units of ‘Other’ investment funds
In the section “Special section – Investment objective and strategy – Investment strategy” and in the Terms and Conditions of Investment, the extent to which the Company can invest for the account of the fund in units of ‘Other’ investment funds and ‘Other’ investment funds (including those in the legal form of the investment stock corporation with variable capital) and in comparable open-ended foreign investment undertakings (“‘Other’ target funds”) is presented. These can in turn acquire securities, money market instruments, bank balances, derivatives, units of other investment undertakings, precious metals and non-secured loans.

The Company predominantly acquires units in investment undertakings with registered offices in all states that are parties to the Agreement on the European Economic Area and the G20 for the fund.

These can additionally engage in short-term borrowing of up to 20% of the fund’s assets if the borrowing conditions are customary in the market, and if the Depositary grants its consent. The risks associated with borrowing are presented in the section “Risk warnings – Risk from funding liquidity.”

Comparable foreign investment undertakings may be acquired only if their assets are held in custody by a depository or a prime broker, or if the functions of the depository are discharged by another comparable institution. The Company may not invest in foreign investment funds from countries that do not cooperate in combating money laundering as defined in international agreements.
In addition, the Company may invest a total of no more than 30% of the investment fund’s assets in units of “Other” investment funds that may be held by the Company (see section “Investment objectives, strategy, principles and limits – Assets – Units of real estate funds and single hedge funds”). The redemption of units of “Other” target funds might only be possible on specific dates if the total value of an investor’s redemption order exceeds a certain amount. In such a case, the Company must submit the redemption order in writing, giving a specific period of notice. The Company cannot revoke such a redemption order.

Units of real estate funds and single hedge funds
Since the KAGB took effect on July 22, 2013, certain acquisitions were permitted under the Investment Act can no longer be acquired for the fund.

They are

- Units of real estate investment funds, as well as units or shares of comparable EU or foreign investment undertakings, (“real estate fund units”), and
- Units of single hedge funds. However, if the Company acquired real estate fund units or single hedge fund units before July 22, 2013, it may continue to hold them for the fund if their acquisition was permitted under the fund’s Terms and Conditions of Investment applicable on the acquisition date.

Under the aforementioned conditions, the Company may continue to hold for the fund the types of real estate fund units and single hedge fund units that are described in more detail in the section “Special section – Investment objective and strategy – Investment strategy” and in the Terms and Conditions of Investment. These are predominantly domiciled in member states of the EU, the EEA and the G20.

Informing investors in the event of suspension of the redemption of target fund units
Target funds can temporarily suspend the redemption of units to the extent permitted by law. In that case, the Company will not be able to return the target fund units to the management company or depositary of the target fund against payment of the redemption price (see also the section “Risk warnings – Risks associated with investment in investment fund units”). The extent to which the fund holds units of target funds that have currently suspended redemptions, if any, is posted on the Company’s Web site at deutschem.com.

Securities lending transactions
All of the securities held in the fund may, for the purpose of achieving additional income, be transferred as a loan to third parties in exchange for appropriate market consideration. In so doing, all of the fund’s securities holdings can be transferred as a loan to third parties for definite or indefinite periods. The Company reserves the right, depending on the respective market conditions and with the objective of fully exploiting the income potential in the interests of the investors, to actually transfer all of the securities held in the fund by way of a loan. An overview of the current extent to which the securities have been transferred by way of a loan can be found on the Web site deutschem.com. If securities are transferred for an indefinite period, the Company has the option to terminate the lending transaction at any time. If securities are transferred for a definite period, the securities must be returned no later than 30 days after the transfer. The value of the securities to be transferred, together with the value of those securities already transferred for a specific period, may not exceed 15% of the fund’s assets on the date of the transfer. It must be contractually agreed that the securities of the same kind, quality and quantity will be returned to the fund within the customary settlement period following the ending of the lending transaction. A requirement for the transfer of securities as a loan is that the fund must be provided with sufficient collateral. For this purpose, balances may be assigned or pledged, and securities or money market instruments may be transferred or pledged. The fund is entitled to withdraw the value of those securities already transferred to any one borrower may not exceed 10% of the fund’s assets.

If external companies are involved in the execution of securities loans, this fact will be disclosed in the “Service Providers” section.

The Company may not grant money loans to third parties for the account of the fund.

Repurchase agreements
The Company may, for the purpose of achieving additional income and for short-term secured investment for the account of the fund, enter into repurchase agreements having a maximum maturity of twelve months with credit institutions and financial services institutions. In so doing, it can both transfer all of the securities of the fund to a transferee in exchange for a consideration (simple repurchase agreement) and accept securities within the scope of the respectively applicable investment limits against cash (reverse repurchase agreement). The Company reserves the right, depending on the respective market conditions and with the objective of fully exploiting the income potential and of making a secured investment in the interests of the investors, to actually transfer all of the securities or cash held in the fund by way of a repurchase agreement. If a simple repurchase agreement is terminated, the Company has the right to demand the return of the securities transferred under the agreement. The termination of a reverse repurchase agreement can result in the refund of either the entire sum of money or the accrued sum of money in the amount of the current market value. Repurchase transactions are only permitted in the form of so-called “genuine” repurchase agreements. In these transactions, the transferee assumes the obligation to retransfer the securities on a fixed date or on a date to be determined by the transferor, or to pay back the sum of money with interest.

Choice of counterparty
The conclusion of OTC derivative transactions, including total return swaps, securities lending transactions and repurchase agreements, is only permitted with credit institutions or financial services institutions on the basis of standardized master agreements. The counterparties must be subject to ongoing supervision by a public body, be financially sound and have an organizational structure and the resources they need to provide the services. In general, all counterparties have their headquarters in member countries of the Organisation for Economic Co-operation and Development (OECD), the G20 or Singapore. In addition, either the counterparty itself or its parent company must have an investment grade rating by one of the leading rating agencies.

Collateral strategy
As part of derivative transactions, securities lending and repurchase agreements, the Company accepts collateral for the account of the fund. The purpose of the collateral is to fully or partially reduce the risk of default of the counterparty to these contracts.

Types of permissible collateral
In derivative transactions, securities lending and repurchase agreements, the Company will accept the following assets as collateral, or as assets that meet the following prerequisites:

1. This collateral shall have been received before or at the time of the transfer of the lent securities in the case of a securities lending transaction. If the securities are lent via intermediaries, the transfer of the securities can take place before receipt of the collateral as long as the respective intermediary ensures the orderly completion of the transaction. Such intermediary can provide collateral in place of the borrower.

2. In general, collateral for securities lending transactions, reverse repurchase agreements and transactions with OTC derivatives (not including currency futures) must be provided in one of the following forms:

   - liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not currently suspended redemptions, if any, is posted on the Company’s Web site at deutschem.com.
Diversification of collateral

Collateral that is not provided in the form of cash or units of UCIs/UCITS must have been issued by a legal entity that is not affiliated with the counterparty.

Diversification of collateral

Collateral that is provided must be adequately diversified in terms of issuers, countries and markets. The criterion of adequate diversification is considered to be fulfilled if the fund receives from a counterparty, for efficient portfolio management or for transactions with OTC derivatives, a collateral basket whereby the maximum total value of the open positions with respect to a particular issuer does not exceed 20% of the net asset value. If the fund has various counterparties, the various different collateral baskets should be aggregated to calculate the 20% limit for the total value of the open positions with respect to an individual issuer.

Scope of collateralization

Securities lending transactions are fully collateralized. The price of the securities transferred in the securities loan, along with the associated income, constitutes the secured value. The value of the collateral provided by the borrower may not be less than the secured value plus a market premium. Moreover, derivatives, securities lending and repurchase agreements must be collateralized to an extent that will ensure that the amount attributable for the risk of default of the respective counterparty does not exceed 5% of the fund’s assets. If the counterparty is a credit institution having its registered office in a member state of the EU or in another state that is a party to the Agreement on the EEA or in another member state of the European Union or on an exchange in an OECD member country, as long as these equities are contained in a major index.

3. Collateral that is not provided in the form of cash or units of UCIs/UCITS must have been issued by a legal entity that is not affiliated with the counterparty.

General collateral valuation rules

The Company (or its representatives) perform a daily valuation of the collateral received. Should the value of collateral previously pledged appear to be insufficient in view of the amount to be covered, the counterparty must provide additional collateral at very short notice. If appropriate, safety margins shall apply to take into account the exchange-rate or market risks associated with the assets accepted as collateral.

Collateral that is admitted for trading on an exchange or admitted to or included in another organized market is valued at the previous day’s closing price or, if it is already available at the time the valuation takes place, at the closing price of the same day. The valuation is performed in such a way as to obtain a value for the collateral that is as close as possible to the market value.

Strategy for discounting valuations (haircut strategy)

The Company has a strategy for applying valuation discounts on financial assets that are accepted as collateral (so-called “haircut strategy”). Haircuts on collateral are based on:

a) the credit quality of the counterparty,
b) the liquidity of the collateral,
c) the price volatility of the collateral,
d) the credit quality of the issuer, and/or
e) the country or market in which the collateral is traded.

Collateral that is provided within the framework of OTC derivative transactions, e.g., short-term government bonds with first-class ratings, is generally subject to a minimum haircut of 2%. Consequently, the value of such collateral must exceed the value of the collateralized claim by at least 2% so that an overcollateralization of at least 102% is reached. A correspondingly higher haircut of currently 33% (and therefore a higher overcollateralization of 133%) applies for securities with longer maturities or securities of issuers with lower ratings. Overcollateralization for OTC derivative transactions is generally within the following ranges:

Overcollateralization ratio 102% to 133%

For securities lending transactions, the application of a collateral-specific haircut can be waived if the credit quality of the counterparty and the collateral is excellent. However, for equities with lower ratings and other securities, higher haircuts may apply depending on the credit quality of the counterparty. Overcollateralization for securities lending transactions is generally within the following ranges:

Prescribed overcollateralization rate for government bonds with a first-class rating 103% – 105%

Prescribed overcollateralization rate for government bonds with a low investment-grade rating 103% – 115%
The AIF’s risk is calculated using both the so-called “gross method” and the so-called “commitment method.” In both cases, the risk is the total of the absolute values of all of the AIF’s positions, which are valued as provided for by law. The commitment method differs from the gross method in that individual derivative transactions or securities positions are offset against each other in the commitment method (taking netting and hedging agreements into account).

The Company can use leverage for the fund up to the market risk limit (see section “Investment principles and limits – Assets – Derivatives”).

The Company expects, unless otherwise provided for in the section “Fund-specific regulations – Derivatives,” that the risk of the AIF calculated using the gross method will not exceed its net asset value by more than 5 times, and that the risk of the AIF calculated using the commitment method will not exceed the risk calculated using the gross method and, accordingly, amount to no more than 3 times its net asset value.

Depending on market conditions, however, leverage can fluctuate, and the indicated maximum leverage may therefore be exceeded in spite of constant monitoring by the Company.

The Company uses the value-at-risk method to calculate the market risk limit for the use of derivatives. More precise information on this can be found in the section “Special section – Derivatives.”

Valuation
General asset valuation rules
Assets admitted for trading on an exchange/traded in an organized market
Assets that are admitted for trading on an exchange or admitted to or included in another organized market, as well as subscription rights for the fund, are valued at the most recent available trading price permitting reliable valuation, unless otherwise provided for in the following section “Investment principles and limits – Valuation – Special rules for the valuation of individual assets.”

Assets not listed on exchanges nor traded in organized markets, or assets having no trading price
Assets that are neither admitted for trading on exchanges nor admitted to or included in another organized market, or for which there is no trading price, are valued at the current market value deemed appropriate on the basis of a careful assessment using suitable valuation models and taking into consideration current market conditions, unless otherwise provided for in the following section “Investment principles and limits – Valuation – Special rules for the valuation of individual assets.”

Special rules for the valuation of individual assets
Unlisted bonds and promissory note loans
For the purposes of valuing bonds that are neither admitted for trading on an exchange nor admitted to or included in another organized market (e.g., unlisted debt instruments, commercial papers and certificates of deposit) and for the valuation of promissory note loans (“Schuldscheindarlehen”), the market prices agreed for comparable bonds and note loans and, if applicable, the market prices of bonds of comparable issuers and with equivalent maturities and interest rates are used, less a discount to compensate for limited marketability, if necessary.

Money market instruments
Money market instruments are valued at the prevailing market rates.

Options and futures contracts
Options belonging to the fund and liabilities from options granted to third parties that are admitted for trading on an exchange or admitted to or included in another organized market are valued at the most recent available trading price permitting reliable valuation. The same applies with respect to amounts receivable and payable under futures contracts sold for the account of the fund. The initial margins charged to the fund are included in the value of the fund, taking into account the gains and losses in valuation established on the day of trading.

Swaps
Swaps are valued at the market value deemed appropriate on the basis of a careful assessment using suitable valuation models and taking into consideration overall circumstances.

Bank balances, other assets, liabilities, time deposits, investment fund units and loans
Bank balances and certain other assets (e.g., interest receivable), receivables (e.g., accrued interest receivable) and liabilities are generally measured at their nominal value plus accrued interest. Time deposits are valued at their market value, provided that the time deposit may be canceled at any time and repayment is not at nominal value plus interest.

Units of investment undertakings are generally recognized at the most recently determined redemption price or at the most recent available trading price permitting reliable valuation. If these values are not available, units of investment funds are valued at the current market value deemed appropriate on the basis of a careful assessment using suitable valuation models and taking into consideration current market conditions.

Repayment claims arising from lending transactions are governed by the applicable price of the assets transferred as loans.

Business ownership interests
For assets having the characteristics of a commercial ownership interest, the purchase price including incidental acquisition expenses is recognized as the market value at the time of acquisition. The value of these assets must be remeasured no later than twelve months after acquisition or after the last valuation and recognized as the fair value. Notwithstanding the preceding, the value must be remeasured if the most recently recognized value is no longer appropriate due to changes in key factors affecting valuation.

Repurchase agreements
Assets sold under repurchase agreements for the account of the fund shall continue to be taken into account in the valuation. In addition, the amounts received for the account of the fund under repurchase agreements shall be reported as bank balances. Assets purchased under repurchase agreements for the account of the fund shall not be taken into account in the valuation. Because of the payments made by the fund, a claim against the transferor in the amount of the discounted repayment claims must be taken into account in the valuation.

Assets denominated in foreign currency
Assets denominated in foreign currency shall be converted on the same day into the currency of the fund using the exchange rate quoted for the respective currency pair on the Thomson Reuters trading platform.

Units
The rights of the investors are represented exclusively by global certificates. These global certificates are kept at a central depository for securities. Investors are not entitled to receive physical delivery of individual share certificates. Units may only be acquired for holding in custody accounts. Share certificates are made out to bearer.

Bearer units in the form of definitive securities were issued for the fund in the past. According to the German Investment Code, these definitive securities may no longer remain in the possession of investors and must, along with the coupons not yet due, instead be held in collective custody by a central depository for securities, an authorized or recognized domestic or foreign central depository or another suitable foreign depository. Investors cannot demand that these definitive securities be re-issued to them. The Company may replace the deposited definitive securities with securitization of the corresponding units in a global certificate.

Bearer share certificates that are still not held in collective custody at one of the aforementioned institutions by December 31, 2016, will become null and void after this date. This also applies to the coupons that are not yet due. As of January 1, 2017, the rights of the investors in question
will instead be represented in a global certificate. The investors then become co-owners, in proportion to their share of the fund’s assets, of this global certificate and of the collective holdings to which the certificate pertains. They can subsequently submit their void bearer share certificates to the Depositary of the fund and demand that their units in the fund or in the global certificate instead be credited to a custody account.

**Issue and redemption of units**

The Company prohibits all activities connected with market timing and similar practices, and it reserves the right to refuse buy, sell and exchange orders if it suspects that such practices are being applied. In such cases, the Company will take all measures necessary to protect the other investors in the fund.

**Issue of units**

The number of units issued is generally unlimited. Units can be purchased from the Depositary and from the agents designated in the section “Special section – Units – Issue of units.” They are issued by the Depositary at the issue price, which is equal to the net asset value per unit plus an initial sales charge. Acquisition through an intermediary is also possible; additional costs may be incurred when so doing. The Company reserves the right to suspend or definitively discontinue the issue of units. The issue of units may be suspended in whole or in part (through mechanisms such as the introduction of upper limits).

If a minimum investment is required for an investment, this fact is disclosed in the section “Special section – Minimum investment.”

It may be provided that units in some unit classes of the fund may only be acquired and held by investors if these investors meet certain additional requirements. Where applicable, these prerequisites are described in the section “Special section – Units – Issue of units.”

**Redemption of units**

Investors can generally request the redemption of units unless the Company has temporarily suspended the redemption of units (see section “Units – Issue and redemption of units – Suspension of the redemption of units”). Redemp-

tion orders shall be placed with the Depositary or with the Company itself. The Company is obligated to redeem units at the redemption price applicable on the settlement date, which corresponds to the net asset value per unit determined on that date less any applicable redemption fee. Redemption through an intermediary is also possible; additional costs may be incurred when so doing.

**Settlement when issuing and redeeming units**

The Company complies with the principle of equal treatment of investors by ensuring that no investor can gain an advantage by buying or selling units at known net asset values per unit. It therefore imposes a daily order acceptance deadline. The settlement of issue and redemption orders received at the offices of the Depositary or the Company by the order acceptance deadline takes place regularly at the net asset value per unit determined on the date the order is received (= the settlement date). Orders received by the Depositary or the Company after the acceptance deadline are not settled until the next valuation date (= the settlement date) at the net asset value per unit determined on that date. The “Special section” can provide otherwise in particular individual cases. The order acceptance deadline for this fund is published on the Company’s Web site at deutschem.com. It can be changed by the Company at any time.

Third parties like the institution maintaining the custody account for the fund can additionally act as intermediaries in the issue and redemption of units. This can result in longer settlement periods. The Company has no influence on the different settlement arrangements of institutions maintaining custody accounts.

Unless otherwise specified in the “Fund-specific regulations” section, the posting of the respective units or the transfer of the amount to be received takes place two business days after the settlement date. This period refers to the processing activity between the institution maintaining the custody account and the Depositary. Posting or transfer from the institution maintaining the custody account to the desired recipient account must follow afterward, and may lead to additional delays. Investors should therefore allow sufficient time when planning for specific payment dates.

**Suspension of the redemption of units**

The Company may suspend the redemption of units under exceptional circumstances that make a suspension appear necessary when taking into consideration the interests of investors. Such exceptional circumstances include, for example, the unscheduled closing of an exchange on which a significant portion of the securities of the fund is traded or that the assets of the fund cannot be valued. A temporary suspension of redemption is admissible particularly if the payment obligations resulting from the redemption cannot be met out of the liquid assets of the fund. As long as redemption is suspended, no new units may be issued. The Company shall, without delay, notify BaFin and the competent institutions of those other member states of the EU or those other states that are parties to the Agreement on the EEA in which it sells units of its decision to suspend redemption. In addition, BaFin may order that the Company suspend the redemption of units if that is necessary in the interests of the investors or the public.

The Company reserves the right not to redeem or exchange units until it has disposed of assets of the fund without delay, but serving the interests of all investors, at the redemption price then applicable. A suspension without subsequent resumption of the redemption of units can lead directly to a liquidation of the investment fund (see section “Liquidation and merger of the fund”).

The Company shall notify the investors by means of an announcement in the Bundesanzeiger and additionally in business publications and daily newspapers with sufficient circulation, or on the Internet at deutschem.com, about the suspension of the redemption of units and its resumption. Investors shall additionally be informed on paper or in electronic format via their institutions maintaining custody accounts.

If it is not possible to fulfill all investor claims for redemption of units, the claims shall be fulfilled in the chronological order of their assertion. Claims made on the same day shall be fulfilled pro rata.

**Liquidity management**

The Company has specified written principles and procedures that enable it to monitor the fund’s liquidity risks and to ensure that the liquidity profile of the investments of the fund matches the underlying liabilities of the fund. The liquidity profile of the fund, which takes into account the investment strategy discussed in the section “Special section – Investment objectives and strategy – Investment strategy,” is disclosed in the section “Special section – Liquidity profile.”

The principles and procedures include:

- The Company monitors the liquidity risks that may arise at the level of the fund or of the assets. It makes an assessment of the liquidity of the assets held in the fund in relation to the fund’s assets and stipulates a liquidity ratio. The evaluation of liquidity includes, for example, an analysis of the trading volume, the complexity of the asset and the number of trading days that are required to dispose of the respective asset without influencing the market price. The Company also monitors the investments in target funds and their redemption policies, and any resulting impact on the liquidity of the fund.

- The Company monitors the liquidity risks that can result from elevated demand by investors for the redemption of units. Here it forms expectations about net changes in capital, taking into account available information on the investor structure and experience from historical net changes in capital. It takes into account the effects of large-scale call risks and other risks (such as reputational risks).

- The Company has established adequate liquidity risk limits for the fund. It monitors compliance with these limits and has specified procedures to follow if the limits are or might be exceeded.

- The procedures instituted by the Company ensure consistency between liquidity ratio, the liquidity risk limits and the net changes in capital to be expected.
The Company reviews these principles regularly and updates them accordingly.

The Company conducts stress tests on a regular basis, at least once each year, with which it can evaluate the liquidity risks of the fund. The Company conducts the stress tests on the basis of reliable and current quantitative or, where that is not appropriate, qualitative information. This information includes investment strategy, redemption periods, payment obligations and periods within which the assets can be sold, as well as information relating to general investor behavior and market developments. The stress tests simulate any potential lack of liquidity of the assets in the fund, as well as requests for redemptions that are unusual in terms of number and scope. They cover market risks and their effects, including margin calls, collateral requirements or lines of credit. They take into account valuation sensitivities under stress conditions.

They are performed at frequencies appropriate for the type of fund, taking into account the investment strategy, the liquidity profile, the type of investor and the redemption principles of the fund.

The redemption rights under normal and exceptional circumstances, as well as the suspension of the redemption of units, are presented in the sections “Units – Issue and redemption of units – Issue of units,” “Units – Issue and redemption of units – Redeption of units” and “Units – Issue and redemption of units – Suspension of the redemption of units”). The associated risks are explained under “Risk warnings – Risks of investing in the fund – Suspension of the redemption of units” and “Risks of restricted or elevated liquidity of the fund (liquidity risk).”

Fair treatment of investors and unit classes

Unless the “Special section” provides otherwise, all units issued have the same configuration characteristics and no unit classes shall be formed. If the “Special section” does provide for the formation of unit classes, all issued units of a specific unit class shall have the same configuration characteristics. Additional unit classes may be formed. The unit classes may especially differ with respect to the distribution policy, the initial sales charge, the redemption fee, the currency of the net asset value per unit, the management fee/all-in fee, the minimum investment or a combination of these features.

It may be provided that units in some unit classes of the fund may only be acquired and held by investors if these investors meet certain additional requirements. Where applicable, these prerequisites are described in the section “Special section – Units – Issue of units.”

The Company shall treat the fund’s investors fairly. When managing liquidity risk and redeeming units, it may not place the interests of one investor or group of investors ahead of the interests of another investor or group of investors.

Regarding the procedures used by the Company to ensure the fair treatment of investors, see the sections “Units – Issue and redemption of units – Settlement when issuing and redeeming units,” “Units – Liquidity management” and “Fair treatment of investors – Handling of conflicts of interest.”

Issue and redemption prices

In calculating the issue price and the redemption price for the units, the Company determines on each valuation date, with the participation of the Depositary, the value of the assets owned by the fund less any liabilities of the fund (the “net asset value”).

The result of dividing the net asset value thus determined by the number of units issued is the value of each unit (the “net asset value per unit”).

The value for the fund’s units is determined on all exchange trading days. On public holidays within the jurisdiction of the KAGB that are exchange trading days, as well as on December 24 and December 31 of each year, the Company and the Depositary may refrain from calculating these prices. No calculation of the net asset value per unit currently takes place on New Year’s Day, Good Friday, Easter Monday, May Day, Ascension Day, Whit Monday, Corpus Christi, the Day of German Unity, Christmas Eve, Christmas Day, St. Stephen’s Day and New Year’s Eve. There are some additional days such as foreign holidays that can also be excluded as valuation days in the “Special section.”

Suspension of the calculation of the issue and redemption prices

The Company will not publish issue or redemption prices during any suspension of the redemption of units (which is explained in more detail in the section “Units – Suspension of the redemption of units”).

Initial sales charge and redemption fee

Precise details on the initial sales charge and on the redemption fee are presented in the sections “Special section – Initial sales charge” and “Special section – Redemption fee.”

Publication of the issue and redemption prices

For each issue and redemption of units the issue and redemption prices and, where applicable, the net net asset value per unit, shall be published in a business publication and a daily newspaper with sufficient circulation and/or on the Internet at deutcham.com.

If units are redeemed through third parties, costs could be incurred for the redemption of the units. Costs higher than the issue price may be charged if the units are sold through third parties.

Costs

Costs related to the issue and redemption of units

No additional costs are charged by the Company or by the Depositary and the agents designated in the section “Special section – Units – Issue of units” for the issue and redemption of units at the respective issue price (net asset value per unit plus initial sales charge) or redemption price (net asset value per unit).

If the investor acquires units through third parties, these third parties can assess costs that are higher than the initial sales charge. If the investor redeems units through third parties, these third parties can assess their own costs when redeeming the units.

Administrative and other costs

Details on administrative and other costs are presented in the section “Special section – Administrative and other costs.”

Circumstances particular to the acquisition of investment fund units

If the fund invests in other investment undertakings, a management fee may be incurred for them. A performance-based fee, where applicable, may additionally be charged. Such a performance-based fee can consume a significant portion of the positive performance of a target fund. Such a performance-based fee may apply in individual cases even if the absolute performance of the fund is negative. In addition, the target fund may be charged with costs, commissions and other expenses that reduce the value of the target fund’s assets. The costs incurred for the target fund may in individual cases be higher than costs customary in the market. They reduce the net asset value of the fund and are incurred even if the performance of the target fund is negative.

These ongoing charges for the target fund units held in the fund are taken into consideration when calculating the total expense ratio (see section “Costs – Statement of total expense ratio”). In connection with the acquisition of target funds, the following types of fees, costs, taxes, commissions and other expenses are borne directly or indirectly by the investors of the fund:

- the management fee/all-in fee of the target fund;
- the performance-based fee of the target fund;
- the initial sales charges and redemption fees of the target fund;
- reimbursements of expenses by the target fund; and
- other costs.
Regulations governing the handling of any management fee or all-in fee of the target fund charged on the acquisition of units of target funds that are directly or indirectly managed by the Company itself or by another company with which the Company is affiliated by virtue of joint management or control, or through a material direct or indirect equity interest amounting to more than 10% of the capital or voting rights, (hereinafter "affiliated target funds") can be found in the “Special section.”

The annual and semiannual reports will contain a disclosure of the initial sales charges and redemption fees that have been charged to the fund during the reporting period for the acquisition and redemption of units of target funds. The Company or the other company may not charge initial sales charges or redemption fees when purchasing affiliated target funds. Also disclosed in the annual and semiannual reports will be the fee that was charged to the fund as a management fee for the target fund units held in the fund by a domestic or foreign company, or by a company with which the Company is affiliated through a material direct or indirect equity interest. The same shall apply with respect to the all-in fee, if an all-in fee is charged to the fund and/or the affiliated target fund.

Buy and sell orders for securities and financial instruments

The Company submits buy and sell orders for securities and financial instruments directly to brokers and traders for the account of the fund. It concludes agreements with these brokers and traders under customary market conditions that comply with first-rate execution standards. When selecting the broker or trader, the Company takes into account all relevant factors, such as the credit rating of the broker or trader and the execution capacities provided. The prerequisite is that the Company shall always ensure that the transactions are executed while taking into account the appropriate market at the appropriate time for transactions of the appropriate type and size at the best possible conditions.

The Company may enter into agreements with selected brokers, traders and other analysis providers in the context of which market information and analysis services (research) are acquired from the respective provider for a fee, whereby the costs and fees incurred in this connection are not charged to the fund. The Company can use these services for the purpose of managing the fund.

When availing of these services, the Company shall comply with all applicable regulatory provisions and industry standards.

Statement of total expense ratio

In the annual report, the management costs accrued and charged to the fund during the fiscal year are disclosed and reported as a ratio of the fund’s average net assets (“total expense ratio”). Management costs consist of fees for the management of the fund, including any applicable performance-based fee, the remuneration of the Depositary and the additional expenses that can be charged to the fund (see sections “Special section – Administrative and other costs” and “Costs – Circumstances particular to the acquisition of investment fund units”). If the fund invests a substantial portion of its assets in other open-ended investment undertakings, the total expense ratio of these target funds is additionally taken into account. The total expense ratio includes neither incidental costs nor costs incurred in the purchase and sale of assets (transaction costs). The total expense ratio is published in the key investor information document as so-called “ongoing charges.”

If the investor is advised on the acquisition of shares by third parties (particularly investment services companies) or if they act as intermediaries for the purchase, they may charge the investor expenses or shares of expenses which are not identical to the expense information in this sales prospectus or the key investor information and which may exceed the total expense ratio described here.

This may be due in particular to regulatory requirements for the determination, calculation and disclosure of costs by investment services companies that result from the national transposition of the MiFID 2 Directive. Deviations from the expense statement may arise on the one hand from the fact that the third party additionally takes into account the costs of its own services (for example, a premium or also ongoing commissions for the brokerage or consulting activities, fees for custody account management, etc.). In addition, investment services companies are subject to sometimes differing requirements for the calculation of costs incurred at fund level, so that, for example, the transaction costs of the fund are included in the third party’s expense statement, although they are not part of the above-mentioned total expense ratio in accordance with the provisions currently applicable to the asset management company.

Deviations in the expense statement may arise not only with regard to the cost information prior to the conclusion of the contract, but also in the event of any regular cost information from third parties regarding existing fund investments as part of a permanent business relationship with its clients.

Compensation policy

The Company is included in the compensation strategy of the DWS Group. All matters related to compensation, as well as compliance with regulatory requirements, are monitored by the relevant governing bodies of the DWS Group. The DWS Group pursues a total compensation approach that comprises fixed and variable compensation components and contains portions of deferred compensation, which are linked both to individual future performance and the sustainable development of the DWS Group. Under the compensation strategy, particularly employees of the first and second management level receive a portion of the variable compensation in the form of deferred compensation elements, which are largely linked to the long-term performance of the DWS share price or of the investment products.

Furthermore, the compensation policy takes the following guidelines into consideration:

a) The compensation policy is consistent with and conducive to sound and effective risk management and does not encourage the assumption of excessive risk.

b) The compensation policy is consistent with the business strategy, objectives, values and interests of DWS Group (including the Company, the investment funds it manages and the investors in these investment funds) and includes measures to avoid conflicts of interest.

c) Performance is generally evaluated on a multi-year basis.

d) The fixed and variable components of the total compensation are proportionate to each other, with the share of the fixed component in the total compensation being high enough to provide complete flexibility with regard to the variable compensation components, including the possibility of waiving payment of a variable component.

Further details on the current compensation policy of the Company are published on the Internet at https://www.dws.com/footer/Legal-Resources/dws-remuneration-policy/. This includes a description of the calculation methods for compensation and bonuses to specific employee groups, as well as the specification of the persons responsible for the allocation, including members of the Compensation Committee. The Company shall provide this information free of charge in paper form upon request. Moreover, the Company discloses further information on employee compensation in the annual report.

Determination of income

Determination of income, income adjustment procedure

The fund generates income in the form of the interest, dividends and income from investment fund units that have accrued during the fiscal year and have not been applied to cover costs. The fund additionally receives considerations from lending transactions and repurchase agreements. Further income can result from the disposal of assets held for the account of the fund.

The Company uses a so-called “income adjustment procedure” for the fund. This prevents the share of distributable income in the unit price from fluctuating as a result of capital inflows and outflows. Otherwise, any inflows of capital into the fund during the fiscal year would lead to less income being available for distribution per unit at the distribution dates than would be the case with a constant number of units in circulation. In
contrast, any outflows of capital would lead to more income being available for distribution than would be the case with a constant number of units in circulation. In order to prevent this, the distributable income over the fiscal year that the purchaser of units must pay as part of the issue price, and that the seller of units receives as part of the redemption price, are continually calculated and entered as a distributable item in the income statement.

In doing so, it is accepted that investors acquiring units shortly before a distribution date, for instance, will receive back the portion of the issue price attributable to income in the form of a dividend, even though their paid-in capital did not contribute to the generation of that income.

Liquidation, transfer and merger of the fund

Conditions for the liquidation of the fund
The investors are not entitled to demand the liquidation of the fund. The Company may, however, terminate its right to manage the fund by giving a minimum of six months’ notice by way of an announcement in the Bundesanzeiger and additionally in the annual report or semiannual report. Investors shall additionally be informed about the termination on paper or in electronic format via their institutions maintaining custody accounts. Upon the effective termination of its management, the Company’s right to manage the fund shall cease.

The Company’s right to manage shall also cease upon the institution of bankruptcy proceedings concerning its assets or when a judicial order by which the application for the institution of such proceedings is rejected for lack of assets becomes final and binding. When the Company’s right to manage expires, the right to dispose of the fund passes to the Depositary, which shall wind up the fund and distribute the proceeds to the investors or, with the approval of BaFin, transfer management to another asset management company.

Procedure for the liquidation of the fund
Once the right to dispose of the fund passes to the Depositary, the issue and redemption of units ceases and the fund is wound up.

The proceeds from the sale of the fund’s assets, less any remaining costs still payable by the fund and the costs associated with the liquidation, are distributed to the investors. The investors shall be entitled to a share of the liquidation proceeds that is proportional to the number of units they hold in the fund.

The Company will prepare a liquidation report, dated to the day on which its right to manage expires, that meets the requirements of an annual report. No later than three months after the date of liquidation of the fund, the liquidation report is published in the Bundesanzeiger. While the Depositary liquidates the fund, it prepares liquidation reports that meet the requirements of an annual report annually and on the date that the liquidation is completed. These reports must also be published in the Bundesanzeiger no later than three months after the date of liquidation.

Transfer of the fund
The Company may transfer the right to manage and dispose of the investment fund to another asset management company. The transfer requires the prior written approval of BaFin. The approved transfer shall be announced in the Bundesanzeiger (Federal Gazette) and, in addition, in the annual report or semiannual report for the fund. The institutions maintaining the custody accounts shall also inform investors about the planned transfer by means of a durable medium, such as on paper or in electronic format. The time at which the transfer becomes effective is determined by the contractual arrangements between the Company and the receiving asset management company. However, the transfer shall take place no sooner than three months after its announcement in the Bundesanzeiger. All rights and obligations of the Company in relation to the fund are then transferred to the receiving asset management company.

Settlement of the distribution of the liquidation proceeds
Settlement takes place three bank business days after the liquidation date. This period refers to the processing activity between the institution maintaining the custody account and the Depositary. Posting or transfer from the institution maintaining the custody account to the desired recipient account must follow afterward, and may lead to additional delays. Investors should therefore allow sufficient time when planning for specific payment dates.

Conditions for the merger of the fund
All the assets of this fund may, with the approval of BaFin, be transferred to another currently existing investment undertaking or to a new investment undertaking established by the merger. If that other investment undertaking is a UCITS, it must still fulfill the requirements of a UCITS that was launched in Germany or in another EU or EEA state even after the transfer of assets. The transfer may also be effected by transferring all assets to a currently existing domestic investment stock corporation with variable capital or to a new one established by the merger.

The transfer takes effect at the end of the transferring fund’s fiscal year (the “key date of transfer”), unless another key date of transfer is specified.

Rights of investors in the merger of the fund
The institutions maintaining the custody accounts of the fund’s investors will, no later than 37 days before the proposed key date of transfer, inform investors on paper or in electronic format about the reasons for the merger, the potential effects for investors and the rights of investors in connection with the merger, as well as on material procedural aspects. Investors will further receive the key investor information document for the investment undertaking to which the assets of the fund are to be transferred.

Investors have five working days before the proposed key date of transfer to either return their units at no additional cost other than the costs incurred for the liquidation of the fund or to exchange their units for units of another open-ended investment undertaking that is also managed by the Company or another entity belonging to the same group of companies and whose investment principles are comparable to those of the fund.

On the key date of transfer, the net asset values of the fund and of the receiving investment undertaking are calculated, the conversion ratio is determined, and the entire exchange procedure is examined by the auditor. The conversion ratio is calculated on the basis of the ratio of the net asset values per unit of the fund and of the receiving investment undertaking at the time of the transfer. The investor receives the number of units of the fund that corresponds to the value of the units held in the transferring investment fund.

If investors do not avail of their redemption or exchange right, they become investors in the receiving investment undertaking on the key date of transfer. The Company also has the option to arrange with the management company of the receiving investment undertaking that investors in the fund shall receive a disbursement in cash of up to 10% of the value of their units. Once all the assets of the fund are transferred, the fund ceases to exist. If the transfer takes place during the current fiscal year of the fund, the Company must prepare a report, dated to the key date of transfer, that meets the requirements of an annual report.

The Company will announce in the Bundesanzeiger, and additionally in a business publication and a daily newspaper with sufficient circulation, on the Internet at deutscheam.com, when the fund was merged into another investment undertaking managed by the Company and when the merger took effect. If the fund is merged into another investment undertaking that is not managed by the Company, the management company that administers the receiving or newly established investment undertaking makes the announcement of the merger taking effect.
## Outsourcing

DWS Investment GmbH has outsourced the following material activities. Some of the activities were in turn delegated to other outsourcing companies:

* Conflicts of interest in relation to outsourcing:
  - Variant 1: No conflicts of interest are identified. Potential conflicts of interest would be mitigated by the configuration of the outsourcing contract.
  - Variant 2: The outsourcing company is a company affiliated with the Management Company. It cannot be ruled out that the contract might have been concluded in another form if a management company were involved that is not linked under corporate law or personally.
**Fair treatment of investors / Handling of conflicts of interest**

**Guiding principle**

The Company conducts its operations in such a way that conflicts of interest are handled in a fair manner, both between the Company, its employees and its investors and between one investor and another. In conflicts of interest between the Company or its employees on the one hand and the investors on the other hand, investor interests shall always take priority.

**Introduction**

As a globally active financial services provider, the Company and its affiliated companies within the Deutsche Bank Group (including Deutsche Bank AG) are constantly confronted with actual or potential conflicts of interest. It is a principle of the Company to take all reasonable steps to establish organizational structures and to apply effective administrative measures to enable the identification, handling and monitoring of the conflicts in question.

The Company’s management is responsible for ensuring that the systems, controls and procedures of the Company for the identification, monitoring and resolution of conflicts of interest are appropriate. The Compliance and Legal departments of the Company provide support in the identification and monitoring of actual and potential conflicts of interest.

The Company has appropriate procedures in place to identify, handle and monitor actual or potential conflicts of interest on a division-specific basis. The Company has established principles for handling conflicts of interest; they are available on the DeAM Web site – https://www.db.com/company/en/conflicts-of-interest-policy.htm – in their respective current version.

**Objective**

The Company will take reasonable steps to identify and appropriately handle conflicts of interest that have a material adverse effect on client interests. Corresponding guidelines specify the requirements for appropriate procedures and measures at Group and divisional level to identify, prevent and, where prevention is not possible, handle all such material conflicts of interest in the best interests of the affected clients.

**Fair treatment of investors**

The Company is obligated to treat the fund’s investors fairly. It manages the fund according to the principle of the fair treatment of investors by not giving preferential treatment to some investment undertakings, and investors of the investment undertakings, at the expense of others. The decision-making processes and organizational structures of the Company are aligned accordingly.

The Company is aware that conflicts of interest may arise based on the functions that employees of the Company and of associated companies perform as members of the Deutsche Bank Group. In respect of such persons, each Deutsche Bank Group member has undertaken to endeavor, to a reasonable extent, to resolve such conflicts of interest equitably (with regard to the members’ respective duties and responsibilities), and to ensure that the interests of the investors are not adversely affected. The Company is of the view that Deutsche Bank Group members possess the required aptitude and competence to perform such duties.

(Potential) Material conflicts of interest

The following material conflicts of interest can have a negative impact on the economic result achievable by the investor and in particular lead to lower payouts to investors (see also the risk warnings). In addition, other conflicts of interest can exist or occur in the future that might also have a negative impact particularly on the economic result achievable by the investor, and lead to lower payouts to investors.

a) Conflicts of interest at the level of the Company

Deutsche Bank AG and the Company, as well as the persons taking actions at these companies, are all members of the Deutsche Bank Group (collectively “Affiliated Entities”). Some of them are also involved or active in the same or similar functions at other funds as at this fund, or will be in the future. This can give rise to conflicts of interest.

The Affiliated Entities are directly or indirectly connected to each other under corporate law or personally. The partial identities of the companies involved, and the corporate or personal links between them, can lead to conflicts of interest. It cannot be ruled out that contracts material for the fund might have been concluded in another form if only such companies were involved that do not perform multiple functions and are not linked under corporate law or personally.

The interests of the companies and related parties can conflict with each other. In the event of conflicts of interest affecting the Company, the Company will endeavor to resolve such conflicts in favor of the fund’s investors. Insofar as the interests of the investors are also affected, the Company will endeavor to avoid any conflicts of interest and, if it is impossible to avoid such conflicts, to ensure that inevitable conflicts of interests are resolved while suitably protecting the interests of the investors.

The fund can invest in financial instruments (e.g., money market funds) whose underlyings are the conduits of the Deutsche Bank Group and their subsidiaries, or Affiliated Entities. In some cases, such transactions, derivatives transactions, derivatives contracts or similar items may have to be evaluated on the basis of information provided by the counterparties. Such information may constitute in these cases the basis for calculation of the value of particular assets of the respective fund by the Depositary. This can give rise to conflicts of interest.

Assets of the fund in the form of bank balances, units of investment undertakings or securities (to the extent permissible according to the terms and conditions of investment of the respective fund) may be deposited with Affiliated Entities in accordance with the legal provisions at the Depositary. Bank balances of the fund may be invested in securities or certificates of deposit issued by Affiliated Entities or in bank deposits offered by Affiliated Entities. This can have the consequence that, in addition to the interest rate (e.g., for bank balances), other factors concerning the investment become relevant as well (e.g., flow of information, but also and especially the interest of the Affiliated Entities in investments in their own products or those of Affiliated Entities). Banking or comparable transactions can also be conducted with or through the Affiliated Entities. Affiliated Entities can further be counterparties in derivatives transactions or derivatives contracts. This can give rise to conflicts of interest in the valuation of such derivatives transactions or derivatives contracts.

Notwithstanding provisions to the contrary in this document, the Company may actively conduct transactions for the account of other funds that involve the same units, real estate, securities, assets and instruments in which the Company will invest. The Company may provide for other funds and accounts investment management and advisory services and administrative services that have similar or different investment objectives to those of the fund and/or which can execute investment programs similar to those of the fund and in which they have no involvement. The portfolio strategies that are used for these or other investment funds could conflict with the transactions and
strategies that are recommended by the Affiliated Entities in the management of the fund, and adversely affect the prices and availability of the units, securities and instruments in which the fund invests.

The Company devotes to the activities of the fund as much time as it deems necessary and appropriate. There are no restrictions on the Company when it comes to launching additional investment funds, especially with regard to entering into further investment advisory relationships or pursuing additional business activities, even if those activities are in competition with the activities of the fund.

Non-exercise of voting rights
In order to avoid any potential conflicts of interest, the Company will not exercise voting rights arising from shares of Deutsche Bank AG.

b) Conflicts of interest at the level of the sales partners
Because potential distributors receive a share of fee components or other payments from the Company, there is an added incentive for the distributor to generate sales.

c) Repayment and forwarding of management fees collected
The Company does not receive any reimbursement of the fees and expense reimbursements paid out of the fund to the Depositary and third parties.

With the exception of TF-Unit classes The Company grants brokerage fees, so-called “trail commissions,” to intermediaries such as credit institutions on a recurring basis, usually annually. These may be significant portions of the management fee of the Company. This is remuneration for sales services. At the request of an investor in the fund, the Company shall disclose further details to the investor.

The Company shall not pay remuneration to distributors for TFUnit classes, with the result that the investor’s costs associated with investing in the TFUnit class may be lower than those associated with an investment in other unit classes of the same investment fund.

The Company may, at its discretion, agree with individual investors the partial repayment to them of the management fees collected. This can be a consideration especially in the case of institutional investors who directly invest large amounts for the long term.

Auditor
The audit firm KPMG AG, THE SQUAIRE, Am Flughafen, 60549 Frankfurt/Main, Germany, has been appointed auditor of the fund and of the annual report. The auditor audits the annual report of the fund. When performing the audit, the auditor shall also determine whether the fund has been managed in compliance with the provisions of the KAGB and those of the Terms and Conditions of Investment. The auditor shall summarize the findings of the audit in a special report; the auditor’s report shall be reproduced in full in the annual report. The auditor shall submit the auditor’s report for the fund to BaFin on request.

Payments to investors / Distribution of reports and other information
The appointment of the Depositary ensures that investors will receive dividend distributions and that units will be redeemed. The investor information mentioned in this sales prospectus can be obtained in the manner indicated in the section “General principles – Sales documentation and disclosure of information.” The documentation can also be obtained at the Depositary.

The Company discloses the following information:

- Information on any changes with respect to the liability of the Depositary, without delay, in a business publication and a daily newspaper with sufficient circulation, or on the Internet at www.deutscheam.com.
- The percentage of the AIF’s assets that are difficult to liquidate and are therefore subject to special arrangements, in the annual report.
- Any new rules for the AIF’s liquidity management, in the annual report.
- The current risk profile of the AIF and the risk management systems employed to manage those risks, in the annual report.
- All changes to the maximum permitted level of leverage, in the annual report.
- Rights of reuse of collateral and guarantees provided to the AIF as part of leverage transactions, and changes to these rights, in the annual report.
- The total amount of leverage of the AIF in question, in the annual report.

Service providers
Companies that are assuming functions outsourced by the Company are presented under “Outsourcing.” The Company has additionally appointed the following service providers:

- KPMG AG Wirtschaftsprüfungsgesellschaft, THE SQUAIRE, Am Flughafen, 60549 Frankfurt/Main, Germany, as the auditor of the fund and of the annual report.
- State Street Bank, Brienner Straße 59, 80333 Munich, Germany, for the administration of collateral in connection with securities lending and derivatives transactions.
- Institutional Shareholder Services, Ten Bishops Square, London E16EG, United Kingdom, for the preparation of proposals on exercising voting rights.
- WM Datenservice, Düsseldorfer Straße 16, 60329 Frankfurt/Main, Germany, as service provider for publications.
- Bloomberg, Neue Mainzer Straße 75, 60311 Frankfurt/Main, Germany, as service provider for publications.
- Smarthouse Media GmbH, Hirschstraße 2, 76133 Karlsruhe, Germany, for hosting and operating the Web site. The appointment of the service providers does not give rise to conflicts of interest.

If an investment advisor is being used, this fact is disclosed in the “Special section.” DWS Investment GmbH will gladly provide the names of further service providers (e.g., the law firms and tax firms engaged) on request.
Sales Prospectus – Special Section
PWM US Dynamic Growth (USD)

Fund, sub-funds and unit classes

The fund PWM US Dynamic Growth (USD) was launched on September 8, 2008, for an indefinite period. By purchasing units, the investor becomes a joint owner, on a fractional basis, of the assets held by this fund. The investor has no control over the assets. Share certificates are made out to bearer, are issued for one unit or multiples thereof and embody the bearer’s claims against the Company. All units issued have the same configuration characteristics. No unit classes shall be formed. The fund is not a sub-fund of an umbrella structure.

Investment objective and strategy

Investment objective

The objective of the fund is to generate the highest possible appreciation of capital. Income is reinvested in the fund.

The fund is not benchmarked against an index.

As part of its discretionary management policy for the fund, the Company engages in active selection of the assets permitted under the KAGB and the Terms and Conditions of Investment. Decisions on asset selection are based on well-founded evaluations by the globally networked investment specialists of the fund management.

The fund management does not use a benchmark to manage the fund because it believes that focusing on a variable portfolio composition is the best way to realize the investment strategy.

Investment strategy

The Company acquires and sells the assets permitted under the KAGB and the Terms and Conditions of Investment in accordance with its assessments of economic and capital-market conditions. In the selection of units of investment undertakings, the Company focuses on the sales documentation made available, as well as on the past price performance of these investment funds.

1. At least 51% of the fund’s assets are invested in equities of U.S. issuers or in companies having their principal business activity in the United States, in investment funds that in turn invest at least 51% of their assets in equities as defined above, or in certificates whose underlyings are equities as defined above or U.S. equity indices or equity baskets of issuers as defined above.

2. Up to 100% of the fund’s assets may be invested in securities as defined in article 26, no. 1, of the Special Terms and Conditions of Investment.

Of this amount,
- up to 20% may be invested in fixed rate and floating rate securities, convertible bonds, warrant-linked bonds and dividend-right certificates, certificates on investments whose underlying instruments are bonds, such as bond indices and bond baskets, as well as asset-backed securities, including mortgage-backed securities;  
- up to 15% may be invested in certificates on commodities and commodity indices.

3. Up to 20% of the fund’s assets may be invested in money market instruments according to article 26, no. 2, of the Special Terms and Conditions of Investment.

4. Up to 20% of the fund’s assets may be held in bank balances according to article 26, no. 3, of the Special Terms and Conditions of Investment.

5. Up to 100% of the fund’s assets may be invested in investment fund units and in shares of investment stock corporations whose terms and conditions of investment or articles of incorporation and by-laws correspond to articles 192 to 213 KAGB, in investment units and units in EU UCITS, and in the corresponding foreign open-ended investment fund units and shares according to article 26, no. 4, of the Special Terms and Conditions of Investment in conjunction with article 196 KAGB.

6. Up to 100% of the fund’s assets may be invested in units of ‘Mixed’ investment funds and in shares of investment stock corporations whose terms and conditions of investment or articles of incorporation and by-laws correspond to articles 218 and 219 KAGB, as well as in the corresponding foreign open-ended investment fund units and shares according to article 26, no. 4, of the Special Terms and Conditions of Investment.

7. A total of up to 30% of the fund’s assets may be invested in any and all types of swaps, credit default swaps, forwards, futures, options and swaptions according to article 26, no. 5, of the Special Terms and Conditions of Investment, in the precious metals copper, silver, gold, ruthenium, rhodium, palladium, osmium, iridium, platinum and mercury according to article 26, no. 7, of the Special Terms and Conditions of Investment, as well as in non-securedized loans according to article 26, no. 7, of the Special Terms and Conditions of Investment.

8. A total of up to 20% of the fund’s assets may be invested in other investment instruments according to article 26, no. 6, of the Special Terms and Conditions of Investment, as well as in shares of businesses according to article 27, no. 10, of the Special Terms and Conditions of Investment that are not admitted for trading on an exchange or included in an organized market and were acquired before July 22, 2013.

9. Up to 30% of the fund’s assets may be invested in units of ‘Other’ investment funds.

Also included in this investment limit are investment funds with additional risks (hedge funds), as well as the corresponding investment stock corporations, EU investment undertakings and foreign AIFs that were acquired before July 22, 2013.

As regards the persons in charge of investment decisions at the target funds, the Company determines whether the managing directors and/or fund managers concerned have a general professional ability to conduct transactions with ‘Other’ investment funds, and whether they have empirical knowledge corresponding to the respective fund profile, as well as practical expertise. This approach was also applied in the selection of the hedge funds already acquired.

a) ‘Other’ investment funds

‘Other’ investment funds in this respect are:
- ‘Other’ investment funds and/or investment stock corporations whose terms and conditions of investment or articles of incorporation and by-laws correspond to articles 220 to 224 KAGB.
- EU investment undertakings whose investment policies make them subject to requirements comparable to those of German ‘Other’ investment funds.
- ‘Other’ investment policies make them subject to requirements comparable to those of German ‘Other’ investment funds.

‘Other’ investment funds must
- have their assets held in custody by a depositary or have the function of the depositary discharged by another comparable institution;
- have regulations governing borrowing.

‘Other’ investment funds may borrow up to 20% of the value of the investment fund’s assets as part of their investment strategy to increase leverage, and may make unrestricted use of derivatives.

Acquirable ‘Other’ investment funds may pursue all of the investment strategies permissible under article 221 KAGB. There are no restrictions.
b) Investment funds with additional risks (hedge funds):

Notwithstanding article 221 KAGB, and in accordance with article 349, nos. 2 to 4, KAGB and article 8 (5) (b) of the General Terms and Conditions of Investment, the fund may continue to hold units of investment funds with additional risks that were launched pursuant to article 112 of the German Investment Act ("InvG") and shares of investment stock corporations whose articles of incorporation and by-laws provide for an investment form comparable to that of article 112 InvG and were launched accordingly, as well as units or shares of EU investment undertakings or foreign AIFs comparable to article 349, no. 2 or no. 3, KAGB, provided that these units or shares were acquired before July 22, 2013.

Hedge funds in this respect were:

- Investment funds with additional risks and/or investment stock corporations whose articles of incorporation and by-laws provide for an investment form comparable to that of German single hedge funds.
- EU investment undertakings whose investment policies made them subject to requirements that were comparable to those of German single hedge funds.
- Foreign AIFs whose investment policies made them subject to requirements that were comparable to those of German single hedge funds.

Hedge funds (target funds) had to

- have their assets held in custody by a depositary or have the function of the depositary discharged by another comparable institution.
- have regulations governing separate custody of their assets, borrowing, granting of loans and short sales of securities and money market instruments.

Target funds could take out unlimited loans or make unlimited use of derivatives as part of their investment strategy to increase leverage. There was no limit in principle on the sale for the collective account of assets that do not belong to the investment fund at the time of concluding the transaction (short sale).

Target funds that, as hedge funds, pursued so-called alternative investment strategies employed one or more of the strategies described below. The description of the alternative investment strategies presented here could differ from that in other publications or documents; it was the subject matter of the strategies described here that was of significance:

**Equity long/short strategy**

Through the long/short strategy, long positions in equities, equity index derivatives or other derivatives may be combined with short sales of equities, equity index derivatives or other derivatives. The success of the strategy depends primarily on the selection of stocks and on the degree to which the target fund manager is successful in accurately predicting the future development of the equity markets. When equity markets rise, a target fund that makes use of this strategy participates in the positive developments of the stocks in which the fund holds long positions. Conversely, the portion of the target fund that is sold short, meaning the stocks in which the target fund manager has entered into short-sale transactions, tends to minimize losses when the equity markets are falling, and may in certain circumstances even lead to gains.

**Global macro**

Global macro target fund managers can employ strategies that are oriented toward significant economic or political events that may, for example, influence developments in the interest rate markets or in other financial markets. They analyze the effects of such events with the objective of generating profits from both rising and falling markets. Portfolios are built up of securities considered to be undervalued and short sales of related instruments that the target fund manager considers to be overvalued with the objective of achieving gains. The target fund manager may make use of directional trading or relative-value approaches to achieve this objective. The directional trading approach also focuses on unhedged long or short positions in different markets. In contrast, the relative-value approach seeks to limit market risk to the greatest possible extent through the use of hedging transactions.

**Managed futures / CTAs**

Target fund managers who use Managed futures / CTA (Commodity Trading Advisor) strategies seek to identify and take advantage of developments in the financial and commodities markets – usually with the aid of computers. Their systematic approach focuses on developments in a very large number of markets. Constant research and continuous development of trading systems are particularly important in this strategy.

**Option strategies**

In this strategy, the target fund manager works with options and seeks gains primarily through option premiums. For example, he may buy exchange-traded put options on individual European or U.S. blue-chip stocks and collect an option premium for this. The market volatility to which a stock is subject plays a crucial role in the amount of the option premium. In general, the higher the volatility, the higher the option premium. To hedge the target fund’s portfolio, exchange-traded put options based on an index that reflects the performance of a number of different stocks – including the stocks that underlie the equity put options (index put options) – may be bought. In addition, capital invested may be leveraged through loans or through the use of derivatives.

**Convertible arbitrage**

This strategy seeks to exploit price inefficiencies between convertible securities such as convertible bonds, for example, and the corresponding stocks. The target fund manager acquires the convertible securities and takes a short position in the stocks underlying the convertible bond to reduce the risk associated with the stock. In addition, the target fund manager may make use of this strategy when the market value of the stocks may also enter into the transaction through the accumulation of a short position that is proportionally greater or less than the corresponding conversion ratio. This results in additional opportunities and risks.

**Event-driven arbitrage**

Event-driven arbitrage is a strategy based on events, an example being the life cycle of a company. The target fund manager invests in individual securities in which he expects corporate events to occur that he believes have not been factored into the current price. Such events may especially include various corporate transactions, such as spin-offs, mergers and acquisitions, financial reorganizations due to imminent bankruptcy or stock buybacks. The manager seeks profits in various ways, including the use of long and short positions in equities and interest-bearing securities and options.

**Merger arbitrage**

Merger arbitrage managers seek to take advantage of expected price differences that might arise between the current market price of securities affected by a merger, a takeover, a takeover offer or similar corporate transactions, and the price of the securities after the transaction has been completed. This normally is effected by entering into a long position in the stock of the company being taken over and a short position in the stock of the company carrying out the takeover. The width of the spread normally reflects the evaluation of the market as to the probability of a successful conclusion of the transaction. Transactions considered to be likely to fail offer higher returns than mergers that are held to be certain.

**Fixed-income arbitrage / Credit arbitrage**

Fixed-income arbitrage and credit arbitrage are strategies in which the target fund manager primarily buys fixed-income securities he believes to be undervalued and sells securities he considers overvalued. Most of the time, relative price differences arise temporarily as a consequence of local or global events, due to
transitory supply-demand imbalances or because of varying accounting standards or regulatory provisions in a particular region. Relative price differences may also arise because buyers and sellers of securities seek different investments due to risk preferences, hedging needs or investment views. Managers using these strategies are often highly leveraged in order to be able to participate appropriately in these normally very small differences.

**Other relative-value arbitrage**
An approach that, depending on market assessment, makes flexible use of the aforementioned arbitrage strategies. It allows for temporary concentration on one or more strategies.

10. Notwithstanding article 221 KAGB, and in accordance with article 349, no. 5, KAGB and article 10 (1) of the General Terms and Conditions of Investment, the fund may continue to hold equity interests in businesses whose market value can be determined, provided these ownership interests were acquired before July 22, 2013.

The Company could specifically acquire ownership interests in the following types of businesses:
- domestic and foreign partnerships,
- domestic and foreign corporations,
- trusts.

The investment limit specified in article 27 (8) of the Special Terms and Conditions of Investment continues to apply and relates correspondingly to other investment instruments according to article 26, no. 6, of the Special Terms and Conditions of Investment and to equity interests in businesses acquired before July 22, 2013, whose market value can be determined.

11. Notwithstanding article 221 KAGB, and in accordance with article 349, no. 1 and no. 4, KAGB and article 8 (5) (a) of the General Terms and Conditions of Investment, the fund may continue to hold units of real estate investment funds that were launched according to articles 66 to 82 InvG, as well as units or shares of EU investment undertakings or foreign AIFs comparable to such investment funds, provided that these units or shares were acquired before July 22, 2013.

Up to 15% of the fund’s assets could be invested in such units or shares. The terms and conditions of investment of real estate investment funds and of the corresponding EU investment undertakings and foreign AIFs had to provide for the following real estate investments:
- residential rental properties, commercial properties, mixed-use properties, properties under construction, undeveloped plots, hereditary building rights and interests in real-estate companies, as well as rights in the form of residential property ownership, part-ownership, hereditary building rights for residential properties, partial hereditary building rights and usufruct of properties.

12. In addition, subject to the investment limits defined in the preceding paragraphs 1 through 11, at least 51% of the gross assets (defined as the total value of the assets of the investment fund without deduction of liabilities) must be invested in equities that are admitted for official trading on an exchange or admitted to or included in another organized market and which are not units of investment undertakings.

No assurance can be given that the objectives of the investment strategy will actually be achieved.

In addition, the fund may temporarily concentrate more or less intensively on particular sectors, countries or market segments. This, too, may give rise to opportunities and risks.

**Derivatives**

The Company can detect and measure sufficiently accurately all market risks in the fund arising from the use of derivatives.

**Explanation of the fund’s risk profile**

The performance of the fund is influenced in particular by the following factors, which give rise to both opportunities and risks:

- Risk of price changes in equities
- Currency risk
- Risks associated with derivative transactions
- Risk from investing in assets
- Elevated risks from the acquisition of investment fund units according to articles 192 to 213 KAGB, units of real estate investment funds according to articles 66 to 82 InvG, units of ‘Mixed’ investment funds according to articles 218 and 219 KAGB, units of ‘Other’ investment funds according to articles 220 to 224 KAGB and units of investment funds with additional risks according to article 112 InvG (hedge funds), shares of investment stock corporations according to article 108 KAGB whose articles of incorporation and by-laws / terms and conditions of investment provide for investment forms comparable to articles 192 to 213 KAGB, 218 and 219 KAGB, 220 to 224 KAGB or article 112 (1) InvG, as well as units and shares of the respective comparable EU and foreign investment undertakings. Units of real estate investment funds according to articles 66 through 82 InvG, units or shares of EU or foreign AIFs comparable to this type of investment fund and units of investment funds with additional risks according to article 112 InvG, as well as shares of investment stock corporations whose articles of incorporation and by-laws provide for an investment form comparable article 112 InvG, may no longer be acquired for the fund as of July 22, 2013, but may continue to be held.

In addition, the fund may temporarily concentrate more or less intensively on particular sectors, countries or market segments. This, too, may give rise to opportunities and risks.

**Increased volatility**

Due to its composition and the techniques applied by its fund management, the fund is subject to markedly increased volatility, which means that the price per unit may be subject to substantial downward or upward fluctuation, even within short periods of time.

**Specific risk warnings**

To determine the extent to which the market risk limit has been reached, the Company applies the so-called “qualified approach” as defined by the Derivatives Regulation. To this end, the Company compares the market risk of the fund with the market risk of a virtual reference portfolio containing no derivatives. The reference portfolio with no derivatives is a virtual portfolio that corresponds exactly to the current value of the fund’s assets at all times, but which does not include increases or hedges of market risk using derivatives. The composition of the reference portfolio must correspond in all other respects to the investment objectives and investment policy applicable to the fund. The reference portfolio with no derivatives for the fund PWM US Dynamic Growth (USD) consists of the largest U.S. companies.

The precise composition of the reference portfolio is available from the Management Company on request.

If derivatives are used, the value-at-risk amount for the fund’s market risk exposure may at no time exceed twice the value-at-risk amount for the market risk exposure of the associated reference portfolio with no derivatives.

The market risk of both the fund and the reference portfolio with no derivatives is determined by means of a suitable internal risk model, applying the value-at-risk method. As its modeling method, the Company uses historical simulation with a complete revaluation of the products. The main parameters are: 99% confidence interval, 10-day holding period, 1-year history and no decay factor. Stress tests are additionally performed, and the value-at-risk methodology is confirmed through back-testing. The Company records the market price risks from all transactions. By means of the risk model, it quantifies the change in the value of the assets held in the fund over time. The so-called “value at risk” is thus a limit, expressed as a monetary amount, for potential losses in a portfolio between two given points in time. This change in value is determined by random events, namely, the future development of market prices, and can therefore not be predicted with certainty. The market risk to be determined in each case can be estimated only with sufficiently high probability.

The Company may – provided an appropriate risk management system is in place – invest in any and all types of derivatives. This requires that the derivatives be based on assets that may be acquired for the fund, or on the following underlyings:

- Interest rates
- Exchange rates
- Currencies

- Financial indices that are sufficiently diversified, represent an adequate benchmark for the market to which they refer, and are published in an appropriate manner. In particular, this includes options, financial futures and swaps, as well as combinations thereof.

**Profile of a typical investor**

The fund is intended for the risk-tolerant investor who, in seeking investments with strong returns, can tolerate the substantial fluctuations in the values of investments, and the very high risks this entails. Strong price fluctuations and high credit risks result in temporary or permanent reductions of the net asset value per unit. Expectations of high returns are not consistent with the investor’s risk profile. Financial risks result in temporary or permanent decreases in the value of investments, and the very high risks this entails. Strong price fluctuations and high credit risks result in temporary or permanent reductions of the net asset value per unit. Expectations of high returns are not consistent with the investor’s risk profile. The investor is willing and able to bear such a financial loss and is not concerned with capital protection.

The Company provides additional information to distribution agents and distribution partners concerning the profile of a typical investor or the target client group for this financial product. If the investor is advised on the acquisition of units by distribution agents or distribution partners, or if such agents or partners act as intermediaries for the purchase of units, they may therefore present additional information to the investor that also relates to the profile of a typical investor.

**Units**

**Issue of units**

Units can be purchased from the Depositary, the Company or through an intermediary. All orders are submitted on the basis of an unknown net asset value per unit. Orders received by the Company or the Depositary at or before 1:30 PM CET (the order acceptance deadline) on a valuation date are processed on the basis of the net asset value per unit on that valuation date. Orders received by the Company or the Depositary after 1:30 PM CET are processed on the basis of the net asset value per unit on the next valuation date. Deutsche Bank AG and Deutsche Bank Privat- und Geschäftskunden AG will additionally act as secondary paying agents in Germany; in this capacity, they too will accept buy orders up until the order acceptance deadline.

**Redemption of units**

Units are redeemed by the Company or the Depositary. All orders are submitted on the basis of an unknown net asset value per unit. Orders received by the Company or the Depositary at or before 1:30 PM CET (the order acceptance deadline) on a valuation date are processed on the basis of the net asset value per unit on that valuation date. Orders received by the Company or the Depositary after 1:30 PM CET are pro-
The liquidity profile can change within the investment strategy, the fund invests in assets of which:

- up to 100% of the net asset value can be liquidated daily,
- up to 0% of the net asset value can be liquidated within periods of one (1) to seven (7) days,
- up to 0% of the net asset value can be liquidated within periods of eight (8) to thirty (30) days,
- up to 0% of the net asset value can be liquidated within periods of thirty-one (31) to ninety (90) days,
- up to 0% of the net asset value can be liquidated within periods of ninety-one (91) to one hundred and eighty (180) days,
- up to 0% of the net asset value can be liquidated within periods of one hundred and eighty-one (181) to three hundred and sixty-five (365) days,
- up to 0% of the net asset value can regularly be liquidated only within a period of over one year.

The liquidity profile can change within the confines of the investment strategy.

Issue and redemption prices

The initial sales charge for the fund is currently 5% of the net asset value per unit. This initial sales charge may reduce or completely consume performance, particularly in the case of a short investment period.

The initial sales charge is basically a fee for the distribution of the units of the fund. The Company may pass on the initial sales charge to intermediaries as remuneration for sales services.

Redemption fee

A redemption fee is not charged.

Administrative and other costs

All-in fee

The Company shall receive from the assets of the fund an all-in fee of 1.2% p.a. of the annual average net asset value of the fund, calculated based on the net asset value determined each exchange trading day (see article 18 of the General Terms and Conditions of Investment). The Company has the right to collect monthly prorated advances on this fee. The following fees and expenses are included in the all-in fee, and will not be charged separately to the fund:

- fee for managing the fund (collective asset management, which particularly includes fund management, administration, cost of distribution and a service fee for reporting and analysis);
- Depositary fees;
- cash and custody account fees in line with normal banking practice (including, where applicable, normal costs for holding foreign assets in custody abroad);
- the costs incurred for printing and mailing the sales documentation intended for investors as required by law (annual and semiannual reports, sales prospectuses, key investor information document);
- the cost of announcing the annual and semiannual reports, the issue and redemption prices and (where applicable) distributions or reinvestments and the liquidation report;
- the cost of having the fund audited by the external auditor of the fund;
- the cost of publishing the information required for taxation and the certificate confirming that the tax information was prepared in compliance with German tax law.

The following additional expenses may also be charged to the fund:

- transaction costs incurred in the purchase and sale of assets;
- taxes imposed in connection with the fees payable to the Company, the Depositary and third parties, as well as with the expenses mentioned hereinafter, including taxes arising in connection with administration and custody;
- the costs incurred by the Company for asserting and enforcing legal claims for the account of the fund, and for defending any claims asserted against the Company to the detriment of the fund;
- the cost of informing investors by durable medium, not including the cost of informing investors by durable medium in cases of

The amount of transaction costs borne by the fund depends on the number of transactions actually conducted during the fiscal year. The Company anticipates a maximum of 2% of average assets under management for the period of one fiscal year of the fund. The actual transaction costs can, in fact, be higher or lower during this period. The aforementioned percentage is therefore just an estimate.

Other costs are anticipated to amount to 0.5% of the average net asset value of the fund. This amount is also an estimate and can be exceeded if additional costs are documented. The fund will only bear the actual costs, be they higher or lower than the maximum amount.

The Company shall receive a fee customary in the market for the initiation, preparation and execution of securities lending transactions and repurchase agreements. This fee is up to one-third of the gross income from these transactions.

Additional costs may be incurred in connection with securities lending transactions and repurchase agreements, such as:

- Depositary fees;
- account fees in line with normal banking practice (including, where applicable, normal costs for holding foreign securities in custody abroad);
- fees payable to external service providers engaged by the Company to conduct the transactions (see also the section on securities lending transactions and securities repurchase agreements earlier in this sales prospectus).

These additional transaction costs are borne by the Company.

Fees and reimbursements of expenses from the fund to the Company, the Depositary and third parties are subject to the approval of BaFin.

Performance-based fee

The Company may additionally receive a performance-based fee for its management of the fund.

a) Definition of the performance-based fee:

The Company may, for its management of the fund, receive a performance-based fee of up to 20% (maximum amount) of the amount by which the net asset value per unit outperforms the benchmark at the end of a settlement period (benchmark outperformance); such amount shall, however, not exceed 4% of the average net asset value of the fund during the settlement period based on the value determined each exchange trading day.

The following additional expenses may also be charged to the fund:

- fund mergers and
- measures taken in connection with computation errors in the determination of the net asset value per unit, or in cases of investment limit violations.
If the net asset value per unit underperforms the benchmark at the end of a settlement period (benchmark underperformance) the Company shall receive no performance-based fee. In a manner corresponding to the calculation of the performance-based fee for benchmark outperformance, the negative amount for each net asset value per unit is calculated based on the benchmark underperformance and carried forward to the next settlement period (negative carryforward). There is no maximum limit on the negative carryforward. The Company shall receive a performance-based fee for the subsequent settlement period only if the amount calculated from the outperformance of the benchmark at the end of that settlement period exceeds the negative carryforward from the previous settlement period. In this case, the fee entitlement is equal to the difference between the benchmark outperformance calculated from the benchmark underperformance does not exceed the negative carryforward from the previous settlement period, the two amounts are offset. The remaining negative amount for each net asset value per unit is again carried forward to the next settlement period as the new negative carryforward. If the result at the end of the next settlement period is yet another benchmark underperformance, the existing negative carryforward is increased by the amount calculated from this new benchmark underperformance.

When calculating the fee entitlement each year, any negative carryforwards from the previous five settlement periods are taken into account. If there are fewer than five previous settlement periods for the fund, all previous settlement periods are taken into account.

b) Definition of the settlement period:
The settlement period commences on October 1 and ends on September 30 of each calendar year. The settlement period may be reduced in cases such as mergers, truncated fiscal years, or the closure of the investment fund.

c) Benchmark:
The benchmark is defined as the S&P 500 less 120 basis points. If the benchmark should cease to be applicable, the Company shall specify another comparable index to take the place of the named benchmark.

d) Calculation of performance:
The performance-based fee is calculated daily and settled annually at the end of the settlement period. The performance-based fee is determined by comparing the performance of the benchmark with that of the net asset value per unit (see article 18 (1) of the General Terms and Conditions of Investment), calculated according to the BVI method (see www.bvi.de) the settlement period. The costs charged to the fund may not be deducted from the performance of the benchmark prior to comparison.

In accordance with the respective result of the daily comparison, any performance-based fee calculated is deferred in the fund for each unit issued, or an already recognized provision is reversed accordingly. Reversed provisions accrue to the fund. A performance-based fee may be withdrawn only if corresponding provisions have been recognized. The performance-based fee may be withdrawn even if the net asset value per unit at the end of the settlement period is less than the net asset value per unit at the beginning of the settlement period (negative absolute unit performance).

Circumstances particular to the acquisition of investment fund units
When investing in units of target funds, the costs of the target fund, especially the management fee / all-in fee, performance-based fees, initial sales charges and redemption fees, expense reimbursements, as well as other fees or costs payable for the target funds, are indirectly charged to the fund in full.

For affiliated target funds, the following applies:
No initial sales charges and redemption fees are charged to the fund for the acquisition or redemption of units of affiliated target funds.

When investing in affiliated target funds, the management fee / all-in fee of the target fund is charged to the fund in full (double-charging).

Exchanges and markets
The Company has no knowledge of whether the units of the fund are being traded on an exchange or organized market.

The Company may have the units of the fund admitted for listing on an exchange or traded in organized markets; currently the Company is not availing itself of this option.

The possibility of the units also being traded on an exchange cannot be ruled out.

The market price underlying exchange trading or trading in other markets is not determined exclusively by the value of the assets held in the fund. Supply and demand are also contributing factors. The market price may therefore deviate from the calculated price per unit.

Fiscal year
The fiscal year of the fund commences on October 1 and ends on September 30.

Distribution policy
Income will not be distributed for the fund, but reinvested in the fund.

Bearer units in the form of definitive securities were issued for the investment fund in the past. According to the KAGB, these definitive securities must be held in collective custody. Bearer share certificates that are still not held in collective custody by December 31, 2016, will become null and void after this date, as will the coupons not yet due (see section “Units”).

Coupons that become due before January 1, 2017, may be presented for payment of the income attributable to them at the respective paying agent. However, the amount may not be paid out in cash and must instead be credited to a domestic account of the investor.

If units are held in a custody account with the Depositary, the Depositary's branches will credit distributions free of charge. The same applies for custody accounts held at the Company and at Deutsche Bank AG and Deutsche Bank Privat- und Geschäftskunden AG. If the custody account is maintained at banks or savings banks other than the preceding, additional costs may be incurred.

Consulting firms
The Company has engaged Deutsche Bank AG, Theodor-Heuss-Allee 72, 60486 Frankfurt/Main, Germany, as investment advisor.

The investment advisor advises the Company on its investment decisions for the fund, observing the statutory and contractual investment restrictions applicable to the fund. It provides the Company with concrete investment recommendations for day-to-day implementation of the investment policy. For its investment recommendations, the investment advisor must constantly observe and analyze the capital markets and the composition of the securities portfolios and other investments of the fund. The investment advisor must inform the Company immediately about developments that have a material effect on the fund as a whole or on individual assets contained therein. The investment recommendations are not binding on the Company. The investment advisor does not have the right to place orders with regard to the fund. The investment advisor is liable to the Company for the fulfillment of its obligations. For its services, the investment advisor receives a fee customary in the market, which is included in the all-in fee.
Terms and Conditions of Investment

General Terms and Conditions of Investment

governing the legal relationship between the investors and DWS Investment GmbH, Frankfurt/Main, Germany, (hereinafter referred to as the “Company”) for the ‘Other’ investment funds managed by the Company. These General Terms and Conditions of Investment are only valid in conjunction with the Special Terms and Conditions of Investment set forth for the specific ‘Other’ investment fund.

Article 1 General principles
1. The Company is an AIF asset management company subject to the provisions of the German Investment Code (Kapitalanlagegesetzbuch, “KAGB”).
2. The Company invests the money deposited with it in its own name for the collective account of the investors in the form of an ‘Other’ investment fund pursuant to the principle of risk-spreading in assets permitted under the KAGB, but separate from its own assets. Global certificates are issued concerning the rights of the investors.
3. The legal relationship between the Company and the investor is defined by the General Terms and Conditions of Investment (“General Terms”) and the Special Terms and Conditions of Investment (“Special Terms”) of the ‘Other’ investment fund, and by the KAGB.

Article 2 Depositary
1. The Company shall appoint an institution as defined by article 80 (2) KAGB as Depositary for the ‘Other’ investment fund. The Depositary shall act independently of the Company and exclusively in the interests of the investors.
2. The functions and duties of the Depositary are defined by the Depositary agreement concluded with the Company, the KAGB and the Terms and Conditions of Investment.
3. The Depositary can outsource custody duties to another entity (“sub-depositary”) as provided for by article 82 KAGB. Additional details are contained in the sales prospectus.
4. The Depositary shall be liable to the ‘Other’ investment fund or to the investors for the loss of a financial instrument held in custody by the Depositary as defined in article 81 (1), no. 1, KAGB, or by a sub-depositary to which the custody of financial instruments was delegated according to article 82 (1) KAGB. The Depositary shall not be liable if it can prove that the loss is attributable to external events the consequences of which would have been unavoidable despite all reasonable efforts to the contrary. Additional rights arising from the provisions of civil law on the basis of contracts, or from prohibited actions, are unaffected. The Depositary shall also be liable to the ‘Other’ investment fund or to the investors for all other losses they incur as a consequence of the Depositary’s negligent or intentional violation of its obligations under the provisions of the KAGB. The liability of the Depositary shall not be affected by any delegation of custody duties according to paragraph 3, sentence 1.

Article 3 Fund management
1. The Company purchases and manages the assets in its own name for the collective account of the investors with due skill, honesty, care and diligence. In performing its functions, the Company shall act independently of the Depositary and solely in the interests of the investors.
2. The Company has the right to use the money deposited with it by the investors to purchase assets, resell them and invest the proceeds in other assets; the Company is furthermore authorized to carry out all other legal transactions arising out of the management of the assets.
3. The Company may neither grant money loans nor enter into any obligations in connection with a contract of surety or guarantee for the collective account of the investors. It may not sell assets as defined by articles 193, 194 and 196 KAGB that are not held by the ‘Other’ investment fund at the time of conclusion of the transaction. Article 197 KAGB shall remain unaffected.

Article 4 Investment principles
The ‘Other’ investment fund is invested directly or indirectly pursuant to the principle of risk-spreading. The Company shall acquire for the ‘Other’ investment fund only such assets as can be expected to generate income and/or growth. It determines in the Special Terms which assets may be acquired for the ‘Other’ investment fund.

Article 5 Securities
Unless the Special Terms provide for additional restrictions, the Company may purchase securities for the account of the ‘Other’ investment fund – subject to article 198 KAGB – only if
a) they are admitted for trading on an exchange in a member state of the European Union or in another state which is a party to the Agreement on the European Economic Area or are admitted for trading or included in another organized market in one of these states;
b) they are exclusively admitted for trading on an exchange outside the member states of the European Union or outside the other states that are parties to the Agreement on the European Economic Area or are admitted for trading or included in another organized market in one of these states, insofar as the choice of this exchange or organized market is approved by the German Federal Financial Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht, “BaFin”);
c) their admission for trading on an exchange in a member state of the European Union or in another state that is a party to the Agreement on the European Economic Area or their admission to an organized market or their inclusion in such a market in a member state of the European Union or in another state that is a party to the Agreement on the European Economic Area is to be applied for under the terms and conditions of issue, insofar as the admission or inclusion of these securities takes place within one year of issue;
d) the respective terms of issue require that their admission for trading on an exchange or on an organized market, or their inclusion in such a market, outside the member states of the European Union or outside the other states that are parties to the Agreement on the European Economic Area must be applied for, BaFin has approved of the choice of exchange or organized market and the admission or inclusion of such securities takes place within one year of their issue;
e) they are equities to which the ‘Other’ investment fund is entitled in the event of a capital increase from the issuing company’s own funds;
f) they were acquired through the exercise of subscription rights belonging to the ‘Other’ investment fund;
g) they are units of closed-end funds that meet the criteria specified in article 193 (1), sentence 1, no. 7, KAGB;
h) they are financial instruments that meet the criteria specified in article 193 (1), sentence 1, no. 8, KAGB.

The acquisition of securities according to sentence 1 (a) through (g) may take place only if the prerequisites stipulated in article 193 (1), sentence 2, KAGB are also fulfilled. Subscription rights may also be acquired if they originate from securities that may themselves be acquired under this article 5.

Article 6 Money market instruments
1. Unless the Special Terms provide for additional restrictions, the Company may, subject to article 198 KAGB, acquire for the account of the ‘Other’ investment fund instruments that are usually traded in the money market, as well as interest-bearing securities that have a residual term not exceeding 397 days at the time of acquisition for the ‘Other’ investment fund, or whose interest...

---

1 The list of exchanges is published on the BaFin Web site (http://www.bafin.de).
payments are adjusted to market circumstances regularly, although at least once every 397 days, throughout their entire term, pursuant to the terms and conditions of issue or whose risk profile corresponds to the risk profile of such securities (money market instruments).

Money market instruments may be acquired for the ‘Other’ investment fund only if

a) they are admitted for trading on an exchange in a member state of the European Union or in another state that is a party to the Agreement on the European Economic Area or are admitted for trading or included in another organized market in such a member state;
b) they are exclusively admitted for trading on an exchange outside the member states of the European Union or outside the other states that are parties to the Agreement on the European Economic Area or are admitted for trading or included in another organized market in such a country, insofar as the choice of this exchange or organized market is approved by BaFin;
c) they are issued or guaranteed by the European Union, the German federal government, a special-purpose vehicle of the German federal government, a German federal state, another member state or another central, regional or local authority or the central bank of a member state of the European Union, the European Central Bank or the European Investment Bank, a third country or, in the case of a federal state, by one of the members making up the federation, or by a public international body of which one or more member states of the European Union are members;
d) they are issued by a company whose securities are traded in the markets specified in (a) and (b) above;
e) they are issued or guaranteed by a credit institution that is subject to supervision according to criteria defined in European Union legislation, or by a credit institution that is subject to and complies with prudential rules considered by BaFin to be equivalent to those of European Union legislation; or
f) they are issued by other issuers and those issuers meet the requirements under article 194 (1), sentence 1, no. 6, KAGB.

2. Money market instruments as defined in paragraph 1 may be acquired only if they fulfill the respective prerequisites of article 194 (2) and (3) KAGB.

Article 7 Bank balances

The Company may, for the account of the ‘Other’ investment fund, hold bank balances having a term not exceeding twelve months. Such balances shall be kept in blocked accounts at a credit institution having its registered office in a member state of the European Union or in another state that is a party to the Agreement on the European Economic Area, or else in a third country whose prudential rules are considered by BaFin as equivalent to those stipulated in European Union legislation. Unless the Special Terms provide otherwise, the bank balances may also be denominated in foreign currencies.

Article 8 Investment fund units

1. Unless the Special Terms provide otherwise, the Company may acquire units of investment undertakings according to Directive 2009/65/EC (the UCITS Directive) for the account of the ‘Other’ investment fund. Units and shares of other domestic investment funds and investment stock corporations with variable capital, as well as units of open-ended EU AIFs and foreign open-ended AIFs may be acquired if they fulfill the requirements of article 196 (1), sentence 2, KAGB.

2. Unless the Special Terms provide otherwise, the Company may additionally acquire units of retail investment funds according to articles 218 and 219 KAGB (‘Mixed’ investment funds), shares of investment stock corporations with variable capital whose articles of incorporation provide for an investment form comparable to that of a ‘Mixed’ investment fund, and units or shares of corresponding EU investment undertakings or foreign AIFs.

3. The Company may acquire units of investment undertakings pursuant to paragraphs 1 and 2 only if the terms and conditions of investment or the articles of incorporation of the asset management company, the investment stock corporation with variable capital, the EU investment undertaking, the EU management company, the foreign AIF or the foreign AIF management company stipulate that no more than 10% of their net assets in total may be invested in units and shares of other investment funds, investment stock corporations with variable capital, open-ended EU investment undertakings or foreign open-ended AIFs.

4. Unless the Special Terms provide otherwise, the Company may additionally acquire units of retail investment funds according to articles 220 through 224 KAGB (‘Other’ investment funds), shares of investment stock corporations with variable capital whose articles of incorporation provide for an investment form comparable to that of an ‘Other’ investment fund, and units or shares of comparable EU or foreign AIFs.

5. Units or shares of investment undertakings in accordance with paragraph 4 may only be acquired if their assets are held in custody by a depositary or if the depositary’s functions are exercised by another comparable institution, and to the extent these investment undertakings do not in turn invest their funds in units or shares of other ‘Other’ investment funds or corresponding EU AIFs or foreign AIFs. The Company may not invest in units of foreign open-ended investment undertakings from countries that do not cooperate in combating money laundering as defined in international agreements.

6. In addition, the ‘Other’ investment fund may hold units or shares of the following investment undertakings, provided that these units or shares were permissibly acquired before July 22, 2013, according to the regulations set forth below:

a) real estate investment funds according to article 66 of the amended Investment Act in effect through July 21, 2013 (“InvG”) (even after their conversion to the KAGB), as well as comparable EU or foreign investment undertakings;

b) investment funds with additional risks according to article 112 InvG and/or shares of investment stock corporations whose articles of incorporation provide for an investment form comparable to that of article 112 InvG (even after their conversion to the KAGB), as well as EU or foreign investment undertakings comparable to such investment undertakings.

Article 9 Derivatives

1. Unless the Special Terms provide otherwise, the Company may employ derivatives and financial instruments with derivative components as part of the management of the ‘Other’ investment fund. Depending on the type and volume of the derivatives and financial instruments with derivative components employed, the Company may use either the simple or the qualified approach as defined by the Regulation on Risk Management and Risk Measurement when using Derivatives, Securities Loans and Repurchase Agreements in Investment Undertakings according to the German Investment Code (“Derivatives Regulation” or “Derivate”) issued pursuant to article 197 (3) KAGB to determine the extent to which the market risk limit for the use of derivatives and financial instruments with derivative components set in accordance with article 197 (2) KAGB has been reached; details are specified in the sales prospectus.

2. If the Company uses the simple approach, it may employ regularly the following types of derivatives and financial instruments with derivative components or combinations of these derivatives, financial instruments with derivative components and underlyings permissible under article 197 (1), sentence 1, KAGB in the ‘Other’ investment fund. Complex derivatives based on underlyings permissible under article 197 (1),

---

2 The list of exchanges is published on the BaFin Web site (http://www.bafin.de).
The standard derivatives are:

a) Futures contracts on the underlyings according to article 197 (1) KAGB, with the exception of investment fund units according to article 196 KAGB;

b) Options or warrants on the underlyings according to article 197 (1) KAGB, with the exception of investment fund units according to article 196 KAGB, and on futures contracts according to (a) hereof, if they have the following characteristics:
   aa) the option may be exercised either during the entire term or at the end of the term;
   and
   bb) at the time the option is exercised, its value depends directly on the positive or negative difference between the strike price and the market price of the underlying, and becomes zero if the difference has the opposite sign;

c) interest rate swaps, currency swaps, or interest rate/currency swaps;

d) options on swaps as defined in (c) hereof, provided they have the characteristics defined in (aa) and (bb) of (b) above (swaptions);

e) single-name credit default swaps.

3. If the Company uses the qualified approach, it may – provided an appropriate risk management system is in place – invest in any and all types of financial instruments with a derivative component or in derivatives.

In these cases, the value-at-risk amount attributable to the ‘Other’ investment fund for the market risk exposure (“VaR amount”) may at no time exceed twice the value-at-risk amount for the market risk exposure of the associated reference portfolio according to article 9 DerivateV. Alternatively, the VaR amount may at no time exceed 20% of the ‘Other’ investment fund’s assets.

4. In these transactions, the Company may not deviate under any circumstances from the investment principles and investment limits specified in the Terms and Conditions of Investment or from those specified in the sales prospectus.

5. The Company will employ derivatives and financial instruments with derivative components for hedging purposes, for efficient portfolio management, and for achieving additional income, if and to the extent that it considers this advisable in the interests of the investors.

6. In determining the market risk limit for the use of derivatives and financial instruments with derivative components, the Company may at any time switch between the simple and qualified approach in accordance with article 6, sentence 3, DerivateV. The switch does not require approval by BaFin; however, the Company must inform BaFin immediately of the change and publish it in the next semiannual or annual report.

7. The Company will comply with the DerivateV whenever it uses derivatives and financial instruments with derivative components.

**Article 10 Other investment instruments**

1. The Company may invest for the account of the ‘Other’ investment fund in
   a) equity interests in corporations, provided these ownership interests were permissibly acquired before July 22, 2013, and their market value can be determined; and
   b) other investment instruments according to article 198 KAGB.

2. For the account of the ‘Other’ investment fund, the Company may acquire precious metals in accordance with article 221 (1), no. 3, KAGB and non-secured loans in accordance with article 221 (1), no. 4, KAGB.

**Article 11 Investment limits**

1. In its management, the Company must comply with the limitations and restrictions specified in the KAGB, the DerivateV and in the Terms and Conditions of Investment.

2. The Company may invest no more than 30% of the ‘Other’ investment fund’s assets in units or shares of other ‘Other’ investment funds or those of corresponding EU AIFs or foreign AIFs. The units or shares that the ‘Other’ investment fund holds pursuant to article 8 (b) shall be included in this limit. The Company may invest in no more than two investment undertakings in accordance with article 8 (4) from the same issuer or fund manager for the account of the ‘Other’ investment fund.

3. The Company must ensure that the proportion of precious metals, derivatives and non-secured loans held for the account of the ‘Other’ investment fund, including those that may be acquired as ‘Other’ investment instruments as defined by article 198 KAGB, does not exceed 30% of the investment fund’s assets. Derivatives as defined by article 197 (1) KAGB are not included in this limit.

4. Investments pursuant to article 10 (1) may not exceed 20% of the ‘Other’ investment fund’s assets.

**Article 12 Merger**

1. The Company may, in accordance with articles 181 through 191 KAGB,
   a) transfer all the assets and liabilities of this ‘Other’ investment fund to another currently existing investment fund or a new one established by such transfer, or to an investment stock corporation with variable capital;
   b) transfer all the assets and liabilities of another investment fund or of an investment stock corporation with variable capital into this ‘Other’ investment fund.

2. The merger requires the approval of BaFin. The detailed procedure is governed by articles 182 through 191 KAGB.

**Article 13 Securities loans**

1. The Company may grant to a securities borrower for the account of the ‘Other’ investment fund a securities loan for indefinite or definite periods in exchange for appropriate market consideration and after provision of sufficient collateral in accordance with article 200 (2) KAGB. The market value of the securities to be transferred, together with the market value of the securities already transferred as a securities loan for the account of the ‘Other’ investment fund to the same securities borrower, including affiliated companies as defined by article 290 of the German Commercial Code, may not exceed 10% of the ‘Other’ investment fund’s assets. If a specific time is set for the return of the securities, such return must be due no later than 30 days after the transfer of the securities. The market value of securities to be transferred for a fixed period, together with the market value of the securities already transferred for a fixed period as a securities loan for the account of the ‘Other’ investment fund, may not exceed 15% of the ‘Other’ investment fund’s assets.

2. If collateral for the securities transferred is provided by the borrower is in the form of bank balances, such bank balances must be held in blocked custody accounts according to article 200 (2), sentence 3, no. 1, KAGB. Alternatively, the Company may avail of the option to invest such bank balances in the following assets in the currency of these balances:
   a) in high-quality bonds that have been issued by the German federal government, a German federal state, the European Union, a member state of the European Union or its local authorities, another state that is a party to the Agreement on the European Economic Area or a third country;
   b) in money market funds with short-term maturity structures corresponding to guidelines issued by BaFin on the basis of article 4 (2) KAGB;
c) by way of a reverse repurchase agreement with a credit institution that guarantees recovery of the accrued balance at all times.

The ‘Other’ investment fund is entitled to the income from the investment of the collateral.

3. The Company may also make use of an organized system for the brokerage and settlement of securities loans provided by a central depository for securities or by a different company designated in the Special Terms, whose purpose is the handling of international securities transactions for others, that does not meet the requirements of articles 200 and 201 KAGB, if protection of the investors’ interests is assured through the facilities provided by the aforementioned system.

4. Unless the Special Terms provide otherwise, the Company may also grant securities loans in relation to money market instruments and investment fund units, insofar as the ‘Other’ investment fund is permitted to acquire these assets. The provisions of paragraphs 1 through 3 shall apply accordingly in this case.

**Article 14 Repurchase agreements**

1. The Company may, for the account of the ‘Other’ investment fund, enter into securities repurchase agreements as defined by article 340b (2) of the German Commercial Code with credit institutions or financial services institutions in exchange for consideration on the basis of standardized master agreements.

2. The repurchase agreements must involve securities that may be purchased for the ‘Other’ investment fund in accordance with the Terms and Conditions of Investment.

3. The repurchase agreements may have a maximum term of 12 months.

4. Unless the Special Terms provide otherwise, the Company may also conclude repurchase agreements in relation to money market instruments and investment fund units, insofar as the ‘Other’ investment fund is permitted to acquire these assets. The provisions of paragraphs 1 through 3 shall apply accordingly in this case.

**Article 15 Borrowing**

The Company may take out short-term loans of up to 20% of the ‘Other’ investment fund’s assets for the collective account of the investors if the borrowing conditions are customary in the market, and if the Depositary grants its consent.

**Article 16 Units**

1. The units to be embodied in a global certificate are made out to bearer.

2. The units may have different configuration characteristics, especially with respect to the distribution policy, the initial sales charge, the redemption fee, the currency of the net asset value per unit, the management fee, the minimum investment or a combination of these features (unit classes). Details are set down in the Special Terms.

3. The units are transferable unless the Special Terms provide otherwise. When a unit is transferred, the rights represented by it are transferred also. The Company shall in each case consider the bearer of a share certificate to be the entitled owner.

4. The rights of investors or the rights of investors in a unit class are represented by a global certificate. It shall carry at least the handwritten or facsimile signatures of the Company and the Depositary.

There is no right to the issue of individual share certificates. If definitive securities were issued for the ‘Other’ investment fund in the past and are not held in collective custody at one of the institutions named in article 97 (1), sentence 2, KAGB by December 31, 2016, these definitive securities will become null and void after December 31, 2016. The investors’ units are instead represented by a global certificate and credited to a separate custody account at the Depositary. Upon submission to the Depositary of such null and void definitive security, the person submitting it can demand that a corresponding unit be credited to a custody account designated by and managed for that person. Definitive securities that are held in collective custody at one of the institutions named in article 97 (1), sentence 2, KAGB after December 31, 2016, can be transferred to a global certificate at any time.

**Article 17 Issue and redemption of units, suspension of redemption**

1. The number of units issued is generally unlimited. The Company reserves the right to suspend or permanently discontinue the issue of units. The issue of units may be temporarily suspended in whole or in part (such as by the introduction of upper limits). The Company shall inform investors of a suspension or permanent discontinuation of the issue of units on the Web site dws.de or, if applicable, through other media.

2. Units can be purchased from the Company, the Depositary or through an intermediary. The Special Terms may provide that units are permitted to be acquired and held only by certain investors.

3. Investors can request the redemption of units by the Company at any time, unless otherwise provided for in the Special Terms. The Company is obligated to redeem units at the applicable redemption price for the account of the ‘Other’ investment fund. Units are redeemed by the Depositary.

4. However, the Company reserves the right to suspend the redemption of units in accordance with article 98 (2) KAGB under exceptional circumstances that make a suspension appear necessary in the interests of the investors.

5. The Company shall notify investors about the suspension of the redemption of the units according to paragraph 4 and its resumption by publishing notices in the Bundesanzeiger (Federal Gazette) and, in addition, in a business publication or daily newspaper with sufficient circulation, or in the electronic information media designated in the sales prospectus. Investors shall be informed of the suspension and resumption of the redemption of units by durable medium immediately after their respective publication in the Bundesanzeiger.

**Article 18 Issue and redemption prices**

1. The issue and redemption prices of the units are based on the net asset value per unit, which is calculated from the sum of the market values of the assets owned by the ‘Other’ investment fund less its borrowings and other liabilities (the net asset value), divided by the number of units outstanding. If different unit classes are introduced for the ‘Other’ investment fund pursuant to article 16 (2), the net asset value per unit and the issue and redemption prices shall be calculated separately for each unit class.

Assets are valued in accordance with articles 168 and 169 KAGB and with the Accounting and Valuation Regulation issued under the KAGB (“KARBV”).

2. The issue price corresponds to the net asset value per unit of the ‘Other’ investment fund plus any initial sales charge specified in the Special Terms in accordance with article 165 (2), no. 8, KAGB.

The redemption price corresponds to the net asset value per unit of the ‘Other’ investment fund less any redemption fee specified in the Special Terms in accordance with article 165 (2), no. 8, KAGB.

3. The settlement date for purchases of units and redemption orders shall be no later than the valuation date following the date on which the buy order or the redemption order was received, unless the Special Terms provide otherwise.
4. The issue and redemption prices are calculated for every issue and redemption of units. Unless the Special Terms provide otherwise, the Company and the Depositary may refrain from calculating these prices on public holidays that are trading days, as well as on December 24 and December 31 of each year; details are set forth in the sales prospectus.

Article 19 Costs
The fees and other expenses that may be charged to the ‘Other’ investment fund and to which the Company, the Depositary and third parties are entitled are set forth in the Special Terms. In the case of fees as defined in sentence 1 hereof, the method of payment, their amount and the calculation that forms their basis are also specified in the Special Terms.

Article 20 Particular obligations to provide information to investors
The Company shall inform investors in accordance with article 300 and article 308 (4) KAGB. Details are set down in the Special Terms.

Article 21 Reporting duties
1. No later than six months following the close of the ‘Other’ investment fund’s fiscal year, the Company shall publish an annual report, including a statement of income and expenses, according to article 101 (1) through (3) KAGB.

2. No later than two months after the first half of the fiscal year, the Company shall publish a semiannual report according to article 103 KAGB.

3. If the right to manage the ‘Other’ investment fund is transferred to another asset management company in the course of the fiscal year, or if the ‘Other’ investment fund is merged into another investment fund or an investment stock corporation with variable capital in the course of the fiscal year, the Company must draw up an interim report dated to the key date of transfer. This report must comply with the requirements of an annual report according to article 1 paragraph 1.

4. If the ‘Other’ investment fund is liquidated, the Depositary shall prepare liquidation reports that meet the requirements of an annual report according to paragraph 1 annually and as of the date the liquidation is completed.

5. The reports are available from the Company and the Depositary and at other offices that must be specified in the sales prospectus and in the key investor information document; they are also announced in the Bundesanzeiger.

Article 22 Termination and liquidation of the ‘Other’ investment fund
1. The Company may terminate its management of the ‘Other’ investment fund by giving at least six months’ notice through an announcement in the Bundesanzeiger and in the annual or semiannual report. Investors shall be informed immediately by durable medium of a liquidation announced according to sentence 1.

2. Upon the effective termination of its management, the Company’s right to manage the ‘Other’ investment fund shall cease. In this case, the ‘Other’ investment fund, or the right to dispose of the ‘Other’ investment fund, shall pass to the Depositary, which shall liquidate it and distribute the proceeds of the liquidation to the investors. During the liquidation period, the Depositary is entitled to compensation for its liquidation activity and to reimbursement of expenses necessary for the liquidation. Upon the approval of BaFin, the Depositary may refrain from such liquidation and distribution, and instead transfer the management of the ‘Other’ investment fund to another asset management company in accordance with the existing Terms and Conditions of Investment.

3. The Company must draw up a liquidation report to the day on which its right of management ceases in accordance with article 99 KAGB; this report must comply with the requirements of an annual report according to article paragraph 1.

Article 23 Change of asset management company and Depositary
1. The Company may transfer the right to manage and dispose of the ‘Other’ investment fund to another asset management company. The transfer requires prior written approval by BaFin.

2. The approved transfer shall be announced in the Bundesanzeiger and also in the annual or semiannual report. Investors shall be informed immediately by durable medium of a transfer announced according to sentence 1. The transfer shall take effect no earlier than three months after its announcement in the Bundesanzeiger.

3. The Company may change the Depositary for the ‘Other’ investment fund. Such a change requires the approval of BaFin.

Article 24 Amendments to the Terms and Conditions of Investment
1. The Company may amend the Terms and Conditions of Investment.

2. Amendments to the Terms and Conditions of Investment require prior approval by BaFin. To the extent that the amendments according to sentence 1 above involve the ‘Other’ investment fund’s investment principles, they require the prior consent of the Company’s supervisory board.

3. All proposed amendments shall be announced in the Bundesanzeiger and, in addition, in a business publication or daily newspaper with sufficient circulation, or in the electronic information media designated in the sales prospectus. Reference to the proposed amendments and their coming into force must be made in a publication as defined in sentence 1. In the case of cost changes as defined by article 162 (2), no. 11, KAGB, of changes to the investment principles of the ‘Other’ investment fund as defined by article 163 (3) KAGB or of changes relating to significant investor rights, investors shall, at the same time the announcement according to sentence 1 is published, be informed in an understandable way by durable medium in accordance with article 163 (4) KAGB about the material contents of the proposed amendments to the Terms and Conditions of Investment and their background, and be provided with a notice on investor rights in accordance with article 163 (3) KAGB.

4. Amendments take effect no earlier than on the day after their publication in the Bundesanzeiger, with amendments to provisions concerning costs and investment principles taking effect no earlier than three months after their respective publication.

Article 25 Place of performance
The place of performance shall be the location of the registered office of the Company.
Special Terms and Conditions of Investment

governing the legal relationship between the investors and DWS Investment GmbH, Frankfurt/Main, Germany, (hereinafter referred to as the "Company") for the ‘Other’ investment fund

managed by the Company. These Special Terms and Conditions of Investment are only valid in conjunction with the General Terms and Conditions of Investment laid down by the Company.

Investment principles and investment limits

Article 26 Assets

The Company may acquire only the following assets for the ‘Other’ investment fund:

1. securities according to article 193 KAGB,
2. money market instruments according to article 194 KAGB,
3. bank balances according to article 195 KAGB,
4. units or shares of investment undertakings according to articles 196, 218 and 220 KAGB and of corresponding EU AIFs or foreign AIFs,
5. derivatives according to article 197 KAGB, which shall not be subject to the restrictions on acquisition of article 197 (1) KAGB,
6. ‘Other’ investment instruments according to article 198 KAGB,
7. precious metals and non-securitized loans.

Article 27 Investment limits

1. At least 51% of the ‘Other’ investment fund’s assets are invested in equities of U.S. issuers or in companies having their principal business activity in the United States, in investment funds that in turn invest at least 51% of their assets in equities as defined above, or in certificates whose underlyings are equities as defined above or U.S. equity indices or equity baskets of issuers as defined above.

2. Up to 100% of the ‘Other’ investment fund’s assets may be invested in securities as defined above.

Of this amount,

- up to 20% may be invested in fixed rate and floating rate securities, convertible bonds, warrant-linked bonds and dividend-right certificates, certificates on investments whose underlyings are bonds, as well as asset-backed securities, including mortgage-backed securities;
- up to 15% may be invested in certificates on commodities and commodity indices.

3. Up to 20% of the ‘Other’ investment fund’s assets may be invested in money market instruments according to article 26, no. 2.

4. Up to 20% of the ‘Other’ investment fund’s assets may be held as bank balances according to article 26, no. 3.

5. Up to 100% of the ‘Other’ investment fund’s assets may be invested in investment fund units and in shares of investment stock corporations whose terms and conditions of investment or articles of incorporation and by-laws correspond to articles 192 to 213 KAGB, in investment fund units and units in UCITS, and in the corresponding foreign open-ended investment fund units and shares according to article 26, no. 4, in conjunction with article 196 KAGB.

6. Up to 100% of the ‘Other’ investment fund’s assets may be invested in units of ‘Mixed’ investment funds and in shares of investment stock corporations whose terms and conditions of investment or articles of incorporation and by-laws correspond to articles 218 and 219 KAGB, as well as in the corresponding EU investment undertakings and foreign AIFs according to article 26, no. 4.

7. A total of up to 30% of the ‘Other’ investment fund’s assets may be invested in any and all types of swaps, credit default swaps, forwards, futures, options and swaptions according to article 26, no. 5, in the precious metals copper, silver, gold, ruthenium, rhodium, palladium, osmium, iodium, platinum and mercury according to article 26, no. 7 as well as in non-securitized loans according to article 26, no. 7. Non-securitized loans can be acquired in the form of standardized consumer credit or corporate loans. There are no restrictions concerning the type of collateralization. Loan portfolios as well as individual loans may be acquired. Derivatives as defined by article 197 (1) KAGB are not included in this limit.

8. A total of up to 20% of the ‘Other’ investment fund’s assets may be invested in other investment instruments according to article 26, no. 6, as well as in shares of businesses according to article 27 (10) that are not admitted for trading on an exchange or included in an organized market and were acquired before July 22, 2013.

9. Up to 30% of the ‘Other’ investment fund’s assets may be invested in units of ‘Other’ investment funds.

In the selection of units of these investment funds, the Company focuses on the sales documentation made available, as well as on the past price performance of these investment funds.

a) ‘Other’ investment funds

‘Other’ investment funds in this respect are:

- ‘Other’ investment funds and/or investment stock corporations whose terms and conditions of investment or articles of incorporation and by-laws correspond to articles 220 to 224 KAGB.
- EU investment undertakings whose investment policies make them subject to requirements comparable to those of German ‘Other’ investment funds.
- Foreign AIFs whose investment policies make them subject to requirements comparable to those of German ‘Other’ investment funds.

‘Other’ investment funds must

- have their assets held in custody by a depositary or have the function of the depositary discharged by another comparable institution.
- have regulations governing borrowing.

‘Other’ investment funds may pursue all of the investment strategies permissible under article 221 KAGB. There are no restrictions.

b) Investment funds with additional risks (hedge funds):

Notwithstanding article 221 KAGB, and in accordance with article 349, nos. 2 to 4, KAGB and article 8 (1) (b) of the General Terms, the ‘Other’ investment fund may continue to hold units of investment funds with additional risks that were launched pursuant to article 112 InvG and shares of investment stock corporations whose articles of incorporation and by-laws provide for an investment form comparable to that of article 112 InvG and were launched accordingly, as well as units or shares of EU AIFs or foreign AIFs comparable to article 349, no. 2 or no. 3, KAGB, provided that these units or shares were acquired before July 22, 2013.

Hedge funds in this respect were:

- Investment funds with additional risks and/or investment stock corporations whose articles of incorporation and by-laws or terms and conditions of investment corresponded to articles 112 et seq. InvG (German single hedge funds).
Hedge funds (target funds) had to

- manage profits from both rising and falling markets.
- evaluate the effects of such events with the objective of generating profits from both rising and falling markets.
- pursue strategies that are oriented toward significant gains.
- pursue strategies that are oriented toward significant gains.

Global macro

- Global macro target fund managers can employ strategies that are oriented toward significant economic or political events that may, for example, influence developments in the interest rate markets or in other financial markets. They analyze the effects of such events with the objective of generating profits from both rising and falling markets.
- Portfolio analysts are responsible for evaluating and selecting assets that meet the criteria of the target fund manager, considering the objective of achieving gains.
- The target fund manager may make use of directional trading or relative-value approaches to achieve this objective. The directional trading approach also focuses on unhedged long or short positions in different markets. In contrast, the relative-value approach seeks to limit market risk to the greatest possible extent through the use of hedging transactions.
- Managed futures / CTA
- Target fund managers who use Managed futures / CTA (Commodity Trading Advisor) strategies seek to identify and take advantage of developments in the financial and commodities markets – usually with the aid of computers. Their systematic approach focuses on developments in a very large number of markets. Constant research and continuous development of trading systems are particularly important in this strategy.
- Option strategies
- In this strategy, the target fund manager works with options and seeks gains primarily through option premiums. For example, he may buy exchange-traded put options on individual European or U.S. blue-chip stocks and collect an option premium for the strike price event that occurs at the time of the option expiry. The target fund manager diversifies his position in the underlying stocks, thereby reducing the risk associated with the stock. In addition, the target fund manager's portfolio, exchange-traded put options based on an index that reflects the performance of a number of different stocks – including the stocks that underlie the equity put options, may be bought. In addition, capital invested may be leveraged through loans or through the use of derivatives.
- Convertible arbitrage
- This strategy seeks to exploit price inefficiencies between convertible securities such as convertible bonds, for example, and their corresponding stocks. The target fund manager acquires the convertible securities and takes a short position in the stocks underlying the convertible bond to reduce the risk associated with the stock. In addition, the target fund manager's investment strategy focuses on developments in the market as to the probability of a successful conclusion of the transaction. The evaluation of the market as to the probability of a successful conclusion of the transaction. The width of the spread normally reflects the evaluation of the market as to the probability of a successful conclusion of the transaction. The evaluation of the market as to the probability of a successful conclusion of the transaction.
- Relative-value approach
- The relative-value approach seeks to limit market risk to the greatest possible extent through the use of hedging transactions.

Merger arbitrage
- Merger arbitrage managers seek to take advantage of expected price differences that might arise between the current market price of securities affected by a merger, a takeover, a takeover offer or similar corporate transactions, and the price of the securities after the transaction has been completed. This normally is achieved by entering into a long position in the stock of the company being taken over and a short position in the stock of the company carrying out the takeover. The width of the spread normally reflects the evaluation of the market as to the probability of a successful conclusion of the transaction. The evaluation of the market as to the probability of a successful conclusion of the transaction. The evaluation of the market as to the probability of a successful conclusion of the transaction.
- Relative-value arbitrage
- An approach that, depending on market assessment, makes flexible use of the aforementioned arbitrage strategies. It allows for temporary concentration on one or more strategies.

Other relative-value arbitrage
- An approach that, depending on market assessment, makes flexible use of the aforementioned arbitrage strategies. It allows for temporary concentration on one or more strategies.
- Other relative-value arbitrage
- An approach that, depending on market assessment, makes flexible use of the aforementioned arbitrage strategies. It allows for temporary concentration on one or more strategies.

Fixed-income arbitrage / Credit arbitrage
- Fixed-income arbitrage and credit arbitrage are strategies in which the target fund manager primarily buys fixed-income securities he believes to be undervalued and sells securities he considers overvalued. Most of the time, relative price differences arise temporarily as a consequence of local or global events, due to transitional supply-demand imbalances or because of varying accounting standards or regulatory provisions in a particular region. Relative price differences may also arise because buyers and sellers of securities seek different investments due to risk preferences, hedging needs or investment views. Managers using these strategies are often highly leveraged in order to be able to participate appropriately in these normally very small differences.

Other relative-value arbitrage
- An approach that, depending on market assessment, makes flexible use of the aforementioned arbitrage strategies. It allows for temporary concentration on one or more strategies.

Relative-value arbitrage
- An approach that, depending on market assessment, makes flexible use of the aforementioned arbitrage strategies. It allows for temporary concentration on one or more strategies.

Event-driven arbitrage
- Event-driven arbitrage is a strategy based on events, an example being the life cycle of a company. The target fund manager invests in individual securities in which he expects corporate events to occur that he believes have not been factored into the current price. Such events may especially include various corporate transactions, such as spin-offs, mergers and acquisitions, financial reorganizations due to imminent bankruptcy or stock buybacks. The manager seeks profits in various ways, including the use of long and short positions in equities and interest-bearing securities and options.
1. The currency of the ‘Other’ investment fund is the U.S. dollar.

2. The issue and redemption prices are calculated in accordance with this accounting in U.S. dollars. Assets that are not denominated in U.S. dollars are converted into U.S. dollars at the exchange rate determined on each exchange trading day using the Thomson Reuters trading platform.

3. The required payments for the issue and redemption of units shall be made in U.S. dollars.

4. The initial sales charge is 5% of the net asset value per unit. The Company is free to charge a lower initial sales charge.

5. A redemption fee is not charged. Redemption takes place at the net asset value per unit.

Article 31 Costs and services received
1. The Company shall receive from the assets of the ‘Other’ investment fund an all-in fee of 1.2% p.a. of the annual average net asset value of the ‘Other’ investment fund, calculated based on the net asset value determined each exchange trading day (see article 18 of the General Terms). The Company has the right to collect monthly prorated advances on this fee. The following fees and expenses are included in the all-in fee, and will not be charged separately to the ‘Other’ investment fund:

   a) fee for managing the ‘Other’ investment fund (collective asset management, which particularly includes fund management, administration, cost of distribution and a service fee for reporting and analysis);

   b) Depositary fees;

   c) cash and custody account fees in line with normal banking practice (including, where applicable, normal costs for holding foreign assets in custody abroad);

   d) the costs incurred for printing and mailing the sales documentation intended for investors as required by law (annual and semiannual reports, sales prospectuses, key investor information document);

   e) the cost of announcing the annual and semiannual reports, the issue and redemption prices and (where applicable) distributions or reinvestments and the liquidation report;

   f) the cost of having the ‘Other’ investment fund audited by the external auditor of the ‘Other’ investment fund;

   g) the cost of publishing the information required for taxation and the certificate confirming that the tax information was prepared in compliance with German tax law.

2. In addition to the all-in fee payable to the Company from paragraph 1 hereof, the following additional expenses may also be charged to the ‘Other’ investment fund:

   a) taxes imposed in connection with the fees payable to the Company, the Depositary and third parties, as well as with the expenses mentioned hereafter, including taxes arising in connection with administration and custody;

   b) the costs incurred by the Company for asserting and enforcing legal claims for the account of the ‘Other’ investment fund, and for defending any claims asserted against the Company to the detriment of the ‘Other’ investment fund;

   c) the cost of informing investors by durable medium, not including the cost of informing investors by durable medium – in cases of fund mergers and – measures taken in connection with computation errors in the determination of the net asset value per unit, or in cases of investment limit violations.

3. The Company may additionally receive a performance-based fee for its management of the ‘Other’ investment fund.

   a) Definition of the performance-based fee: The Company may, for its management of the ‘Other’ investment fund, receive a performance-based fee of up to 20% (maximum) of the amount by which the net asset value per unit outperforms the benchmark at the end of a settlement period (benchmark outperformance), such amount shall, however, not exceed 4% of the average net asset value of the ‘Other’ investment fund during the settlement period based on the value determined each exchange trading day.

   b) The net asset value per unit underperforms the benchmark at the end of a settlement period (benchmark underperformance) the Company shall receive no performance-based fee. In a manner corresponding to the calculation of the performance-based fee for benchmark outperformance, the negative amount for each net asset value per unit is calculated based on the benchmark underperformance and carried forward to the next settlement period (negative carryforward). There is no maximum limit on the negative carryforward. The Company shall receive a performance-based fee for the subsequent settlement period only if the amount calculated from the outperformance of the benchmark at the end of that settlement period exceeds the negative carryforward from the previous settlement period. In this case, the fee entitlement is equal to the difference between the two amounts. If the amount calculated from benchmark outperformance does not exceed the negative carryforward from the previous settlement period, the two amounts are offset. The remaining negative amount for each net asset value per unit is again carried forward to the next settlement period as the new negative carryforward. If the result at the end of the next settlement period is yet another benchmark underperformance, the existing negative carryforward is increased by the amount calculated from this new benchmark underperformance.
When calculating the fee entitlement each year, any negative carryforwards from the previous five settlement periods are taken into account. If there are fewer than five previous settlement periods for the ‘Other’ investment fund, all previous settlement periods are taken into account.

b) Definition of the settlement period:
The settlement period commences on October 1 and ends on September 30 of each calendar year. The settlement period may be reduced in cases such as mergers, truncated fiscal years, or the closure of the ‘Other’ investment fund.

c) Benchmark:
The benchmark is defined as the S&P 500 less 120 basis points. If the benchmark should cease to be applicable, the Company shall specify another comparable index to take the place of the named benchmark.

d) Calculation of performance:
The performance-based fee is calculated daily and settled annually at the end of the settlement period. The performance-based fee is determined by comparing the performance of the benchmark with that of the net asset value per unit (see article 18 (1) of the General Terms and Conditions of Investment), calculated according to the BVI method (see www.bvi.de) the settlement period. The costs charged to the ‘Other’ investment fund may not be deducted from the performance of the benchmark prior to comparison. In accordance with the respective result of the daily comparison, any performance-based fee calculated is deferred in the ‘Other’ investment fund for each unit issued, or an already recognized provision is reversed accordingly. Reversed provisions accrue to the ‘Other’ investment fund. A performance-based fee may be withdrawn only if corresponding provisions have been recognized. The performance-based fee may be withdrawn even if the net asset value per unit at the end of the settlement period is less than the net asset value per unit at the beginning of the settlement period (negative absolute unit performance).

4. The Company shall receive for the initiation, preparation and execution of securities lending transactions and securities repurchase agreements for the account of the ‘Other’ investment fund a fee customary in the market of up to one-third of the gross income from these transactions. The Company shall bear the costs incurred in connection with the preparation and execution of such transactions, including any fees payable to third parties.

5. In addition to the aforementioned fees and expenses, the costs incurred in connection with the purchase and sale of fund assets will also be charged to the ‘Other’ investment fund.

6. The Company shall disclose in the annual report and in the semiannual report the amount of the initial sales charges and redemption fees that have been charged to the ‘Other’ investment fund, over the period covered by the report, for the acquisition and redemption of investment fund units as defined by article 196 KAGB. When acquiring units that are managed directly or indirectly by the Company itself or by another company with which the Company is affiliated through a material direct or indirect equity interest, the Company itself or the other company may not charge initial sales charges and redemption fees for acquisitions and redemptions. The Company shall disclose in the annual report and in the semiannual report the fee charged to the ‘Other’ investment fund as a management fee for the units held in the ‘Other’ investment fund by the Company itself, by another asset management company, by an investment stock corporation or by another company with which the Company is affiliated through a material direct or indirect equity interest, or by a foreign investment company, including its management company.

**Particular obligations to provide information to investors**

**Article 32  Particular obligations to provide information to investors**
The information pursuant to article 300 (1) and (2) KAGB is contained in the notes to the financial statements in the annual report. The information pursuant to article 300 (4) and article 308 (4) KAGB will be sent to investors by durable medium. The information pursuant to article 300 (4) KAGB shall additionally be published in another information medium to be designated in the sales prospectus.

**Distribution policy and fiscal year**

**Article 33  Reinvestment**
Subject to the requisite adjustment of income, the Company reinvests in the ‘Other’ investment fund the interest, dividends and other income that have accrued for the account of the ‘Other’ investment fund during the fiscal year and have not been applied to cover costs, as well as the capital gains realized during the fiscal year.

**Article 34  Fiscal year**
The fiscal year of the ‘Other’ investment fund commences on October 1 and ends on September 30.

**Article 35  Reporting duties**
In the reports to be prepared according to article 21 (1) through (3) of the General Terms, equivalent values in euro, determined based on the Thomson Reuters trading platform, will be provided for information purposes for the main line items of the investment portfolio, the statement of income and expenses, the statement of changes in net assets and the calculation of the distribution. The reports will also contain a chart showing the movement of the U.S. dollar in relation to the euro.
Summary of tax regulations of importance to investors
(subject, without limitation, to taxation in Germany)\(^1\)
(As of: May 9, 2019)

Funds organized under German law

General information

The statements on tax regulations only apply to investors who are subject, without limitation, to taxation in Germany. Investors subject, without limitation, to taxation in Germany are hereinafter also referred to as “German tax residents.” We recommend that, prior to acquiring units of the fund described in this sales prospectus, the foreign investor individually discuss with his tax advisor any possible tax consequences in his country of residence arising from the acquisition of units. Foreign investors are investors not subject, without limitation, to taxation in Germany. They are hereinafter also referred to as “non-resident taxpayers.”

The statements contained herein relate to the legal situation since January 1, 2018. Where fund units were acquired prior to January 1, 2018, additional circumstances particular to such fund investment may arise that are not described here in further detail.

As a special-purpose asset, this fund is generally exempt from corporate income tax and trade tax. It is, however, partially subject to corporate income tax on its domestic income from equity investments and on other domestic income, in the sense of the limited income tax liability, not including gains on the sale of ownership interests in corporations. The tax rate is 15%. To the extent that tax is imposed on the taxable income through withholding of investment income tax, the tax rate of 15% already includes the solidarity surcharge.

However, the investment income is taxable for the individual investor as income from capital assets, which is subject to income tax, provided that it exceeds the saver’s flat allowance of EUR 801 p.a. (for single persons or spouses assessed separately) or EUR 1,602 p.a. (for spouses assessed jointly) when added to any other investment income.

Income from capital assets is generally subject to a 25% withholding tax (plus solidarity surcharge and, where applicable, church tax). Income from capital assets is generally subject to withholding against losses and foreign withholding taxes arising from direct investment.

The withholding tax does not act as a final payment, however, if the investor’s personal tax rate is lower than the final withholding rate of 25%. In this case, income from capital assets may be declared in the income tax return. The tax office then applies the lower personal tax rate and credits the tax withheld against the personal tax liability (so-called “reduced rate test”).

If income from capital assets was not subject to any withholding (because, for example, a capital gain on the sale of fund units was realized in a foreign custody account), such income must be declared in the tax return. Within the tax assessment, any income from capital assets is then also subject to the final withholding rate of 25%, or else to the lower personal tax rate.

If units are held as business assets, the income is considered taxable as operating income.

1 Units held as personal assets
(German tax residents)

1. Distributions

Distributions of the fund are generally taxable.

If the fund meets the tax prerequisites for partial exemption of an equity fund, 30% of the distributions are tax exempt. Equity funds are investment funds that, according to their terms and conditions of investment, continuously invest more than 50% of their value or of their assets in equity capital investments.

If the fund meets the tax prerequisites for partial exemption of a balanced fund, 15% of the distributions are tax exempt. Balanced funds are investment funds that, according to their terms and conditions of investment, continuously invest at least 25% of their value or of their assets in equity capital investments.

If the fund does not meet the tax prerequisites for either an equity fund or a balanced fund, no partial exemption is applicable to the distributions.

A tax classification for partial exemption purposes of the fund or funds or sub-funds can be found in the Annex to this summary of tax regulations of importance to German investors. The classification may change for the future. In such a case, the fund unit is treated as sold and subsequently acquired on the following day with a new tax classification for partial exemption purposes, any resulting notional capital gain, however, is only taken into account once the units are actually sold.

The taxable distributions are generally subject to the 25% withholding tax (plus solidarity surcharge and, where applicable, church tax).

Tax will not be withheld if the investor is a German tax resident and submits an exemption form, provided the taxable income components do not exceed EUR 801 for separate assessment or EUR 1,602 for joint assessment of spouses.

A corresponding exemption applies if a certificate for persons who are not expected to be assessed for income tax (the so-called “non-assessment certificate”) is submitted.

If a domestic investor has units held in domestic custody, the institution maintaining the custody account, acting as the paying agent, will not withhold tax provided that, prior to the fixed distribution date, it is presented with either an exemption form conforming to the official sample document and covering an adequate amount or a non-assessment certificate issued by the tax office for a maximum of three years. In this case, the investor is credited the full amount of the distribution.

2. Advance income estimates

The advance income estimate (“Vorabpauschale”) is the amount by which the fund’s distributions within a calendar year fall short of the baseline return for that calendar year. The baseline return is determined by multiplying the redemption price of the unit at the beginning of a calendar year by 70% of the baseline interest rate, which in turn is derived from long-term government bond market yields. The baseline return is limited to the amount exceeding the difference between the first and last redemption prices determined in the calendar year plus the distributions paid during the calendar year.

For the year in which the units were acquired, the advance income estimate is reduced by one-twelfth for each full month preceding the month of acquisition. The advance income estimate is deemed to have accrued on the first workday of the following calendar year.

---

\(^1\) Article 169 (2), no. 15, of the German Investment Code: Summary of tax regulations of importance to investors and statement of whether income distributed by the investment undertaking is subject to withholding tax.
Advance income estimates are generally taxable.

If the fund meets the tax prerequisites for partial exemption of an equity fund, 30% of the advance income estimates are tax exempt. Equity funds are investment funds that, according to their terms and conditions of investment, continuously invest more than 50% of their value or of their assets in equity capital investments.

If the fund meets the tax prerequisites for partial exemption of a balanced fund, 15% of the advance income estimates are tax exempt. Balanced funds are investment funds that, according to their terms and conditions of investment, continuously invest at least 25% of their value or of their assets in equity capital investments.

If the fund does not meet the tax prerequisites for either an equity fund or a balanced fund, no partial exemption is applicable to the advance income estimate.

A tax classification for partial exemption purposes of the fund or funds or sub-funds can be found in the Annex to this summary of tax regulations of importance to German investors. The classification may change for the future. In such a case, the fund unit is treated as sold and subsequently acquired on the following day with a new tax classification for partial exemption purposes; any resulting notional capital gain, however, is only taken into account once the units are actually sold.

The taxable advance income estimates are generally subject to the 25% withholding tax (plus solidarity surcharge and, where applicable, church tax). Tax will not be withheld if the investor is a German tax resident and submits an exemption form, provided the taxable income components do not exceed EUR 801 for separate assessment or EUR 1,602 for joint assessment of spouses.

A corresponding exemption applies if a certificate for persons who are not expected to be assessed for income tax (the so-called “non-assessment certificate”) is submitted.

If a domestic investor has units held in domestic custody, the institution maintaining the custody account, acting as the paying agent, will not withhold tax provided that, prior to the aforementioned receipt date, it is presented with either an exemption form conforming to the official sample document and covering an adequate amount or a non-assessment certificate issued by the tax office for a maximum of three years. No tax is withheld in this case. Otherwise, the investor must provide the domestic institution maintaining the custody account with the amount of tax to be withheld. For this purpose, the institution maintaining the custody account may withdraw the amount of tax to be withheld from a cash account held at the institution in the name of the investor without the consent of the investor. If the investor does not object before the advance income estimate is deemed received, the institution maintaining the custody account may also withdraw the amount of tax to be withheld from a cash account in the name of the investor to the extent that an overdraft facility agreed with the investor for this account has not been utilized. If the investor fails to comply with its obligation to provide the domestic institution maintaining the custody account with the amount of tax to be withheld, the institution maintaining the custody account must inform its competent tax office accordingly. In this case, the unreported advance income estimate must be declared in the investor’s income tax return.

3. Capital gains at investor level

If units of the fund are sold after December 31, 2017, the capital gain is subject to the final withholding rate of 25%. This applies both for units acquired before January 1, 2018, and deemed sold as of December 31, 2017, and repurchased as of January 1, 2018, and for units acquired after December 31, 2017.

If the fund meets the tax prerequisites for partial exemption of an equity fund, 30% of the capital gains are tax exempt. Equity funds are investment funds that, according to their terms and conditions of investment, continuously invest more than 50% of their value or of their assets in equity capital investments.

If the fund meets the tax prerequisites for partial exemption of a balanced fund, 15% of the capital gains are tax exempt. Balanced funds are investment funds that, according to their terms and conditions of investment, continuously invest at least 25% of their value or of their assets in equity capital investments.

If the fund does not meet the tax prerequisites for either an equity fund or a balanced fund, no partial exemption is applicable to the capital gains.

A tax classification for partial exemption purposes of the fund or funds or sub-funds can be found in the Annex to this summary of tax regulations of importance to German investors. The classification may change for the future. In such a case, the fund unit is treated as sold and subsequently acquired on the following day with a new tax classification for partial exemption purposes; any resulting notional capital gain, however, is only taken into account once the units are actually sold.

In the case of gains on the sale of units acquired before January 1, 2018, and deemed sold as of December 31, 2017, and repurchased as of January 1, 2018, it must be noted that, at the time of the actual sale, the gains on the notional sale that took place as of December 31, 2017, are also taxable if the units were in fact acquired after December 31, 2008. No partial exemption is applied to these gains resulting from the notional sale. Changes in the value of units acquired before January 1, 2009, that occurred between the acquisition date and December 31, 2017, are tax exempt.

If the units are held in a domestic custody account, the institution maintaining the custody account withholds the tax, taking into account any applicable partial exemptions. The 25% withholding tax (plus solidarity surcharge and, where applicable, church tax) can be avoided by submitting an exemption form covering an adequate amount or a non-assessment certificate. If such units are sold by an individual investor at a loss, the amount of that loss – less any reduction based on a partial exemption – may be offset against other positive income from capital assets. If the units are held in a custody account at a domestic institution, and positive income from capital assets was generated at the same institution in the same calendar year, the institution maintaining the custody account will offset the loss.

In the case of a sale after December 31, 2017, of fund units acquired before January 1, 2009, the gain generated after December 31, 2017 is generally tax exempt for individual investors up to an amount of EUR 100,000. This exemption can only be claimed if these gains are declared to the investor’s competent tax office.

When determining the capital gain for tax purposes, the gain must be reduced by the advance income estimates applied during the holding period.

II Units held as business assets (German tax residents)

1. Tax-exempt unit class (unit class for “tax-advantaged” investors)

As explained above, the fund is partially subject to corporate income tax on certain income. However, a unit class is tax exempt if the units in a unit class may only be acquired or held by such tax-privileged investors that are a domestic corporate entity, association of persons or estate that, according to its respective articles of incorporation and by-laws, foundation deed of trust or other founding instrument, solely and directly serves non-profit, charitable or religious purposes, and is actually administered accordingly, or if it is a foundation under public law that solely and directly serves non-profit or charitable purposes, or if it is a legal entity under public law that solely and directly serves religious interests; no such refunding shall take place, however, if the units are held in a for-profit business operation. The same applies to comparable foreign investors with registered offices and administrations in a foreign country that provides official legal and recovery assistance.

A unit class is also tax exempt if the units are held solely or in addition to the above-mentioned tax-privileged investors within the framework of individual retirement arrangements or basic pensions that have been certified in accordance with the German Pension Contracts Certification Act.
The prerequisites for tax exemption of a unit class are that the investors furnish proof of their tax exemption to the fund and that the investment conditions only permit the redemption of investment units in such a unit class to the investment fund and that the transfer of investment units in such a unit class is excluded.

Furthermore, exemption from the corporate income tax paid at fund level on German dividends and on income from German dividend rights similar to equities also essentially requires that German equities and German dividend rights similar to equities were held by the fund as beneficial owner for 45 days without interruption within a period of 45 days before and after the investment income was payable, and that the minimum risk of changes in value was 70% throughout that entire 45-day period.

Tax exemption amounts that the Company receives in connection with the administration of the fund and that are attributable to income from the unit classes described above must generally be paid out to investors in those unit classes. Notwithstanding the preceding, the Company shall be entitled to transfer exemption amounts directly to the fund for the benefit of the investors in this unit class; new units will not be issued on the basis of this transfer.

Information about tax-exempt unit classes, if any, is provided in the special section of this sales prospectus and in the Special Terms and Conditions of Investment.

2. Refund of corporate income tax imposed on the fund

The corporate income tax incurred at fund level may be reimbursed to the fund for forwarding to an investor if the investor is a domestic corporate entity, association of persons or estate that, according to its respective articles of incorporation and by-laws, foundation deed of trust or other founding instrument, solely and directly serves non-profit, charitable or religious purposes, and is actually administered accordingly, or if it is a foundation under public law that solely and directly serves non-profit or charitable purposes, or if it is a legal entity under public law that solely and directly serves religious interests; no such refunding shall take place, however, if the units are held in a for-profit business operation. The same applies to comparable foreign investors with registered offices and administration in a foreign country that provides official legal and recovery assistance.

The prerequisite for this is that such an investor submits a corresponding application and that the corporate income tax is prorated over the investor’s holding period. In addition, the investor must be the legal and beneficial owner of the units for a period of at least three months before receiving the income of the fund subject to corporate income tax, and there must be no obligation to transfer the units to another person. Furthermore, with regard to the corporate income tax paid at fund level on German dividends and on income from German dividend rights similar to equities, such refunding also essentially requires that German equities and German dividend rights similar to equities were held by the fund as beneficial owner for 45 days without interruption within a period of 45 days before and after the investment income was payable, and that the minimum risk of changes in value was 70% throughout that entire 45-day period.

The corporate income tax incurred at fund level may also be refunded to the fund for forwarding to an investor if the units in the fund are held within the framework of individual retirement arrangements or basic pensions that have been certified in accordance with the German Pension Contracts Certification Act. This requires the provider of an individual retirement arrangement or basic pension contract to inform the fund within one month of the fund’s fiscal year-end at which points in time and in what amounts units were acquired or sold. The aforementioned 45-day rule must additionally be taken into account.

There is no obligation on the part of the fund or the Company to have the corresponding corporate income tax refunded for forwarding to the investor. In particular, the fund or the Company can make the application for such a refund dependent on a minimum expected refund amount and/or on an agreement for reimbursement of expenses by the investor.

Given the elevated complexity of this rule, it may be beneficial to consult with a tax advisor.

3. Distributions

Distributions of the fund are generally subject to individual or corporate income tax and to trade tax.

If the fund meets the tax prerequisites for partial exemption of an equity fund, 60% of the distributions are tax exempt for income tax purposes, and 30% for trade tax purposes, if the units are held by natural persons as business assets. For taxable corporate entities, 80% of the distributions are tax exempt for income tax purposes, and 40% for trade tax purposes. For corporate entities that are life or health insurers and in which the units are attributable to investments, and for those that are credit institutions and in which the units are attributable to the trading book or were acquired with the objective of achieving a short-term gain from proprietary trading, 30% of the distributions are tax exempt for corporate income tax purposes, and 15% for trade tax purposes. Equity funds are investment funds that, according to their terms and conditions of investment, continuously invest more than 50% of their value or of their assets in equity capital investments.

If the fund meets the tax prerequisites for partial exemption of a balanced fund, 30% of the distributions are tax exempt for income tax purposes, and 15% for trade tax purposes, if the units are held by natural persons as business assets. For taxable corporate entities, 40% of the distributions are generally tax exempt for corporate income tax purposes, and 20% for trade tax purposes. For corporate entities that are life or health insurers and in which the units are attributable to investments, and for those that are credit institutions and in which the units are attributable to the trading book or were acquired with the objective of achieving a short-term gain from proprietary trading, 15% of the distributions are tax exempt for corporate income tax purposes, and 7.5% for trade tax purposes. Balanced funds are investment funds that, according to their terms and conditions of investment, continuously invest at least 25% of their value or of their assets in equity capital investments.

If the fund does not meet the tax prerequisites for either an equity fund or a balanced fund, no partial exemption is applicable to the distributions.

The tax classification for partial exemption purposes of the fund or funds or sub-funds can be found in the Annex to this summary of tax regulations of importance to German investors. The classification may change for the future. In such a case, the fund unit is treated as sold and subsequently acquired on the following day with a new tax classification for partial exemption purposes; any resulting notional capital gain, however, is only taken into account once the units are actually sold.

The distributions are generally subject to the 25% withholding tax (plus solidarity surcharge).

If the tax prerequisites for an equity or balanced fund are met, the partial-exemption rate applicable for individual investors, i.e., 30% in the case of an equity fund and 15% in the case of a balanced fund, is applied consistently for withholding purposes.

4. Advance income estimates

The advance income estimate ("Vorabpauschale") is the amount by which the fund’s distributions within a calendar year fall short of the baseline return for that calendar year. The baseline return is determined by multiplying the redemption price of the unit at the beginning of a calendar year by 70% of the baseline interest rate, which in turn is derived from long-term government bond market yields. The baseline return is limited to the amount
exceeding the difference between the first and last redemption prices determined in the calendar year plus the distributions paid during the calendar year. For the year in which the units were acquired, the advance income estimate is reduced by one-twelfth for each full month preceding the month of acquisition. The advance income estimate is deemed to have accrued on the first workday of the following calendar year.

Advance income estimates are generally subject to individual or corporate income tax and to trade tax.

If the fund meets the tax prerequisites for partial exemption of an equity fund, 60% of the advance income estimates are tax exempt for income tax purposes, and 30% for trade tax purposes, if the investment fund is to be held by natural persons as business assets. For taxable corporate entities, 80% of the advance income estimates are generally tax exempt for corporate income tax purposes, and 40% for trade tax purposes. For corporate entities that are life or health insurers and in which the units are attributable to investments, and for those that are credit institutions and in which the units are attributable to the trading book or were acquired with the objective of achieving a short-term gain from proprietary trading, 30% of the advance income estimates are tax exempt for corporate income tax purposes, and 15% for trade tax purposes. Equity funds are investment funds that, according to their terms and conditions of investment, continuously invest more than 50% of their value or of their assets in equity capital investments.

If the fund meets the tax prerequisites for partial exemption of a balanced fund, 30% of the advance income estimates are tax exempt for income tax purposes, 15% for trade tax purposes, if the units are held by natural persons as business assets. For taxable corporate entities, 80% of the advance income estimates are generally tax exempt for corporate income tax purposes, and 40% for trade tax purposes. For corporate entities that are life or health insurers and in which the units are attributable to investments, and for those that are credit institutions and in which the units are attributable to the trading book or were acquired with the objective of achieving a short-term gain from proprietary trading, 30% of the capital gains are generally tax exempt for corporate income tax purposes, and 15% for trade tax purposes. The gain on the notional sale shall be determined separately for units attributable to an investor's business assets.

A tax classification for partial exemption purposes of the fund or funds or sub-funds can be found in the Annex to this summary of tax regulations of importance to German investors. The classification may change for the future. In such a case, the fund unit is treated as sold and subsequently acquired on the following day with a new tax classification for partial exemption purposes; any resulting notional capital gain, however, is only taken into account once the units are actually sold.

The advance income estimates are generally subject to the 25% withholding tax (plus solidarity surcharge).

If the fund meets the tax prerequisites for a new tax classification for partial exemption purposes during the holding period.

If the fund meets the tax prerequisites for partial exemption of an equity fund, 60% of the advance income estimates are tax exempt for income tax purposes, and 30% for trade tax purposes, if the units are held by natural persons as business assets. For taxable corporate entities, 80% of the capital gains are generally tax exempt for corporate income tax purposes, and 40% for trade tax purposes. For corporate entities that are life or health insurers and in which the units are attributable to the trading book or were acquired with the objective of achieving a short-term gain from proprietary trading, 30% of the capital gains are tax exempt for corporate income tax purposes, and 15% for trade tax purposes. Equity funds are investment funds that, according to their terms and conditions of investment, continuously invest more than 50% of their value or of their assets in equity capital investments.

If the fund meets the tax prerequisites for partial exemption of a balanced fund, 30% of the capital gains are tax exempt for income tax purposes, and 15% for trade tax purposes, if the units are held by natural persons as business assets. For taxable corporate entities, 40% of the capital gains are generally tax exempt for corporate income tax purposes, and 20% for trade tax purposes. For corporate entities that are life or health insurers and in which the units are attributable to investments, and for those that are credit institutions and in which the units are attributable to the trading book or were acquired with the objective of achieving a short-term gain from proprietary trading, 30% of the capital gains are tax exempt for corporate income tax purposes, and 15% for trade tax purposes. Equity funds are investment funds that, according to their terms and conditions of investment, continuously invest more than 50% of their value or of their assets in equity capital investments.

If the fund does not meet the tax prerequisites for either an equity fund or a balanced fund, no partial exemption is applicable to the advance income estimate.

The gains on the sale of the units are generally subject to withholding of investment income tax.

It is assumed that units are held in custody in Germany. A surtax called the "solidarity surcharge" is levied on investment income tax, individual income tax and corporate income tax. To obtain exemption from withholding of investment income tax, it may be necessary to submit certificates to the institution maintaining the custody account in sufficient time.
III Non-resident taxpayers

If a non-resident taxpayer has the fund units held in custody by a domestic institution, no tax will be withheld on distributions, advance income estimates and the from the sale of the units, provided that the taxpayer submits proof of non-resident status. If the institution maintaining the custody account is not aware of the investor’s non-resident status, or if such status is not verified in time, the foreign investor has no option but to apply for a refund of the tax withheld as provided for by the German Fiscal Code. The tax office of the institution maintaining the custody account will be responsible for processing such a refund application.

IV Solidarity surcharge

A solidarity surcharge of 5.5% is levied on the amount of tax to be withheld from distributions, advance income estimates and gains on the sale of units.

V Church tax

Provided that income tax is already being withheld by a domestic institution maintaining the custody account (withholding agent), the attributable church tax is regularly levied as a surcharge on the tax withheld at the church tax rate of the religious group to which the church tax payer belongs. The deductibility of the church tax as a special expense is taken into account and used to reduce withholding.

VI Foreign withholding tax

Local withholding tax is in some cases retained at source on fund income generated abroad. Such withholding tax cannot be taken into account to reduce the tax liability of investors.

VII Consequences of merging investment funds

In cases where a domestic investment fund is merged into another domestic investment fund to which the same partial-exemption rate is applicable, unrealized gains will not be disclosed either at the level of the investors or at the level of investment funds involved, i.e., such a transaction is tax neutral. If the investors in the transferring investment fund receive a cash payment provided for in the merger plan, such payment shall be treated like a distribution.

If the applicable partial-exemption rate of the transferring investment fund is different from that of the receiving investment fund, the unit of the transferring investment fund is treated as sold, and the unit of the receiving investment fund is treated as acquired. The gain on the notional sale is only deemed to have accrued once the unit of the receiving investment fund is actually sold. Once the notional acquisition has taken place, the partial-exemption rate of the receiving investment fund shall be applied.

VIII Special notice for German tax residents using foreign custody accounts

Particular circumstances must be taken into account by German investors holding units of the fund in a foreign custody account. In particular, the foreign institution maintaining the custody account will not withhold tax. This means that German tax residents must declare in their tax returns all distributions, advance income estimates and gains realized on the sale of units (regarding the calculation of capital gains, see points I. 3 and II. 4 above, respectively). It must be noted here that distributions and advance income estimates must be declared in the tax return every year.

Given the transitional provisions to the legal situation applicable since January 1, 2018, a large number of particular circumstances must be considered (e.g., any inflow of income equivalent to distributions as of December 31, 2017 based on the (short) fiscal year applicable for tax purposes and/or any inflow of taxable capital gains on the sale of units applicable as of December 31, 2017, in the context of the actual unit sale).

If foreign custody accounts are to be used, we recommend that, prior to acquiring units of the fund described in this sales prospectus, investors consult their tax advisor and individually clarify any possible tax consequences arising from the acquisition of units.

IX Automatic exchange of information in tax matters

The importance of automatic exchange of information as a means to combat cross-border tax fraud and tax evasion has greatly increased in recent years at international level. In response, the OECD published its Common Reporting Standard (hereinafter “CRS”), a global standard for automatic exchange of financial account information in tax matters. The CRS was integrated into EU law at the end of 2014 by way of Council Directive 2014/107/EU of December 9, 2014, amending Directive 2011/16/EU as regards mandatory automatic exchange of information in the field of taxation. The participating jurisdictions (all EU member states and a number of third countries) are now applying the CRS. Germany has transposed the CRS into German law with the Financial Account Information Exchange Act of December 21, 2015.

Under the CRS, reporting financial institutions (primarily credit institutions) are required to collect specific information about their clients. If these clients (natural persons or legal entities) are reportable persons (not including, for example, corporations or financial institutions listed on an exchange) resident in other participating jurisdictions, their cash and custody accounts are classified as reportable accounts. Reporting financial institutions will then communicate certain information to their home tax authorities for each reportable account. These then communicate the information to the home tax authority of the client.

The information to be communicated is essentially the personal data of the reportable client (name; address; tax identification number; date and place of birth; jurisdiction of residence), as well as information about the cash and custody accounts (e.g., account number; account balance or value; total gross amount of interest; dividend or investment fund distribution income); total gross proceeds from the sale or redemption of financial assets (including fund units).

Specifically affected, therefore, are reportable investors holding a cash and/or custody account with a credit institution established in a participating jurisdiction. German credit institutions will therefore report information about investors resident in other participating jurisdictions to the Federal Tax Office, which in turn will forward the information to the respective tax authorities of the investors’ jurisdictions of residence. Conversely, credit institutions in other participating jurisdictions will report information about investors resident in Germany to their respective home tax authority, which in turn will forward the information to the Federal Tax Office. It is ultimately conceivable that credit institutions established in other participating jurisdictions will report information about investors that are resident in still other participating jurisdictions to their respective home tax authority, which in turn will forward the information to the respective tax authorities of the investors’ jurisdictions of residence.

General note

The information provided here is based on our understanding of current tax laws. It is addressed to persons subject, without limitation, to individual or corporate income tax in Germany. However, no responsibility can be assumed for potential changes in the tax structure through legislation, court decisions or the orders of the tax authorities.
